MEMORIAL EDITION

# VINTAGE AMERICAN POCKET WATCHES DIALS AND CASES

## IDENTIFICATION AND PRICE GUIDE

400 MILLION AMERICAN POCKET WATCHES IDENTIFIED AND VALUED
(BEGINNING TO END... 1830-2009)

THE MOST COMPREHENSIVE POCKET WATCH BOOK EVER PUBLISHED * 11,000 ALPHABETICAL LISTINGS* 1000 EA MODEL DECISION DRAWINGS* QUICK ACCURATE IDENTIFICATION AND CURRENT VALUES FOR ANY AMERICAN POCKET WATCH - FROM COLONIAL TO DOLLAR AND RARE TO COMMON* MANY PREVIOUSLY UNLISTED WATCHES INCLUDE RAILROAD MARKED PRIVATE LABEL - PROTOTYPES - COMMEMORATIVE - COMIC CHARACTER* CASES & DIALS VALUED - DIAL FOOT PATTERNS AND MOVEMENT WEIGHTS* PRODUCTION DATING FOR EACH COMPANY* THOUSANDS IN USE BY COLLECTORS ALL OVER THE WORLD
FIRST PUBLISHED IN 1987

REVISED AND UPDATED 2009

**Now Includes 90 Pages in Full Color**

## POCKET WATCHES, DIALS & CASES
### Revised Edition 2009

## FOREWORD

**All watches in this book are listed alphabetically by name as it appears on movement. This book provides a means for accurate and rapid identification and valuation for any American-made jewelled or unjewelled pocket watch.**

**This book presents PICTORIAL and DESCRIPTIVE information on both FACTORY and PRIVATE-LABEL-marked AMERICAN WATCHES, presented in such a way that any watch can be identified simply by matching its back plate features and/or markings with one of the EA-NUMBERED MODEL IDENTIFICATION DRAWINGS & PICTURES, or one of the alphabetical listings.**

**This book furnishes the watch collector with a usable, accurate and definitive IDENTIFICATION and PRICE GUIDE containing over 11,000 separate listings of American watches from the rarest to the most common and representing countless hours of research by the most active and dedicated watch collectors who have generously shared their knowledge.**

# ABOUT THE AUTHORS

William Meggers and Roy Ehrhardt

## WILLIAM F. (BILL) MEGGERS, JR.

Ridgecrest, CA

William F. (Bill) Meggers, Jr. is a native of Washington, DC. During World War II he served as a Radar Mechanic with the 15th Air Force in Italy. After the war, he attended the University of Wisconsin where he received degrees in Electrical Engineering and Physics. In 1951, he joined the staff of the National Bureau of Standards as a Microwave Engineer. During the next 30 years he worked for the Bureau and then the Navy Department on research and development of missile guidance systems. In 1980, he retired from Civil Service and began to devote a major part of his time to horological interests.

His interest in the American Pocketwatch stems from an earlier interest in American railroads and the inheritance of his grandfather's railroad watch. He is the author of two NAWCC Bulletin articles: "The Jeweling of Illinois Watch Co. Movements", February, 1981, and "The Railroad-Marked Watch", February, 1982. He also is Technical Editor of "American Pocket Watch Encyclopedia and Price Guide, Volume I", co-author of "Volume II, The Illinois Watch Co.", and author of the NAWCC slide program, "An Introduction to the History and Products of the Illinois Watch Co." as well as co-author of four other slide programs on watches.

Bill and his wife, Barbara, live in Ridgecrest, California.

## ROY EHRHARDT, JR.

Kansas City, MO

Roy Ehrhardt, Jr. is well known for his publishing company, Heart of America Press, where he has published and/or authored some of the first price guides and informative books on Horology today.

Although his earlier achievements include Registered Land Surveyor and Real Estate Broker of Missouri, the field of Horology always took precedence. Roy is a Respected Fellow of the National Association of Watch and Clock Collectors (NAWCC), a member of the Kansas City Antique Watch and Clock Club and a past National Director of the NAWCC. Roy is semi-retired and devotes most of his energy to horology.

He has long been admired for his no nonsense approach in publications and special speaking programs on watches at Regionals of the NAWCC and the Kansas City Antique Watch and Clock Club. To provide an authoritative basis for these books and lectures, he maintains one of the largest private horological libraries in the world, including thousands of slides and photographs of actual watches.

Roy and family, his wife Alpha, son and daughter, Larry and Sherry, are all active writing about antiques, clocks, watches and objects vertu.

Roy and his wife Alpha, live in Kansas City, Mo.

# INTRODUCTION

## FOREWORD

The American pocket watch and the industry that created it are a unique and fascinating part of United States history which, however, have received scant attention from historians. One has only to look at the relative numbers of books written on watches and on clocks to confirm this fact.

Watches, like coins and stamps, have been collected for many years. However, until recent years collector interest in American pocket watches has been comparatively young (1850's) part of the watchmaking industry to age sufficiently. In any event, the majority of American watch collectors have entered the hobby just within the past ten to twenty years. Not surprisingly, therefore, the major books on American Watch collecting have been written in the past decades.

Despite the tremendous recent advances that have been made in documenting and classifying American Pocket watches, there remain many American watch companies about which we know little more than what we can learn from examination of their products. These undocumented companies will remain obscure, and detailed accurate knowledge of their activities and products will become increasingly difficult to develop as time passes unless and until some dedicated collectors adopt them as their own research projects.

Without the information that watch collectors have provided us, this book would be far less comprehensive and a far less useful reference book for serious watch collectors. With an eye to the future we hope that other collectors who until now have thought they had nothing to contribute will be stimulated to report their information, too.

## PREFACE TO THE SECOND EDITION

In 1987 we published the first edition of this book. In 1999, in response to innumerable requests from collectors for an updated edition, we offered the second edition. The three objectives of the second edition are: (1) To correct as many as possible errors of omission or commission that exist in the first edition. (2) To add the many hundreds of newly discovered private labels to those already documented. (3) To give each listing a unique EM identification number. These numbers occur in regular numerical sequence and should make listings much easier to locate for reference. A great many hundreds of hours have been expended to achieve these objectives and make this edition the most accurate, complete and current reference source for American pocket watch collectors.

We have been gratified by the many words of praise that are being expressed by increasing numbers of collectors as they become familiar with and use the first edition and we hope you will find this second edition to be an even more valuable reference book as you collect American pocket watches.

Although the past 25 years have produced many new books for American pocket watch collectors, all of these have fallen short of meeting the goal of the ideal collector's book; that is, to provide COMPLETE, CONCISE and CORRECT information. COMPLETE in the sense of covering all the American manufacturers; CONCISE in the sense of doing this book in a convenient size; and CORRECT in the sense that all information is soundly based.

But even the ideal collector's book is only as useful as it is useable. For the beginning collector, at least the process of identifying a pocket watch often is very much like using a dictionary to look up a word he doesn't know how to spell; and the watch that can't be identified can't be valued. To overcome this problem, we have extended use of the EA-NUMBERED MODEL IDENTIFICATION DRAWINGS & PICTURES, (EA= Ehrhardt American) first introduced in Volume II of American Pocket Watch Encyclopedia and Price Guide, to include all American pocket watches. These drawings and pictures which depict the mechanical design of the movement back plates, provide a rapid error-free means of verifying the identity of any regular factory or private label-marked American pocket watch. Once this has been done the specific value range can be quickly ascertained from the more than 13,000 separate alphabetically arranged listings.

In addition, we have added a new category of drawings and pictures. Called the ES-NUMBERED IDENTIFICATION PICTURES, (ES= Ehrhardt Swiss) this new category is designed to aid in identifying the myriad Swiss Imitation American (SIA) watches which often confuse the beginning collector because they so closely resemble the American watches. This will appear in a later edition. In order to maintain convenient size we have had to omit production quantities and any detailed historical coverage of the watch companies and the people behind them. However, abbreviated production-date tables and company name changes are included in the EA-NUMBERED MODEL IDENTIFICATION DRAWINGS & PICTURES section and historical information is available in other books and in various issues of the National Association of Watch and Clock Collectors (NAWCC) BULLETIN.

# RESEARCH CONTRIBUTORS

We'd like to take this opportunity to thank the thousands of collectors who have helped us during the past 20 years. Among the many ways of contributing was sending in serial numbers list, photographing their watches themselves or bringing their watches to Bill or Roy for photographing, discussing at length many of the watches and value, and supplying the many of the advertising cuts. We apologize for not acknowledging each one individually but the number is too great.

## HOW TO USE THIS BOOK

The primary purpose of this book is to take the guesswork out of American pocket watch identification of watches is of vital importance to every serious watch collector. However, the process is often puzzling and frustrating, particularly to the beginner, because of incomplete and often incorrect information which has appeared in some existing price guides, as well as the widespread practice of the watch industry to make watches with custom markings and even customized plate designs for many of their private label customers. Seasoned collectors usually are not bothered by these variations because they have learned to recognize the design peculiarities that are unique to each company. But the beginner often needs help when he finds a watch that is marked simply: "Made expressly for Adolf Michael" or one which is marked just with a monogram and has peculiarly shaped plates. Here for the first time is a book which provides that help.

If you are not already familiar with the manner in which information has been presented in Volumes 1, 2 and 3 of AMERICAN POCKET WATCH ENCYCLOPEDIA AND PRICE GUIDE it is advisable to turn now to page 27 and familiarize yourself with the format of and abbreviations that are used in each watch description. It will be necessary for you to be able to read these descriptions in order to be sure you have correctly identified your watch. In addition, if you are a beginning collector you may find it helpful to employ the following procedures as you identify and value your watch.

1. Open your watch case to expose the back plates of the movement and read or write down all the words and numbers that appear on the movement except for such common markings as "Fast", "Slow", "Patent Pinion", etc. but be sure to note the number of jewels, adjustment markings and "double roller" if these are present. Usually these markings are on the upper surface of the plates or bridges but occasionally they will be found under the balance wheel or between the bridges so be sure to look everywhere.

2. Unless your watch has NO name, initials or monogram on it, the next step is to attempt to match these markings with one of the more than 13,000 individual listings that are arranged in alphabetical order, beginning on page 115. This listing contains both factory and private label markings intermixed and it should be relatively easy to find your watch listed if it has been previously recorded. Factory-marked watches which bear a Grade name or numbers in addition to the watch company name can be found by looking either under the Grade marking or the factory name. In some cases different companies used some of the same Grade numbers. Therefore, if you look up the numbers be sure you find the correct factory name with it before proceeding further. All factory-marked watches and most private label-marked watches for which there are multiple listings are grouped together under their factory or private label markings. Thus, for example, all Illinois watches marked **Bunn Special** will be found together in one place as will all watches marked **Pennsylvania Special.** For ease of use each of these sections has a heading that tells how the listings are ordered and its background is shaded to differentiate it from the other listings. Watches marked just with a monogram can be difficult to read correctly. We have attempted to list these in all the possible sequences so if you don't find yours listed one way, look under the other possible arrangements before concluding that it is not listed.

3. Once you have found what you believe is the correct listing for your watch, note the EA NUMBER that appears at or near the end of the code line for that listing, just before the value figures. Next, turn to the EA-NUMBERED MODEL IDENTIFICATION DRAWINGS & PICTURES section which begins on page 32. Here each EA NUMBER and its corresponding DRAWING or PICTURE are listed in numerical sequence. Find your EA NUMBER and examine the drawing or picture to see if the arrangement and shapes of the various plates and bridges corresponds exactly to those on your watch. The drawings and pictures are ALL ARRANGED WITH THE WINDING PINION AT 12 O'CLOCK, so if your watch is stem wind, hold it with the pendant straight up, pointed to the top of the page as you match it with an EA-NUMBERED DRAWING or PICTURE. Keywind movements are always shown as if they were in a hunting case with the pendant positioned at 3 o'clock on the movement's dial. Therefore, the fourth wheel, which carries the seconds hand, will be at 9 o'clock when the movement is viewed from the back. If you are identifying a keywind watch which is in an open-face case you will have to turn it so that the pendant is pointing to the right of the page as you compare it to the EA-NUMBERED DRAWINGS & PICTURES. Otherwise, hold it as before with the pendant straight up. **The engraved or stamped markings and the style or regulator may be different but the shapes of the plates and bridges must be the same.** If they are, you have positively identified your watch as to manufacturer and model number. Some listings will have two or more code lines under them, each with a different EA NUMBER. This means that the description has been found on more than one size or model of watch. Unless you are sure which size and model is yours you may have to look at each of the corresponding DRAWINGS OR PICTURES until you find the one that matches your watch. (Measuring the size of your watch as shown on page 12 will eliminate looking at a lot of inappropriate drawings.)

4. When you have identified your watch you can return to the listing for it and ascertain its value. Values shown are for the movement only, but assume that it has the correct dial and hands. For the total value of your watch you will have to add the value of your case. (See page 22.) In addition, to understand how the values shown were obtained you must also read HOW VALUES ARE DETERMINED, page 7 .

5. In step 2 we mentioned the possibility that your watch might not have any markings on it to indicate by or for whom it was made, or it may have a marking that does not appear in the listings. In these instances you will have to proceed differently. Unless you know the manufacturer you will first have to ascertain it by going through the EA-NUMBERED MODEL IDENTIFICATION DRAWINGS or PICTURES one by one, until you find the one that matches your watch. Here again it is helpful to first determine the size of your watch and thereby eliminate from consideration most of the EA DRAWINGS & PICTURES. To do this see pages 32 to 114 .

6. Having found a DRAWING or PICTURE that matches your watch, your next step depends on whether the manufacturer shown is one of those for whom detailed serial number-grade listings are available i.e., American (Waltham), Ball, Elgin, Hamilton, Illinois, Rockford, Seth Thomas, South Bend, & United States at Marion. If your watch was made by one of these companies and you have access to their serial number-grade listing then you can look up the serial number of your watch in that listing and determine its other characteristics. Then, with this information you can find the correct listing in the alphabetical section and the corresponding value as before.

7. If no serial number-grade listing is available for your watch then you will have to take the information shown under its EA-NUMBERED MODEL IDENTIFICATION DRAWING or PICTURE and turn to the listings for that group of watches. Here, you should be ablet further refine identification by comparing in size, jewels configuration, finish, setting and adjustments.

The preceding steps will enable you to identify 99% of all American pocket watches. However, it is possible that you will at some time find that your watch is not identifiable by following these steps. Assuming that you have not overlooked something, this means either that your watch has not been previously seen and recorded by one of the researchers, or that it is not American made. If, in searching through the EA-NUMBERED MODEL IDENTIFICATION DRAWINGS & PICTURES, you were able to find one for the same size movement that very closely resembles your watch then you can arrive at an approximate value, at least, by finding a corresponding listing for that DRAWING or PICTURE which also closely matches your watch. If none of the EA-NUMBERED MODEL IDENTIFICATION DRAWINGS or PICTURES resemble your watch then in all likelihood it is foreign-made.

If you want to know the approximate age of your watch, look up the movement serial number in the production date table that appears at the beginning of each watch manufacturer's EA-NUMBERED MODEL IDENTIFICATION DRAWINGS or PICTURES. No information is available on watch case serial numbers.

A word of caution is necessary. The possibility of making a wrong identification always exists and nothing dampens a collector's enthusiasm quite so much as the discovery (too late) that he has failed to buy or sold too cheaply a rare watch which he thought was a common one. In this regard the old Chinese proverb, "One picture is worth more than ten-thousand words" certainly applies, but it is a practical impossibility to include pictures of all the rare watches in this book and most of the time a written description is adequate. Nevertheless, you should always recheck your identification to make certain that ALL the particulars of the written description and EA DRAWING agree with those of your watch and if the description includes a reference to a picture in another book you owe it to yourself to look at that illustration too.

## HOW VALUES ARE DETERMINED

We have been in close touch with watch collectors and the market at the NAWCC Regionals for the past twenty-five years. We have attended many of the NAWCC Regionals and many flea markets, antique shows, gun shows, etc. as active participants in buying, selling, trading and gathering research in preparation for this and other books. Reported here are actual sales of rare or expensive watches and averaged top sales prices for the more common types of watches. No attempt has been made to predict future values,It has always been our policy to report only what is actuallyhappening in the market place among knowledgeable collectors and dealers. Within the past two years this market place has been expanded in a significant and important way by the advent of buying and selling collectibles on the Internet. At this writing there are numerous Web Sites where watches are offered for sale or auction. Of these the eBay auction site presently is the dominant one with 200 to 300 new watches offered at auction each day. The dynamics of this new venue are completely changing the way in which pocket watches are bought and sold. In addition, many more people are buying and selling without adequate knowledge and this has created some wildly diverse prices paid for watches which heretofore had very stable prices. If a watch is auctioned on the Internet and brings a price that is greatly different from the current "book" value, hundreds of people are instantly aware of it. As a result, prices are much more volatile than they ever were before and it is impossible for any price guidebook to provide the user with up-to-date price information. At the moment eBay appears to favor the seller more than the buyer but whether this situation will always prevail remains to be seen.

No one can predict what the long-term effect of the Internet will be but it seems safe to say that watch collecting as we have known it will never be the same again. However, the most important message conveyed by the advent of the Internet market place is that **having knowledge is even more important than it was before.**

This book is not a price list but provides, instead, and indication of value. It does not tell the buyer what he or she should pay but what they might expect to buy or sell for at the retail or "top price" level. Values in this book are based on the following concept of retail value: "THE PRICE A KNOWLEDGEABLE COLLECTOR OR DEALER WHO KNOWS THE VALUE WOULD PAY". Consequently, no watch sales have been used that occurred between individuals who have no market information or perception of actual supply and demand. Prices have not been revised at the time of this writing.

As always, use the values given in this book as a guide, but more importantly, use your own judgement based on your knowledge of your particular collecting needs and circumstances. Remember, "ULTIMATELY THE PRICE YOU PAY MUST BE YOUR OWN" and that is the value of the watch to you at that particular moment.

Despite the fact that the values shown are based on sales between knowledgeable persons, there are still many watches for sale at bargain prices. In other words, many watches have not yet been "discovered" by collectors and, consequently, are available at prices far below those they will command when their real importance becomes generally known. This seeming paradox of two equally high-quality and equally rare watches bringing widely different prices affords many excellent opportunities for the collector who is willing to take the time to educate himself. Most of the information needed is available here in this book. However, the wise collector will also want to study other books such as the American Pocket Watch Encyclopedia and Price Guide, etc. (See page 243) that contain much detailed information and photographs of many watches that space would not permit including in this book. Those who will study ALL the data, not just the values shown, will be able to spot the undervalued-watches and acquire them at very modest prices relative to their eventual worth. But there are many pitfalls along this road and those who would avoid them should study very carefully the section, "What Makes an American-Made Collectible or Valuable?", beginning on page 9.

### GETTING TOP VALUE FOR YOUR WATCH

As an example, let's say you have identified your watch as an Illinois 16-size, 21-jewel, Grade "Sangamo" Model 5 watch with no special markings or finish, and with a mint dial in a 20-year yellow gold-filled case in mint condition. The book says top retail value for the movement is $175. On page 22 the case is given a value of $100. Thus, the complete watch has a book value of $275. This is the price you can expect to get if you can find a top buyer in your area or through the mail or internet. For whatever reason you have not been able to find anyone who thinks it is worth $275. The most you have been offered is $200 and it looks like that is all you can get. If you want to sell it now then the $200 is what you will have to settle for. Remember, if you are unable to get the value shown in this book for your watch, either you don't have a mint condition watch or you have not been able to find a top buyer.

The "Sangamo" Grade is easy to find a buyer for, compared to a watch with a book value of over $1,000. There are thousands of collectors ready to pay up to $100 for a watch but only hundreds ready to pay up to $1,000. Consequently, the more your watch is worth the harder it will be to find a ready buyer. But if you can afford to wait, time is on your side, sooner or later a top-price buyer will come along. If you are in a hurry though, you likely will have to settle for a lower price— perhaps as low as wholesale (half retail). Watch dealers are your best source of quick cash but seldom will they pay more than wholesale. Some, however, will sell the watch for you on consignment for a commission or 10% to 25% and this may be more advantageous to you. Otherwise, unless you have access to the Internet, local NAWCC Chapter or Regional marts are your best opportunity to locate a retail buyer or, if you are willing to go to the effort, an advertisement in the NAWCC Mart publication or local newspaper often will bring forth a top buyer. Don't overlook the possibility of trading either. Very often two collectors can make a trade that leaves both in a much better position than could have been accomplished by the exchange of money.

### SUGGESTED METHOD FOR SELLING A WATCH

If you have a low quality, mass produced 7, 11, 15, or 17-jewel "nameless numbered Grade" which has no collector interest, try to sell it among people who know nothing about pocket watches (flea markets, etc.) and ask maybe two, three or four times what this book says, and take what you can get. If you have a rare and/or high quality collectible piece then look for a buyer among knowledgeable collectors and dealers

### WHAT IS THE BEST WAY TO BUY A WATCH?

The answer to this question is: it depends. Your individual circumstances and needs will determine what is the best way for you. If you are a businessman with little time available for collecting but with a substantial budget, your best approach will be to establish a good relationship with a knowledgeable, reputable watch dealer. This will assure you of the chance to develop your collection in an orderly manner. Many dealers maintain "want lists" for their clients and many fine watches change hands through this medium without ever appearing on the dealer's regular list. The arm-chair buyer will seldom get a bargain from a dealer (although it can happen when the dealer gets outside his own area of expertise). Most of the time the buyer will be paying somewhere between low and high retail. But for the person who has more money than time this is not a major concern.

If your circumstances permit you more time than money, then as stated earlier, if you are willing to invest some of that time in acquiring the required knowledge you can do considerably better at chapter and regional NAWCC meetings, flea markets, gun, coin, and antique shows. All-line dealers at flea markets and antique shows seldom know much about watches. Consequently, they will ask $150 to $250 for an 18-size 15-jewel low quality Illinois that is really worth only $25 to $40. But they may also have a 16-size 23-jewel Grade "163-A", worth from $1000 to $1500, for $150. This is the watch you are looking for! Rare is still rare and you will have to look through a lot of worthless stuff to find these bargains but when you do the time will have been well spent.

Each issue of the NAWCC Mart publication contains offerings of watches for sale. These are of two types: offerings of a list or offerings of specific watches. Sometimes you can find a bargain here too but you will have to act fast if you want to get there before the knowledgeable dealer does. Sometimes placing an ad for a particular watch that you want will produce good results.

Lastly, surfing the Internet can produce many opportunities to buy or bid on watches; however, here you will have to be careful not to get caught up in auction fever.

Remember, no one can know everything about watches. New information is constantly being reported. Most of the time it increases the value of watches. "Knowledge" is your most "potent weapon" in your efforts to build your collection. **THE ONLY SUBSTITUTE FOR KNOWLEDGE IS MONEY.**

## WHAT MAKES AN AMERICAN-MADE POCKET WATCH COLLECTABLE OR VALUABLE?
## 30 THINGS THAT AFFECT VALUE:

1. Rarity - Supply - Demand
2. Seller's Knowledge and Needs
3. Buyer's Knowledge and Desires
4. Early Makers: Pitkin - Custer - Goddard, etc.
5. Historical - Milestone Models
6. American Watch Company (Waltham)
7. Nashua - 1859 to 1862
8. Factory Models, Samples and Fitting Pieces
9. Early Inventors - Promoters - Company Officers
10. Famous Owners
11. Horological School Watches
12. How Old? Made When? 1830-1870
13. Precision Watch Makers: Fasoldt - Potter -Reed
14. Who Made It? All watch companies are not equally collectible
15. "U.S. Watches Over 100 Years Old"
16. Low Serial Numbers - First Runs
17. Movement Quality - Jewels - Finish, etc.
18. Dial Quality - Design - Subject - Decoration
19. Case Quality - Metal - Decoration - Multicolor 20. Overall Condition
21. Original Case vs. Re-case
22. Railroad Watches
23. Railroad - Associated Names
24. Private Labels
25. Size
26. Original Box - Timing Certificates -Guarantees
27. Pretty & Running
28. Jewelry Watches
29. Attachments
30. Fad

All of the "30 Things That Affect Value", as perceived by the buyers and seller of AMERICAN-MADE watches at the time this book was published, have had an effect on the values given. After reading the brief description of each "thing" it will become evident how great is the possibility for changes in the desirability of a certain pocket watch. Some of these 30 "things" affect the value more than do others. The more "things" a watch possesses the more collectible it is sometimes said that the value is what your buyer will pay.

1. RARITY - SUPPLY - DEMAND. Rarity measures lack of supply. It causes something to have value only to the extent that it prevents demand from being satisfied. Rarity changes only when something is discovered, destroyed or created. Demand is influenced by fad, fancy, fashion and perception; it can change rapidly, depending on these factors. Value is demand first and supply second, but the perception of supply helps to determine demand. It unquestionably can be said that without demand no goods have value. Most of the following "things" play a part in creating demand for American pocket watches.

2. SELLERS KNOWLEDGE AND NEEDS. This situation probably affects more sales, both favorably and unfavorably, than any other. Does the seller have enough reliable information to feel justified in asking his price? How badly does he need to sell?

3. BUYER'S KNOWLEDGE AND DESIRES. The buyer must want, be able to pay for, and thoroughly understand what is offered for sale and believe it is worth the money. On the other hand, because the buyer may lack specific knowledge and think that the seller does not know what he is doing, he may be willing to take a chance or, if he is a true collector, he may simply want it in his collection and will not care about its actual value. Buyers come in all shapes and forms with all sorts or desires, ideas and assets. Their information is not always correct or in their favor and they are more prone to make mistakes than the sellers. The sellers have owned the watches and usually have had time to do market research,, which sometimes gives them the advantage. To pay the top price, buyers must have the desire to own the watch (based on knowledge, hopefully) and the money to buy it.

4. EARLY MAKERS: PITKIN - CUSTER - GODDARD, ETC. Watches by early makers are always very desirable and will bring high prices when matched with a knowledgeable, qualified buyer. Do not confuse early U.S. manufacturers with early jewelers who ordered contract watches from Europe.

5. HISTORICAL – MILESTONE MODELS. Most serious collectors want to have examples of Models which were technologically important in watch development, such as the 1857, 1868 and 1872 Model Waltham and the Illinois 18-size third Model. The 1857 and 1872 models were mass-produced but an example is necessary for every collection. The Illinois third Model was the first open-face watch made in United States. And, of course, there are the Hamilton and Illinois 16-size ELINVAR Models which are very popular among collectors because they marked a new era in accuracy.

6. THE AMERICAN WATCH COMPANY (WALTHAM). By displaying only this company, a museum could tell a complete history of watchmaking in the United States, including being first with practical application of most of the technical improvements. Someday, in most casual conversations among watch collectors may be heard the question, "What have you found in good American Walthams lately?"

7. NASHUA - 1859 TO 1862. Probably the single most important occurrence in U.S. watchmaking history. The Models invented at Nashua and later manufactured by the American Watch Company at Waltham established the American watch industry and overseas markets for all U.S. makers. These were the 16KW, 1860 Model and 20KW, 1862 Model; and the later development of the 1868, 1870, 1872, 1874, 1884, 1888, 1892, 1894, 1899 and 1908 Models, which were all later refinements of the original 16 and 20 size, 3/4 plate Models. The 16J, 1872 Model won most of the timing trials for ten years, beginning in 1876. Watches actually begun at Nashua can be identified by their original serial numbers which appear on the pillar plate under the dial, and back plate numbers in the range 50001-50500 for the 20KW (1862 model) and 55001-55500 for the 16KW (1860 model).

8. FACTORY MODELS, PROTOTYPES, SAMPLES & FITTING PIECES. These are usually one-of-a-kind watches that were made up as prototypes for a new factory Model or Grade, or for a prospective private label customer. Some have no serial number at all while others have a special number prefixed with a "M" for Model or "S" for Special. Also, in this category are the factory fitting pieces. These are partially completed and unfinished movements that were used as standards to compare the production movements to, when there was any question about whether a particular assembly was properly fitted. Their one-of-a-kind nature makes them hard to value.

9. EARLY INVENTORS – COMPANY OFFICERS. Any watch built for or owned by famous early names in the industry. Examples are: The members of the first Board of Directors, Department foremen, etc. The morimportant or famous the person, the more collectible the watch Documentation is essential.

10. FAMOUS OWNERS. Any watch once owned by a famous person is a more desirable collector piece. Good proof of ownership is very important. Best are an inscribed original case or an original bill of sale.

11. HOROLOGICAL SCHOOL WATCHES. Watches made by students at these school are important to some collectors. Watches by makers who went on to become famous and successful in the watch industry are more desirable, especially names like Charles De Long and Fred McIntyre. (See EA 788 thru 803)

12. HOW OLD? MADE WHEN? 1830 to 1970. Most American made watches are already old; therefore, by itself age is not one of the major factors in determining value. However, there is gradually increasing interest among collectors in the early key-wind watches because these represent the period of greatest adversity for the companies before they had perfected the art of watch manufacturing. But an English Verge Fusee made in the early 1770's is worth less than a good 1940's American railroad watch. Age becomes a factor only when comparing two watches of the same or comparable make, grade and condition.

13. PRECISION WATCHMAKERS: FASOLDT – POTTER – REED These watches were as fine as any handmade precision watches made in Europe. there is heavy competition for them, especially Fasoldt and Potter who made some of their watches in Switzerland, thereby making them desired by collector all over the world.

14. WHO MADE IT? ALL WATCH COMPANIES ARE NOT EQUALLY COLLECTABLE. Many collectors like watches from only one company. Others are regional— collecting watches from a local company such as J.P. Stevens, Atlanta, Ga; or Dudley, Lancaster, Pa., for his Masonic watches. At this point in time more people collect Illinois watches than any other single company. There are private label watches made by Illinois, such as "Ball", "Santa Fe Special" and "Burlington", "Benjamin Franklin", "InterState Chronometer" and "Ariston", which are more important to collectors than entire companies such as Trenton or New York Standard. these last two companies made only low quality watches and provide very few pieces that interest collectors. In general, the greater the variety of watches made, particularly of high quality, and the more information available, the more collectible the company.

15. "U.S. WATCHES OVER 100 YEARS OLD". As each year goes by, more and more of the early United States production becomes 100 years old. Compared to the age of items offered at so-called antique shows, watches are making a strong showing. All watches of the following companies with serial numbers under the one shown are over 100 years old: Waltham 9,000,000-ElginHoward-all Illinois 1,500,000-Rockford 414,000-Hampden 1,500,000, -Elgin 9,000,000 Hamilton 104,000 and all of the production of the following companies: Fredonia, Independent, Melrose, Tremont, Lancaster, Keystone, Aurburndale, New York, United States at Marion, N.J., Newark, and Cornell. These watches are, by definition, truly antique.

16. LOW SERIAL NUMBERS – FIRST RUNS. American Watch Co. serial numbers are considered low if under 500,000; better if under 100,000; and best under 10,000, with the closer you get to 1,000 the better. Elgins have to get under 1,000 before collectors begin paying attention. In the case of Illinois, all movements with serial numbers less than 1477 were finished during the company's first year of production but some numbers as high as 7200 also were finished that year so it is more meaningful to talk about first runs for the 18-size named Grades. Generally, however, low numbers are more highly valued.

17. MOVEMENT QUALITY – JEWELS – FINISH, ETC. All other things being equal, the most desirable American-made watches are high jewel (19 or better) with gold train wheels, gold jewel settings, ruby jewels, diamond cap jewels, gold balance screws, highly finished steel work, fine dam - askeening work on nickel plates, and tu-tone or all-over gold plating. The finer the machine work anddamaskeening, coupled with gold inlaid lettering, the better. Most railroad quality watches have one or more of the above special features but so do a number of the non-railroad Grades.

18. DIAL QUALITY – DESIGN – SUBJECT – DECORATION. The most desirable dials are pure white or ivory, double or single sunk, glass enamel porcelain. When turned to the light the surface looks like white glass. These dials were put on the finest pieces. Fancy multicolor decoration or special made dials with individual names or lodge symbols are also popular with collectors. Railroad collectors like Montgomery and Ferguson dials. Metal and hard enamel dials are generally less desirable, but some watches came only with these dials. For example, the earliest watches had only hard enamel dials and many 12-size watches had only metal dials. Condition (free of hairlines) is extremely important to the value of porcelain dials. One hairline may devalue it by fifty percent.

Since dials are readily changed, today many watches do not have the original or even a correct replacement dial. As collectors become more knowledgeable it will be increasingly important to have the correct, contemporary dial on your watch. In recent years a number of soft enamel reproduction dials have been imported from Switzerland for 16 and 18-size pocket watches; these retail for $25 to $40 each. In addition, there now are a variety of plastic dials being made in which the plastic is glued over a metal or porcelain dial that has numerous flaws. These dials can be identified by the fact that the minute marker at 45 is blue rather than black. Many such replacement dials have been used and are accepted to temporarily improve the appearance of the watch when there is no other choice, but usually at a much lower value than even a flawed original dial would command the better known makers of these were Manfred Trauring cosmopolitan watch co. beginning about 1980. S. La Rose beginning1990 and Railroad Watch Co. plastic after 1998.

19. CASE QUALITY – METAL – DECORATION – MULTICOLOR. Many times the case is much more desirable than the movement. With a few exceptions, gold watches were generally fitted with low quality movements. By weight, the value of cases from highest to lowest value are: platinum, gold, sterling silver, coin silver, gold-filled, rolled gold plate, brass, silveroid and base metal. Workmanship and actual weight are important. The more artistic and eye-pleasing the decoration the better. Initials and dedications, other than those of historical importance, hurt the value of a watch case for many collectors but do not bother others. Beautifully applied multicolor decoration adds a great deal to the value of a case. Collectors like cases with gold inlaid locomotives, sawmills, horses and other interesting subjects. Railroad watch collectors like original cases with railroad watch inspector (that is, Loaner) markings, found mostly on silveroid cases, or Railroad Brotherhood markings. Some of the quality case makers were Waltham, Roy, Ladd, Boss, Fahys, Muhr, Wadsworth, Crescent, DuBois, Solidarity, Keystone and Philadelphia. Old factory-new condition cases are very often worth twice as much as a case that is considered mint. Collectors of keywind watches are the most understanding of all watch collectors when a case shows a lot of wear. See page 22 for how to value your case.

20. OVERALL CONDITION. "Rough watches are easy to buy and hard to sell." Accept only the best condition it is feasible for you to get for your collection. Remember, a watch will never look any better than it did the first time you saw it but it may look worse! The best condition watches find ready buyers. Very old or rare watches are, of course, acceptable in whatever condition they are in when found but their value still is affected by their condition. For watches that are plentiful (production in the thousands) and where you have ample choice, only the best will do. Try not to buy or keep watches with movements that are rusty, have botched jewel settings, or scratches on the movement, unmatched plate parts, or over-cleaned or buffed pearance. Avoid also the dirty or greasy movements. It costs from $40 to $100 to clean a watch these days. Also, such contaminants often hide other non-removable blemishes. Stained or spotted plates should be avoided. Look also for hands that are matched and of the proper size and weight for the dial. Original hands are hard to find and the modern replacements are of poor quality. Dials with major defects such as multiple hairlines, bad chips, or missing pieces should be avoided unless it is a rare dial,. However, very few dials are mint and you will have to really work hard to have a collection with dials all free of hairlines. Cases should be tight with good hinges or threads, should be free of noticeable dents, and if gold filled, not showing brass.

21. ORIGINAL CASE vs. RECASE. As collectors become more sophisticated they want as many of their watches as possible to be in original cases. Study the old advertisements to determine which style case your watch would have had originally. If necessary, buy a low quality watch with a case like you want and re-case it. Many private label watches came only in private label-marked cases and for these value drops if the case is wrong. Sometimes (especially old Howard) the dial plate has been cut down in a lathe. On the same basis cases with more than one set of case screw marks are undesirable. Extra or filled keywind holes are evidence of re-case, as well as are filler rings and signs of machine work to make one or both sides of a case accept a larger movement. For the earliest movements, re-casing is becoming more acceptable if the work is professionally done in the old way on cases that are contemporary with the movement. Old, originally cased watches will increase in value faster–all other things being equal. Some collectors who are interested mostly in the watch movement prefer the original factory shipping containers or display cases for their watches.

22. RAILROAD WATCHES. Railroad quality watches have been made since 1857. Generally, they are the top Grades of all companies in both 16 and 18-size at any given time. This is the largest category of pocket watches being sought after by the most collectors. The specifications for a railroad watch must be defined for a specific time period and in later years possibly also for a particular railroad. Space is not available here to fully present and define all of the watches that, at one time or another have been accepted as "Railroad Grade". (See "Railroad Watches and Time Service" by L.W. Treiman, Bulletin of the NAWCC, October 1972.) Keeping railroad time is important to some collectors--others do not seem to care. Note: All of the known Railroad Grade watches are marked RRG before the factory Grade "name" or "number" in the code line of the listings.

23. RAILROAD-ASSOCIATED NAMES. Private label or factory Grade railroad-associated names, such as Pennsylvania Railroad, Chesapeake & Ohio, Burlington Route, Baltimore & Ohio, Rail Road King, King of the Road, Roadmaster, Railroader, Canadian Pacific Railroad, Santa Fe Route, Rio Grande Standard, Frisco Special, etc. on the movement and/or dial greatly raise the value of any watch. These watches vary in rarity from a few made to thousands made and their values vary accordingly. For more information on this subject see the article entitled "The Railroad–Marked Watch" by William F. Meggers,Jr. in the February 1982 issue of the NAWCC Bulletin. Many of these watch movements also qualify for inclusion as Railroad Grade (RRG) which, for those that do, will be found in the code line immediately before the factory grade number. (In this regard, it should be remembered that the table above shows that in 1906 such private label markings began to be outlawed.) The others range from middle quality to dollar watch quality.

These Railroad-*Marked* watches testify to the importance the railroad industry played in the development of the watch industry from 1850 to 1900. Some, like the Santa Fe Route, were official watches of their railroad. Others, like the Santa Fe Special, were sold by mail-order companies who directed their marketing toward railroad men. Still others, like the B.& O.R.R. Special, were private labels of jewelers who provided railroad watch inspection for the indicated railroad. Finally, there were the watch factory labels, such as Rail Road King, which were designed to appeal to anyone caught up in either the business or the mistique of railroading.

24. PRIVATE LABELS. See page 18 of this book.

25. SIZE. The bigger the better! 16 and 18- size are the most desirable. 12-size is now beginning to become popular. Not as much attention is paid to 8-size except in gold/and or a few rare company Grades. 0 and 6-size are collected if cases are nice and pretty enough to be worn as jewelry.

26. ORIGINAL BOX – TIMING CERTIFICATES – GUARANTEES, ETC. All of these help the value of any watch but serial numbers must be correct (matching). The more valuable the watch the more valuable the box and papers become.

27. PRETTY & RUNNING. This is where most collectors begin. Pretty and running, especially hunting-cased watches, are always saleable, especially to the public who just wants an old watch. Flea market and antique show dealers make an extra effort to have these for sale. Sometimes a P&R watch also is a rare collector piece.

28. JEWELRY WATCHES. The ladies 8-size, 1870's and 1880's gold watches and the later 6 and 0-size (or smaller) are now being used as jewelry in a limited way among the horological and antique collectors. There are some exquisite little watches being collected and worn by women. Investors also like them because they are gold, beautiful and small. The best of these— enamel, carved cases, multicolors, and precious stone decorated— are very desirable, find ready buyers and bring a lot of money when offered for sale.

29. ATTACHMENTS: CHRONOGRAPH – REPEATER – CALENDAR or WINDING INDICATOR. Very few American-made watches had complications such as chronograph or repeater or calendar attachments. Waltham explored this area in the 1870's and 1880's in an attempt to stimulate sales, and Hamilton made a Navigation watch with chronograph for the Army Air Corps during World War II. However Elgin Waltham &Rockford offered up-down or winding indicator complications on their highest quality movements. Attachments are primarily devices which were retro-fitted to movements such as the Teske, Wheeler and Chalmers patent regulators and the Abbott stem-wind attachments (for converting keywind watches). Complications always increase value. The most complicated Walthams are in the five-figure range. Winding indicators increase value from three to more than ten times, depending on make and size of the watch.

30. FAD. Fad is "jumping on the bandwagon". All collectables are influenced to some degree by fad. At the time of this writing the American railroad watch is experiencing very high popularity. Additionally, jewelers private label markings are being collected more widely than ever before. Whether these are fads or the result of heightened awareness of their importance in the watch manufacturing era remains to be seen. But the message here is not to assume that because certain kinds of watches are being eagerly sought at the moment they always will enjoy that popularity.

# TECHNICAL RESEARCH AND PRODUCTION COUNTING

There is a continuing need for collectors to do research on pocket watches. This could be on a single company, a single Model, an obscure inventor or watchmaker, etc. As you read the different sections of this book you will begin to realize the vast amount of work already done by the many people who have made important contributions to what we now know about American-made pocket watches. Nevertheless, there are still a lot of projects that need to be done and there is still time for you to contribute your findings in future volumes of this or other books. If you are interested in helping in this aspect of pocket watch collecting, write to Roy Ehrhardt, P.O. Box 9808, Kansas City, MO 64134 or to William "Bill" Selover, publisher of this book, for a list of projects that you can pick from.

Those of you who do not want to undertake a research project still can help in another way. Basically, it involves writing a complete description of every watch company for which we have no serial number list. A full description of each Private Label watch is also needed. If you now have watches that fall into this category or should you acquire them before the next book is published, you can help. Write to Roy or Bill for special forms to make it easier to report your watches. Also, clip or Xerox and send and send in any interesting articles about important horological figures or watch companies that you think will add to what has already been published and is currently available. I will report the results of all significant research in my future books, giving full credit to the researcher(s). I have outlined some of our more specific needs below.

Serial Numbers with a complete watch movement description with the code line including the EA NUMBER ( See Page 123 to 206) of the following companies.

American Watch Co. Chronographs & Repeaters (EA 35 to 350) (EA 63 to 73)
Ball (EA 130 to 156) – Warren (EA 172) – Boston (EA 173) – Bowman (EA 174)
Brown & Sharp (EA 175) – California (EA 175A) – Cornell (EA 188 & 189)
J.D. Custer (EA 202) – Fasoldt (EA 265 to 275) – E.H. Flint (EA 276)
Fredonia (EA 277 & 278) – Freeport (EA 279) – S.D. French (EA 280)
Goddard (EA 281 to 288) – J.G. Hall (EA 291) – W. Hanson (EA 328)
Howard Davis & Dennison (EA 358A) – Independent (EA 508 & 509)
J. Karr (EA 557) – Mc Intyre (EA 573) – Mozart (EA 575) – Nashua (EA 576)
New Haven (EA 627) – New York (EA 695 & 696) – Newark (EA 705 to 708)
Otay (EA 716) – Osaka (EA 717) – D.D. Palmer (EA 718) – Pitkin (EA 720 to 722)
Peoria (EA 723 & 724) – A.H. and W.C. Potter (EA 725-734) – Geo. P. Reed (EA 735-747)
Rockford Serial Numbers under 11,000 and over 824,000 (EA 750 to 777)
San Jose (EA 779) – M.S. Smith (EA 824) – South Bend – any SN over 820,000
J.P. Stevens (EA 840 to 849) – United States (EA 894 to 900) – Western (EA 922) and all American or Foreign made PRIVATE LABEL watches not in this book.

# HOW TO DETERMINE THE SIZE OF A WATCH

## HISTORY

I will write here mainly of the system used on American watches. The Lancashire Gauge (shown as American on the watch size of this page) for determining watch sizes is of English origin and is the standard commonly used by watch manufacturers of the United States. By this system one inch was taken for fall or drop (the extra width of the dial).

English-made watches were usually hinged, swing-ring in the case similar to the swing-ring in modern (1923) swing-ring cases. The top plate was made enough smaller than the pillar plate to permit the movement falling or dropping into position without coming in contact with the case center. Thus, 1 and 5/30 of an inch from the base also forms a size smaller that naught size. Howard watches used letters instead of numbers (Dennison System). Their G = 1-6/16 inch or 6 size, L = 1-11/16 inch or 16 size, N = 1-13/16 inch or 18 size, etc. The above description was taken from a 1923 Illinois Watch parts catalog. Most watch material houses have for sale for under $1.00 a small gauge showing all the Lancashire and Swiss Systems. On the bottom of this page I have drawn a gauge to scale.

LANCASHIRE SYSTEM : One inch is the base for a 6/0 Size and 1/30 inch is added for the next higher size.

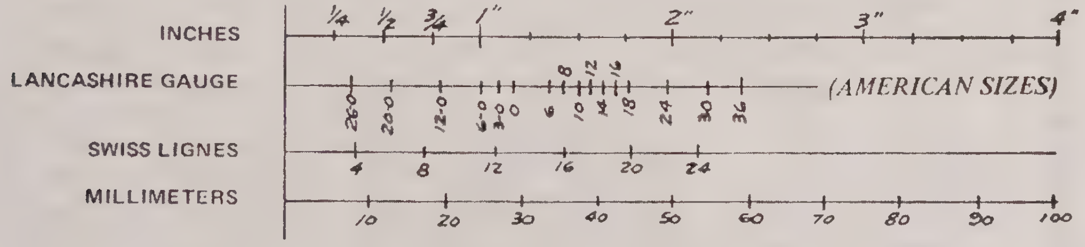
DENNISON SYSTEM: One inch is th base for the letter A size and 1/16 inch is added for each following letter.

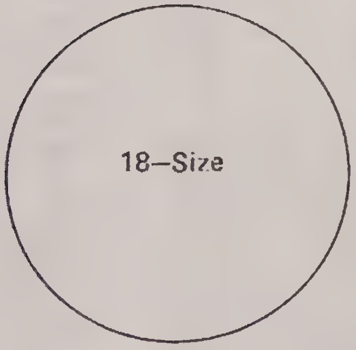
SWISS SYSTEM: One ligne equals .088814 inches or 2.25583 millimeters. One ligne equals 1/12 of an inch of a Paris foot, which is slightly larger than an English foot.

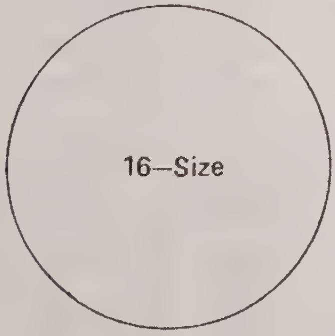
## PROCEDURE

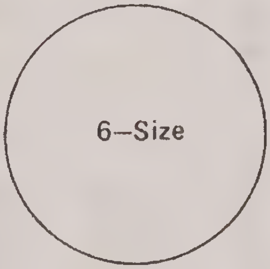
The plate to measure to determine the size is the one with the dial fastened to it (called Pillar, Dial, or Front Plate).

Here is how to determine the size, or approximate size, of your watch. Take off the cover holding the crystal. Be careful in doing this, some are screwed on—like most railroad watches, some are hinged, some pop off—like most hunting cases and dollar watches. In most instances, the dial covers about all of the pillar plate, of which you can usually just see the edge. Take a piece of paper and carefully mark the width of the dial or plate if you can see it, then go to the bottom of the page and place it on the proper scale. This will tell you the size of the watch. If you remove the works from the case (only experienced people should do this), you can measure it more accurately.









# HOW TO MEASURE SIZE

## WATCH SIZES

BASED ON THE DIAMETER OF AN 0 SIZE PILLAR PLATE = $\frac{35}{30}$ INCHES
SIZE NO.=NUMBER OF THIRTIETHS OF AN INCH IN EXCESS OF $\frac{35}{30}$ INCHES
$\frac{1}{30}$ IN.=1 SIZE = .8466 M.M. = .3753 FRENCH LIGNES = $\frac{144}{384}$ FRENCH LIGNES (APPROX.)
1 FRENCH LIGNE = 2.2559 M.M. 1 INCH = 25.40005 M.M.

| SIZE | | DIAMETER OF PILLAR PLATE | | | | SIZE | | DIAMETER OF PILLAR PLATE | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| AMERICAN | SWISS | FRACTIONS OF AN INCH | DECIMALS OF AN INCH | MILLIMETERS | FRENCH LIGNES | AMERICAN | SWISS | FRACTIONS OF AN INCH | DECIMALS OF AN INCH | MILLIMETERS | FRENCH LIGNES |

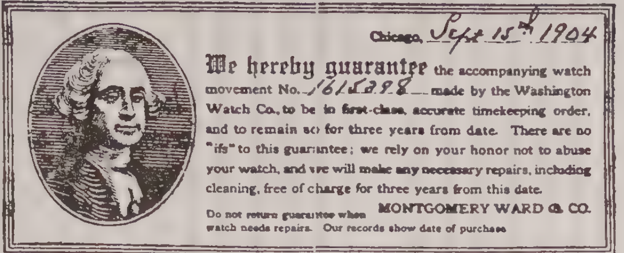
# Specially Guaranteed Washington Watches Best for the Money

**If you want to own a distinctively American watch, built on honor and not to sell cheap, buy a Washington. You can show it in any part of the World and truthfully say "This is the best American watch made" and consequently the best watch in the world.**

Washington watches are not new experiments. We have sold them for many years with unvarying satisfaction to the users. We control the factory output of Washington watches and we use our control to keep the quality high and the price low. The descriptions of Washington watches in our catalogue are positively accurate and truthful. When we say that a Washington watch, is adjusted to position, we mean just what we say.



Chicago, Sept 15th 1904

**We hereby guarantee** the accompanying watch movement No. 1615298 made by the Washington Watch Co., to be in first-class, accurate timekeeping order, and to remain so for three years from date. There are no "ifs" to this guarantee; we rely on your honor not to abuse your watch, and we will make any necessary repairs, including cleaning, free of charge for three years from this date.

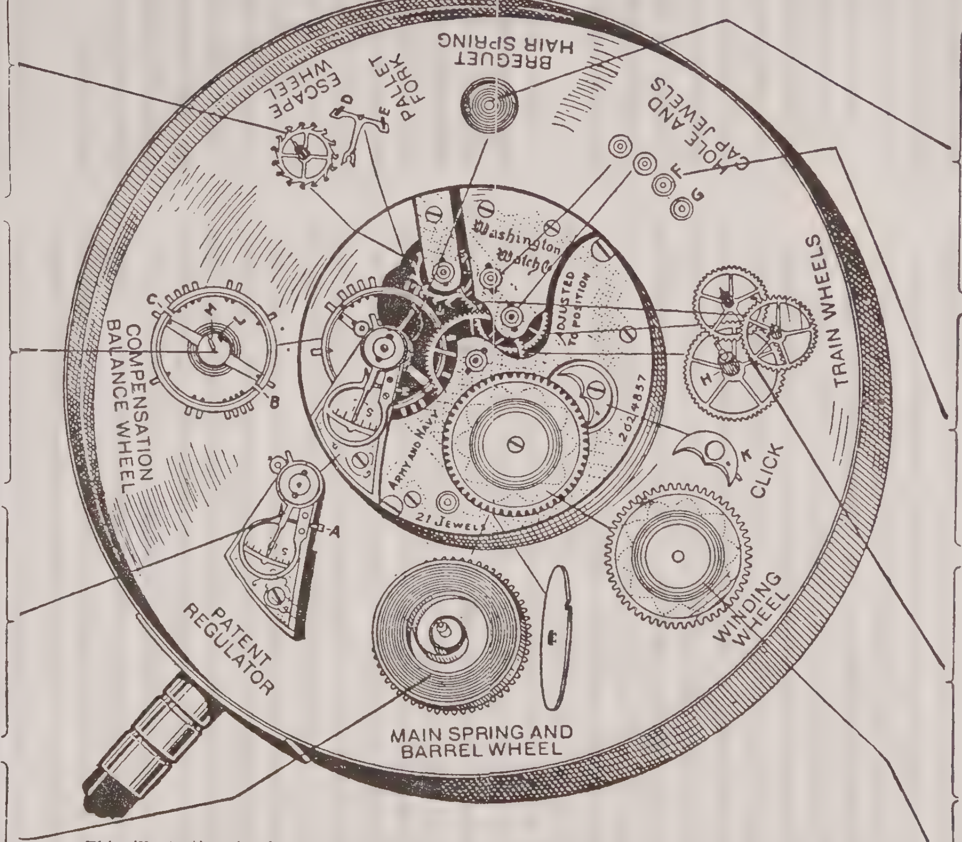
MONTGOMERY WARD & CO.

Do not return guarantee when watch needs repairs. Our records show date of purchase

**You will find each position adjusted Washington movement stamped accordingly, and if you care to test the watch by running it for 24 hours each in different positions, face up, face down, stem up, stem down, etc., you will find only the slightest variation in each position.**

The majority of watches advertised as adjusted to temperature and position have only the ordinary temperature adjustment, and if tested will show a great variation in different positions. The manufacturer does not sell such a watch as "position adjusted," but simply as "adjusted to heat and cold" and the position adjustment exists only in the advertiser's mind.

## A Washington Watch under a Magnifying Glass



This illustration is shown with the view of explaining why we so persistently claim that Washington watches are the best in the world **for the money.** Above we give a few of the more important reasons and show you the vital parts of a Washington watch with its chief points of superiority over other makes. The watch shown in illustration is a 16 size "Army and Navy," one of the most popular grades, but most of the improvements shown are contained in other grade Washington watches, as you may see by reading the detailed description on the next page, where all grades are illustrated and described.

The Escape Wheel and Pallet Fork in connection with the balance wheel allow the power to escape gradually. The pallet fork which receives its forward impetus from the escape wheel embraces the roller jewel "L" on the balance wheel and by this means is carried backward by the return swing of the balance. Each motion of the fork releases one tooth of the escape wheel from pallet jewels "D" and "E." There is great friction here, and in the 16 size "Army and Navy" movement the escape wheel is of hardened steel, while the pallet jewels are selected sapphires. In the other grades the escape wheel is of hardened brass and pallet jewels are selected garnets. The fitting and adjusting of the pallet jewels and the other parts of Washington watches, constituting the escapement, require skill and scientific knowledge possessed by few workmen outside of this factory.

The Compensation Balance Wheel is the pendulum of the watch. The outer circle is constructed of two parts, an inner rim of steel fused to a brass outer rim. This circle is cut in two places—"B" and "C." When heat lengthens and thus weakens the hairspring it also causes the balance to expand. The outer brass rim expands more quickly than the inner steel rim, and as the steel rim holds it from expanding outward, the expansion causes it to curl inward where the circle is cut, thus decreasing the diameter of the wheel and giving the hairspring a smaller load to swing. In cold weather the reverse action takes place. "M" is the balance staff or axle. "L" is the roller jewel set upright in the roller table. The process of adjustment is chiefly carried out by moving the screws set in the rim of balance wheel.

The Patent Regulator is a very important feature of all Washington watches. This regulator is one of the simplest and most practical in use. "A" shows the head of the regulator screw. By turning this screw to the right the regulator is moved toward the letter "S," thereby lengthening the outer coil of the hairspring and causing the watch to run slower. Turning the screw to the left releases the regulator and the curved spring presses it backward toward the letter "F," thereby shortening the hairspring and causing the watch to run faster. By this device the regulator can be moved the smallest fraction of an inch and the watch much more accurately adjusted than with the ordinary regulator.

The Mainspring coiled within the barrel wheel. This is the engine room or power house of a watch. The inner end of the mainspring is attached to a center axle known as the Barrel Arbor, while the outer end is fastened to the inner rim of the barrel wheel. The action of the mainspring in uncoiling itself causes the barrel wheel to revolve and furnishes the power for the watch. The mainsprings used in Washington watches are made in Switzerland, by a secret process of tempering known only to a few manufacturers. No American manufacturer has succeeded in tempering mainsprings to possess the same evenness of power and immunity from breakage which these Swiss springs have, consequently. Washington watches are fitted with the best mainsprings in the world. Duplicates of this Swiss mainspring can be found at every first-class Jewelry store.

The Breguet hairspring is a feature of all Washington watches. Hairsprings are worth many times their weight in gold because of the great amount of valuable labor consumed in the process of manufacturing and tempering. In fitting a hairspring to a Washington watch, many are discarded until one is found that is perfectly adapted to swing the weight of the balance. Notice the final outer coil which is swung above the other coils, finally terminating near the center. This is the Breguet invention and assures an even expansion all around, as well as preventing the old trouble of a double coil catching in the regulator pins and causing the watch to gain time. No matter how hard a jar a Washington watch receives, the two coils of the hairspring will not catch in the regulator.

Hole and Cap Jewels. The hole jewels are the bearings in which the pivots of axles of the various wheels revolve. "F" and "G" are cap jewels which rest outside of the hole jewels and form the ends of the bearings for the pivots. When the cap is in place outside the hole jewel, the two form a tiny cup which holds the oil to lubricate the bearing. Jewels are measured to the one-thousandth part of an inch to fit the pivots, and the extreme care used in selecting and fitting them has much to do with the accuracy of Washington Watches. In the Army and Navy and LaFayette watches these jewels are selected rubies and the settings holding them are of solid gold. In the lower grades the jewels are fine garnets set in composition metal, having a gold finish.

The train-wheels convey power from the mainspring to the escapement. The cutting of the teeth and the pinions on these wheels and the perfect finish which is given them has much to do with the smooth running and accuracy of Washington watches. The wheels are of polished brass excepting in the 16 size LaFayette, in which the center wheel is made from solid gold. Patent Safety Pinion "H" on the center wheel is screwed onto the staff instead of being a solid piece as the other pinions are. If the mainspring breaks, this pinion unscrews from the staff, thereby preventing damage to the more delicate parts of the watch. This safety pinion is a feature of all Washington watches.

The winding wheel and click are connected directly with the stem and are the means by which the mainspring is wound. The click allows the winding wheel to turn only in one direction, and as it drops into place between the teeth it causes the particular clicking noise heard when the watch is being wound. Both these parts are of beautifully polished steel, winding wheel having an etched damaskeen pattern

# JEWELING

## JEWELING OF AMERICAN WATCH MOVEMENTS

The number of jewel in a watch movement is one of the factors that determines its value to collectors. Generally speaking, for watches of high production (more than 10,000) the greater the number of jewels the higher the value. For lower production watches this rule also applies but when the production drops below a couple thousand scarcity becomes more important. Thus, 7, 11 and 15-jewel Hamilton watches demand very high prices relative to the 17 and higher jeweled Models and 19- jewel Illinois "Sangamo Specials" are valued higher than 21 or 23-jewel "Sangamo Specials".

Since jewel count is a factor in determining the value of a watch, it is worthwhile knowing how to determine the number of jewels without disassembling the movement. Fortunately, most American watches with 15 or more jewels are clearly marked. However, a sufficient number of unmarked 11-jewel watches are sold as 15-jewel so that it is useful to know what the common jeweling practice was. First, however, it should be noted that jewels are both functional and cosmetic. Their use originally was purely functional to reduce friction and wear--but as soon as the watchmaker recognized their eye appeal value they took on added significance. Swiss manufacturers sometimes carried this to ridiculous extremes by adding jewels where there were no pivots to protect, just to increase the apparent quality of the watch.

The introduction of jewel in watches was prompted by the need for reducing the friction and resultant wear of those parts of the watch that are critical to its timekeeping and reliability. In a lever escapement movement these parts are: the balance staff pivots, the roller pin, and the pallets. Consequently, if a hole jewel and a cap jewel are placed on each end of the staff and the roller pin and both pallets are also jeweled, we have a seven jewel watch. A.L. Rawlings, author of *The Science of Clocks and Watches*, states that seven jewels really are all that are required. Therefore, the jewels beyond this number are primarily cosmetic; that is, they do more for the appearance of the watch than they do for its mechanical perfection. The point is arguable but there is at least some evidence to support Rawlings' contention. For example, many manufacturers of American watches made some nine- and eleven-jewel watches in which the extra jewels were all in the top plate so that two or four arbors were jeweled on one end only, where it showed. If these extra jewels really were inserted for functional reasons one would expect to find half of them hidden. Advertisements for these watches which appeared in trade catalogs of the period even touted them as, "...having an appearance almost like the higher Grades because the upper plate is full-jeweled". (A 15-jewel watch was called "full jeweled" by the trade.)

Returning to the question of how to determine the number of jewels in a watch without taking it apart, the following paragraphs will describe how the American watch manufacturers typically configured each of their various jewel counts. This will take care of the majority of watches; however, due to the practice of cosmetic jeweling, it will occasionally be necessary to remove the dial to make an absolute determination.

**Seven (7) Jewels**: With the exception of the cheaper "dollar" watches practically all American- made watches have at least seven jewels. These are always placed as previously described, a hole jewel and cap jewel on each end of the balance staff, a jewel for the roller pin, and two pallet jewels. In full-plate watches you will only be able to see the upper balance jewels in the balance cock. In three-quarter plate and bridge watches you should also be able to see the pallet jewels and possible the roller pin jewel.

**Nine (9) Jewels:** Relatively few watches were made with nine jewels. The two extra jewels usually were placed on the upper ends of the third and fourth wheel arbors where they added cosmetic value to the watch. Unfortunately, this arrangement cannot be distinguished from a functionally jeweled 11-jewel movement without removing the dial.

**Eleven (11) Jewels:** There appear to be only two 11-jewel configurations. Either the four extra jewels are placed just in the upper plates or they are placed in two pairs, that is, a pair of jewels on the upper and lower ends of two arbors. The first configuration is cosmetic while the second is functional. The cosmetic arrangement of 11 jewels cannot be distinguished from 15 jewels without removing the dial and examining the lower (pillar) plate. Fortunately, however, most 15-jewel watches were marked "15 Jewels" so this will only be necessary occasionally. If the watch appears to have 15 jewels but is not marked it is safest to assume it has 11 jewels.

**Twelve (12) Jewels:** The 12-jewel configuration is one of the rarest in terms of total quantity produced. In most cases the additional five jewels are arranged in 2-½ pairs with a pair on the pallet and escape arbors plus an extra jewel on the upper end of the fourth wheel arbor. In other words, a logical extension of the functionally jeweled 11-jewel watch. However, in at least one case, the Illinois "Currier" Grade, some third Model (5th pinion) movements have five cosmetic jewels, all in the top plate.

**Thirteen (13) Jewels:** This also is an uncommon jewel configuration. As in the case of the 12- jewel watch, the 13-jewel watch is a further extension of functional jeweling with three full pairs of jewels, which means that both ends of the fourth, escape and pallet arbors are jeweled. However, some movements have the third pair arranged as cosmetic jewels on the third and fourth wheel arbors in the top plate, and have the appearance of being 15-jewel watches.

**Fifteen (15) Jewels**: These were called "full- jeweled" by the trade and almost invariably the eight extra jewels are arranged in four pairs, positioned on each end of the third, fourth, escape, and pallet arbors, leaving only the center and barrel arbors unjeweled. As indicated earlier, this is the configuration most often confused with the cosmetic 11- or 13-jewel configurations so if a watch is not marked "15 Jewels" but appears to be so, be wary, you probably will have to look under the dial to tell for sure, unless it is a full plate 18-size Grade "Stuart", "Bunn", "Miller", "Dean", "B.W. Raymond", "Cresent Street", "Railway", etc.

**Sixteen (16) Jewels:** Another interesting variant, these watches are somewhat uncommon but not nearly as scarce as the 12 and 13-jewel watches. Most are not marked and they are easily confused with 17-jewel watches because many examples have the 16th jewel on the upper end of the center wheel arbor, while the lower end of that arbor is not jeweled. However, there also are some 18-size watches which have a fifth pinion that is jewled only on the upper end; for example, the Illinois Grade "103".

**Seventeen (17) Jewels:** Generally speaking, except for the early watches, all American watches with 17 or more jewels are clearly marked. With one exception, the jewel configuration for 17 jewels is such that all arbors except the barrel have jewels on both ends This was the minimum acceptable jewel count for railroad watches once the railroads developed such criteria: however, it was not acceptable on all railroads, since some required at least 19 jewels. The single exception to this configuration occurs in some 18-size Illinois watches which have fifth pinions that carry the seconds hand. In these watches, the last two jewels are on the ends of the fifth pinion arbor rather than on the center arbor.

**Eighteen (18) Jewels:** Very few watches are found with 18 jewels; however, there is an 18-size Illinois Grade "65-S" movement that is marked "18 Jewels". This particular movement has a fifth pinion and the 18th jewel was inserted in the upper plate for the 5th pinion so that all pinions are jeweled on the upper side. The watch was made especially for Wilson Brothers, a jeweler, which probably accounts for the unusual jeweling. Also, the first 18-size nickel Illinois Bunn Grade with fifth pinion has 18 jewels but is not marked.

**Nineteen (19) Jewels:** Excluding watches with fifth pinions, once all the train arbors are jeweled on both ends, any additional jewels must be added either to the mainspring barrel or as cap jewels to one or more arbors in the train. There appear to have been three principal 19-jewel configurations used by the watch industry; cap jeweled pallet, jeweled barrel, and cap jeweled escape. Elgin employed all three variations in their 16-size B.W Raymond. Nineteen-jewel watches were not produced in large quantities.

**Twenty-one (21) Jewels:** The epitome of high Grade watches, the 21-jewel movement has over the years become known as the "Railroad Watch". Most 21-jewel Railroad Grade watches have cap jewels on both the pallet and escape arbors (as well as the balance) so that the last three arbors in the train are cap jeweled on both ends; however, some 16 and 12-size watches have uncapped pallet arbors and jeweled barrels.

**Twenty-three (23) Jewels:** With only a few exceptions, 23-jewel watches were the highest jewel configurations offered by most companies. The exceptions are Seth Thomas, which made up to 28 jewels, Illinois which made up to 26 jewels, and Hampden which allegedly made up to 25-jewel watches. The most frequently found configurations with 23 jewels incorporate cap jewels on the balance, pallet, and escape arbors plus a jeweled barrel. However, another configuration appears in some 16-size Illinois watches made before development of the jeweled barrel. Early versions of these watches had cap jewels on the third wheel arbor instead of a jeweled barrel.

**Twenty-four (24) Jewels:** The most common 24- jewel watch is the Illinois 18-size Grade "Bunn Special". This watch has the standard 21-jewel configuration plus cap jewels on both ends of the third wheel arbor and an impressive looking but non-functional jewel on the upper end of the barrel arbor. The evidence strongly suggests that the 24- jewel watch was designed to be a prestige watch which would appeal to the buyer who wanted a watch with more jewels than anyone else offered. The fact that more than 11,000 were produced suggests that this advertising strategy worked.

**Twenty-five (25) Jewels:** At this point, we have gotten into the region where so few watches exist that it is difficult to find examples. The only Illinois Grade listed with 25 jewels is the 16-size "Sangamo", fourth and fifth Models. The watches actually seen are private label-marked "Benjamin Franklin" rather than "Sangamo". The jeweling configuration is essentially a combination of both of the aforementioned 16-size 23-jewel configurations; that is, cap jewels on the third wheel arbor and a jeweled barrel. The Seth Thomas 18-size 25-jewel Maiden Lane is jeweled differently. It has cap jewels on the pallet, escape, third and upper fourth arbors plus a cosmetic jewel on the upper barrel arbor.

**Twenty-six (26) Jewels:** Illinois made the only known 26-jewel watch, the 18-size "Bunn Special" Grade, Model 6. Unlike the 25-jewel watches, this has been seen both with Illinois and private label names on it ( Pennsylvania Special and a Benjamin Franklin). The configuration is a combination of the 23 and 24-jewel 18-size watches That is, a 24-jewel watch in which a functionally (internally) jeweled barrel has been installed, adding two more jewel to the 24, for a total of 26. This means there are actually three jewels associated with the barrel, two functional and one cosmetic.

**MORE THAN (26) TWENTY SIX JEWELS:** Beyond 26 jewels, it is possible still to add three more jewels to the movement: a cap jewel on the upper end of the center wheel arbor and two jewels for the banking pins. A 16-size Waltham movement has been reported as having a cap jewel on the upper end of the enter wheel arbor but I believe this to be very unusual, at least among American watches. The 16-size 23-jewel Howard, Series 0, Model A did employ the jeweled banking pin idea. This was another way of achieving 23 jewels without going to the expense of a jeweled barrel. A 28-jewel Maiden Lane has not been examined but it seems probable that the three additional jewels are associated with the barrel.

Space does not permit discussion of all the possible jeweling arrangements and counts; consequently, some of the less common have been omitted: for example, 10 and 20 jewels found on some Lancaster-Keystone watches and 22 jewels used in the sweep second-handed Hamilton 4992B on marked Elgin and Waltham military watches. Also, Seth Thomas used a different configuration with unjeweled center arbor on some of their 17 and 19 jewel movements, and there are others.

Undoubtedly, as additional watches are examined more variations in jeweling will be discovered; however, it should be possible to determine the number of jewels in most AMERICAN - MADE watch movements on the basis of the foregoing information. For convenience, the distinguishing features for each configuration are listed in the following summary.

# JEWELING& PRIVATE LABEL- SEARS

## TABLE I

### AMERICAN-MADE WATCH JEWELING PRACTICE

| No. of Jewels | Distinguished Features |
|---|---|
| 0 | Pin lever so called dollar (Westclox-Newhaven-IngrahamEtc.) |
| 7 | Only one visible pivot jewel – that on the balance cock. |
| 9* | Two plate jewels visible and none under dial. |
| 11* | Two plate jewels visible and two under dial, or four plate jewels visible and none under dial. |
| 12* | Three plate jewels visible and two under dial if movement does not have a fifth pinion. Otherwise, five plate jewels visible and none under dial. (Applies to 18-size watches only, others unknown.) |
| 13* | Three plate jewels visible and three under dial or four plate jewels visible and two under the dial. |
| 15* | Four plate jewels visible and four under the dial; probably not marked. |
| 16* | Five plate jewels visible and four under the dial; probably not marked. |
| 17* | Five plate jewels visible and five under the dial; Probably marked. |
| 18* | Six plate jewels visible and five under the dial; movement has top-jeweled fifth pinion. (Applies to 18-size watches only.) Probably marked |
| 19 | Five plate jewels visible and five under the dial; either escape wheel arbor cap-jeweled or jeweled barrel. Always marked. |
| 21 | Five plate jewels visible and five under the dial; pallet and escape wheel arbors cap- jeweled or uncapped pallet and jeweled barrel. Always marked. |
| 23 | Five plate jewels visible and five under the dial; either pallet, escape and third wheel arbors cap-jeweled or pallet and escape wheel arbors cap-jeweled and jeweled barrel. Always marked. |
| 24 | Six plate jewels visible and five under the dial; pallet, escape and third wheel arbors cap-jeweled. Always marked. |
| 25 | Five plate jewels visible and five under the dial; pallet, escape and third wheel arbors cap-jeweled, and jeweled barrel, or pallet, escape, third and upper fourth arbors cap- jeweled and upper barrel arbor jeweled. Always marked. |
| 26 | Six plate jewels visible and five under thedial; pallet, escape and third wheel arbors cap-jeweled and jeweled barrel. Always marked. |

* These jewel counts result in ambiguous configurations and may require removal of dial in order to make a correct determination.

### PRIVATE LABEL--ILLINOIS WATCHES

Note: This Private Label discussion was written for *American Pocket atch Encyclopedia and Price Guide-Volume II, ILLINOIS*, and does not cover the complete subject but will give you a very good understanding of the whys and wherefores of Private Label watches.

Private Labels are a very interesting aspect of American pocket watches. Their origin stems from the watch companies' desire to increase their share of the market. The device was a simple one, that is, offering the jeweler at little or no expense a customized product; appealing to his ego and affording him a means to advertise himself at the same time. The appeal was irresistible and thousands of jewelers took advantage of it. However, eventually Private Labels died out. Two forces brought this about. First, all such devices have limited lifetimes; in other words, the novelty wears off. Second and more important, Railroad Time Service rules became more stringent and outlawed Private Label-markings from watches approved for railroad service.

It is interesting to examine the incidence of Private Label-markings as a function of time. For the Illinois Watch Co. the earliest recorded Private Label appears during the first year of operation, 1872. The number of such markings then increases each year until 1882, in which year 51 different Private Labels have been recorded. The quantity remains high, averaging better than 20 per year until 1900. Thereafter it drops abruptly and remains low for the duration of the company's life. In addition, the type of label changes after 1900. Gone are the Jeweler and Watch Inspector names and what remains consists mostly of factory labels such as "Masterpiece" and Non-Railroad Grade labels such as "Sears Roebuck & Co." In fact, 63% of the Illinois Private Labels recorded in the watch listings were sold between 1880 and 1900. Yet, this 20 year period constitutes less than one-third of the company's lifetime and accounts for less than one-fifth of the total number of Illinois watches made. Additional insights await those who have the time and inclination to analyze the Private Label listings in more detail.

It is important to remember that most of the SMALL JEWELER and RAILROAD ASSOCIATED Private labels will be RARE with a probable production of six (6) to ten (10) watches of each Grade. This inference is based on very few examples; but where we have seen at least two of the same Grade Private Label-marked movement, the serial numbers usually are less than ten (10) numbers apart.

The Illinois Watch Company has the distinction of having made a greater variety of Private Label watches than did any other American manufacturer. We don't know why this is so but assume that they encouraged the practice to a greater extent--perhaps by price incentives--than the others. There are well over 700 major entries in this book and many of these have numerous sub- listings. Based on what we know about the way these watches were sold, a conservative estimate is that perhaps 25% of the TOTAL NUMBER of Illinois Private Labels are represented here. However, more importantly, we believe that this listing contain 99% of the important Private Label, i.e., those which significantly affect the value of the watch on which they appear.

At the present time, we believe that the single most important Illinois Private Label is "The R.W. Sears Watch Company". This label represents the very beginnings of what, until recently was one of, if not the, world's largest conglomerates: Sears, Roebuck and Company. Most people are vaguely familiar with the Sears and Roebuck story but few know the fascinating details of how this "Horatio Alger tale" began.

Richard Warren Sears (V2 281-2) was born in 1863. The son of a Minnesota farmer, he was forced by adverse circumstances to go to work in order to help support the family when he was sixteen. He decided to become a railroad telegrapher and did so by trading manual labor around the railroad station in return for telegraphy lessons. Once qualified, he went to work for the railroads and eventually was assigned to manage the railroad station and express office in North Redwood, Minnesota. Here he gradually learned about the"mail-order" business as it then was being practiced. In particular, he learned that it was common practice for wholesalers to ship merchandise to retailers on consignment and frequently even to ship items that had not been ordered in hopes that the merchant would attempt to sell them. One day, a Chicago wholesaler shipped such a lot of watches to a local jeweler who refused them. The wholesaler, hoping to avoid the expense of their return, then offered to sell the watches to Sears for about $12 each. Sears found the idea intriguing and took them. He then promptly offered them to other station agents for $14 suggesting that they could turn them over for a tidy profit while still under-selling their local jewelers. The technique was effective, Sears ordered more watches and within a short time had netted five thousand dollars! He recognized this as a more promising vocation than that of station agent so abandoned his railroad career and formed The R.W. Sears Watch Co. in Minneapolis, Minnesota in the year 1886.

Sears quickly discovered that Minneapolis was too far off the beaten path to allow him to fully realize the potential for his new venture so in March 1887, he moved his business to Dearborn Street in Chicago. Here he began to learn about the other side of merchandising: returns of defective goods. He saw that he would soon be out of business if he did not quickly hire a competent watchmaker. He placed an advertisement in Chicago Daily News and Alva C. Roebuck (V2 281-8) a Hammond, Indiana watchmaker responded. Thusly was formed the partnership of Sears and Roebuck.

The R.W. Sears Watch Co. operated for only two and a half years before Sears sold the company outright for $72,000 and returned in 1889 to Minnesota where he formed a number of new mail- order watch companies during the next several years. His sale agreement stipulated that he would not use the R.W. Sears Watch Co. name, himself, for three years so he used names such as A.C. Roebuck & Co. (1891) and eventually Sears, Roebuck & Co. (1893).

The Illinois Watch Company made Private Label watches for Sears under at least four names. Based on the history of Sears, Roebuck & Co. as printed in "Catalogues and Counters"--Boris Emmet & John Jenck, The University of Chicago press, 1950, from which the foregoing was obtained, and from serial number dating of known Sears Private Label watches, the following chronology has been prepared.

### PRIVATE LABEL PERIOD OF USE

| | |
|---|---|
| The R.W. Sears Watch Co.<br>Minneapolis | 1886-Early 1887 |
| The R.W. Sears Watch Co.<br>Chicago | 1887-1889 |
| Sears, Roebuck & Co. | 1892-1904 |
| Plymouth Watch Co. | 1904-1923 |
| InterState Chronometer | 1911-1995 |

We do not know how many R.W. Sears Watch Co. –marked watches were made but compared to the later markings the number was small. It is highly unlikely that all the watches sold by Sears during the two-plus years that he used this name were marked in this manner he repeatedly followed a practice of buying manufacturer's discontinued Grades at very substantial discounts in order to sell them below competitor's prices; yet, as far as can be determined none of the Grades represented by known R.W. Sears Watch Co.–marked watches had been discontinued by 1889, so he must also have sold other Grades that did not bear his private label. It is most likely that Sears, being the opportunist that he was, did not follow any consistent practice in this regard, other than perhaps that of having watches marked when it could be done at no cost and not otherwise. It also is interesting to note that the R.W. Sears–marked watches are all low-to-medium quality with 7 to 15 jewels and unadjusted; the Sears Roebuck & Co. and Plymouth Watch Co. watches are all medium-to-good quality with 15 or 17 jewels and mostly adjusted; and the InterState Chronometer watches are all good-to-high quality with 15 to 23 jewels and, except for some of the "0" size Grades, adjusted.

### VALUES FOR PRIVATE LABEL WATCHES

The values for Private Label watches are generally higher than for their company-marked counterparts. How much higher depends on the variety and importance of the label and, of course, on the demand for it among collectors. Of the Illinois-made Private Label watches, prestige labels such as Benjamin Franklin, Ariston, InterState Chronometer, Ball, etc., enjoy great popularity and command high prices. The same situation applies to the historically important labels such as the R.W. Sears Watch Co., and the Railroad Watch Inspectors denoted by "RRWI" following their names. (There are many Railroad Watch Inspectors listed that are not indicated as such by "RRWI" because of lack of information.) At the present time the Santa Fe Watch Co. label seems to be more popular among collectors than is the Burlington Watch Co. label although both companies sold very similar watches in marked cases and with marked dials. Perhaps the explanation lies in the fact that H.S. Montgomery, Chief Watch Inspector for the Santa Fe Railway, was the founder of the Santa Fe Watch Company's Predecessor, the Santa Fe Route Co.

If a Private Label watch does not fit into one of the above categories then its value will be only slightly (if at all) greater than the equivalent Company-marked watch. Still, this category of watches contain many interesting collectable pieces which have appeal to beginning collectors who want something different to collect but are constrained by a modest budget for their hobby.

# PRIVATE LABEL- DIALS- CASES

### ORIGINAL DIALS FOR PRIVATE LABEL WATCHES

Not all Private Label watches have Private Label dials; in fact, quite the contrary. Usually, the cost of placing the Private Label on the movement was minimal to nonexistent but the special dial marking was always charged for. Consequently, many Private Label-marked watches have factory or unmarked dials. This fact coupled with the fact that dials are easily changed makes it difficult to establish which watches should have Private Label dials unless examples of such are known. Nevertheless, we believe enough such examples have been found to allow an accurate determination for most watches and particularly for the important ones. This information is included in the listings whenever it is known. Thus, the absence of the words: "Dial: same" or "dial marked–" from a listing generally means that a factory-marked or unmarked dial is correct as far as we know. However, there undoubtedly are some watches in this group which have been improperly included due to lack of information. Values for Private Label-marked watches are based on inclusion of the proper dial and may be reduced by 25% to 50% when the correct dial is missing.

### ORIGINAL CASES FOR PRIVATE LABEL WATCHES

Many of the Private Label watches were originally cased in specially marked cases. This condition most often applies to the high-production Private Labels. Thus, we find Santa Fe Watch Co. watches always originally cased in Santa Fe Watch Co.–marked cases and Burlington Watch Co. watches in Burlington Watch Co. cases, etc. For those watches to which this situation applies, a statement regarding the case will be found at the beginning of the listing for that Private Label.

For other high-production watches such as those marked Washington Watch Co., some apparently were originally cased in Montgomery Ward & Co.– marked cases but others were not. Sometimes the advertisements help. Thus, a 1909 Montgomery Ward & Co. Catalog No. 78 says: "The cases are M.W.& Co. 20 and 25-year gold-filled quality..." But the 1919 catalog is less specific and just says: "We offer them here in a pleasing variety of beautiful and serviceable cases." Sears, Roebuck & Co. sold cases bearing their own mark as well as those marked "Dueber" and "Elgin". In their 1905 catalog they offer their own Private Label watches as well as those marked for Elgin and Waltham in any of the foregoing cases; so, about the most that can be said is that a Sears, Roebuck & Co. Private Label watch is "right" in a Sears, Roebuck & Co. case or in a Dueber or Elgin Watch Case Co., case. Only two of the Sears Private Labels seem to have been cased only one way. These are the R.W. Sears Watch Co.-marked watches of 1886-1889 and the later Sears, Roebuck & Co., InterState Chronometers that were sold in 1911-15. both of these labels were advertised as "cased in John C. Dueber 20-year yellow gold-filled cases". No other cases were offered so we must assume that an InterState Chronometer in any other case is a re-cased movement. (A few R.W. Sears Watch Co., movements have been found cased in low quality gold-filled cases marked simply "R.W. SEARS" but most are in the Dueber cases.)

In essence, what is important is whether the case looks right for the Private Label watch. Obviously, if it can be established that certain case markings always were used, as in the Burlington Watch Co. example, then anything else will detract from the value of the watch. But for the majority of Private Label watches no such restriction applies so they can be treated just like any other watch. That is, if the case is contemporary with the movement finishing date and bears no extraneous case screw marks it must be accepted as the proper case. When looking for items to upgrade your collection always look at the empty cases for that special (and many times inexpensive) case for your watches.

### HOW PRIVATE LABEL WATCHES ARE LISTED

All Private Label-marked watches are listed alphabetically. Therefore, it is necessary only to look at the Private Label-marking on the MOVEMENT and match it with one of the listings. (Do not use dial markings because dials can be changed.) However, sometimes it becomes difficult to know where to look first.

## The following guidelines should help.

1. If the label contains a surname (e.g. Sears, Anderson, Jaccard, etc.) look first under that name.

2. If the label does not appear under that surname look next under the first part of the name. For example, Montgomery Ward will be found under "M", Benjamin Franklin under "B", etc.

3. Some Private Labels do not indicate who actually sold them; thus, Grant, Lincoln, etc. were sold by A.C. Becken & Co. and will be found under "B" but also will be found under "G" and "L".

4. Listings that include a rank or title such as General or King also are double-listed. Thus, General Reno will be found under both "G" and "R".

5. Double surnames such as Potter & Gray are listed under the first surname, i.e., "P" in this case.

6. Monograms are difficult to decipher so be sure to look under all the initials before giving up.

7. If a Private Label-marked watch is illustrated in any Heart of America Press book -- its location (s) will usually appear after the EA number; (See page 27 to 29 for an explanation of these location codes.)

Finally, do not be surprised if you find that your Private Label marking does not agree exactly with the listed label. There are numerous variations. The longer the jeweler used a label the more likely it was to change. In addition, some labels are based on written descriptions rather than photographs or movements examined and may contain errors. For a long time "Wathier" was thought to be "Mathier"; Old English can be difficult to read!

## UNLISTED PRIVATE LABEL-MARKED AMERICAN-MADE WATCHES

If you have identified your watch as an American-made watch and you cannot find it listed try and compare it to a similar. Grade watch with the same CODE LINE (second part of description). It will help speed your evaluation if you take time to write an accurate CODE LINE for your watch. The fact that thewatch is not listed means only that researchers had not seen it before this book was printed. Omission from this book does not make it valueable. Rare maybe because of advertised orders for 6 or more watches and the futrue order may be for another kind, size, make, name etc. We will continue to add new Private Label names and other new information developed by research now being done by many collectors, in the next edition of "Beginning To End". When you find those unlisted Private Label-marked watches let Bill or Roy know either by showing the watch to us, sending a good black and white or color close-up of the movement and dial of your watch, or making an.accurate drawing of the movement and sending it with a complete description of the movement and dial markings

## ORIGINAL CASES

As watch collectors have become more sophisticated in recent years, perhaps their greatest frustration has been felt in the area of original cases. Clock collectors have long been concerned when they find a rare clock whether a "marriage" may have occurred between the movement and case but until recently most watch collectors have not been overly concerned about this. Perhaps this is because, unlike clock cases, watch cases wore out in the natural course of events and recasing was a common activity practiced by all jewelers. In fact, it was not uncommon for a railroad watch subjected to the abrasion of cinders in the pocket of an engineer's overalls to be re-cased two or three times during its useful life. Consequently, the originally cased railroad watch is the exception rather than the rule.

To further confuse the issue, very often a jeweler would re-case the customer's watch in a used case rather than a new one to save him money and if the case previously had held a movement of a different make the new movement's case screws would add yet another set of marks to the case making it difficult today to tell an original re-case from a non-original re-case. That is, to tell one done by a jeweler years ago from one done by a collector today.

Perhaps it is because of this uncertainty regarding re-cases or perhaps it is just the trend toward purism; in any event, today's collector is much more case-conscious than was his predecessor of a decade or two ago. He wants his watches to be cased the way they were when originally sold or at least tc be cased so that they cannot be told from an original. This means the case must not have any spurious or extraneous case screw marks and must be of a style and material that is appropriate for the age of the movement. Further, if the watch is one that is known to have been factory or private label-cased, it must now be in an appropriate factory or private label case. Anything else will detract from the value of the watch. However, for the vast majority of watches and particularly those made before 1900 (with a few exceptions noted below) the movement was cased by the jeweler at the time it was sold, in a case which the customer selected, based on his particular tastes and means. Therefore, an original case for these watches nowadays means one that cannot be told from the original either by style, material, extraneous screw marks or alterations.

This situation puts the burden on the buyer to make sure he is not paying for an original case unless he is reasonably certain it is an original case. Thus, he would be suspicious of a movement which dates from 1900, according to its serial number, cased in a short pendant modern style case. This could be an original re-case, however, if it shows no extraneous screw marks. He also would suspect any movement that was made much before 1860 if cased in a gold-filled case since this was the patent date for such cases. However, in this instance the question cannot be so easily answered because finishing dates for movements do not necessarily indicate when they were first cased. Many watch movements languished in either the factory's or the jeweler's inventory for years before being sold and cased. Perhaps the most that can be said for such early movements is that they were MOST LIKELY to be cased originally in solid gold or silver cases. And, of course, one should "raise an eyebrow" at any case that bears a dated inscription which significantly pre-dates the finishing of the movement!

Some watches such as the early Howards were not made in standard sizes and so will not fit standard American cases made for other manufacturers' watches. To make matters worse, many original Howard cases in gold were scrapped during the depression years and today there are lots of uncased Howard movements. In fact, the situation is so bad that it has now become acceptable to modify an early key-wind case of standard size to fit a Howard movement. Of course, an authentic originally cased Howard will always have a higher value but an expertly fitted re-case is the next best thing.

A similar situation exists for some early American Watch Company Grades, particularly those that were wound and set from the back. Original cases for these also are extremely scarce and collectors are now accepting modified re-cases if expertly and tastefully done.

Finally, in this category also are some of the United States Watch Co., Marion, N.J. watches. Original cases, again, are hard to find and some Models such as the 18-, 16-, and 14-size key-wind and set from the back and the stem-wind button-set will require special case modifications to make an acceptable re-case. Collectors who have a need for this type of casework should contact one who offers such services.

# POCKET WATCH CASE VALUES

## RETAIL VALUES for MINT CONDITION POCKET WATCH CASES with CASE MAKER TRADEMARKS

### "PLAIN POLISH" – SOLID GOLD & PLATINUM CASES

| | 18 Size | | 16–17 Size | | | Thin 10 & 12 Size | | | Thick 8/10S | | 6 Size | | 0 Size | |

### SPECIAL FEATURES

For all cases, "other than solid platinum and gold," the features listed below will increase the value shown above by the percentage indicated below. For more than one feature add the percentages together.

Plain polish (Chart figures) . . . . . . . . . . . . . . . . . . . .100%
Engine turning (barley corn) . . . . . . . . . . . . . . . . . . .115%
Die engraved design . . . . . . . . . . . . . . . . . . . . . . . . . .125%
Die engraved locomotive, bicycle, sawmill, animal . . . .150%
Hand engraved design—all over. . . . . . . . . . . . . . . . .200%
Hand engraved locomotive, bicycle, etc . . . . . . . . . . .150%
Gold inlaid locomotive, etc. on silver case . . . . . . . . .125%
Gold multi-color inlay work . . . . . . . . . . . . . . . . . . .200% up
Gold multi-color overlay work . . . . . . . . . . . . . . . . .300% up
Precious stones (add value of stones). . . . . . . . . . . . .200% up
Gold hinges, thumbpieces, etc . . . . . . . . . . . . . . . . . .110%
Silver cases over 5 ounces . . . . . . . . . . . . . . . . . . . .150%
Box hinges. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .150%
Hand engraved watch inspector. Loaner designation. . .300% up
Custom marked "Burlington", "Ball", "Bunn", etc . . .150%

Identifying the hand engraved cases from those engraved by dies will be difficult, especially for worn cases. Examine the engraving detail with a magnifying loupe and look for the cutting irregularities (tool marks) characteristic of hand work.

NOTE: 20 and 25 Yr. gold filled cases have about seventy cents per pennyweight (Dwt) scrap bullion value with gold at $400 spot.

* Long pendant – Pre-1928 Dress and Railroad Cases.

### CONDITION

The condition of your case also affects value. Match your case as nearly as possible with one of the levels shown below. The adjusted value will then be the indicated percentage of the value previously determined.

#### POCKET WATCH CASE GRADING (Condition)

Factory New — No evidence of use . . . . . . . . . . . . . . . . . 200%
Mint — Evidence of use but no discernable wear . . . . . . . . 100%
Fine — High points show some wear, no brass
showing. . . . . . . . . . . . . . . . . . . . . . . . . .40% to 80%
Good — All over wear, slight brass showing. . . . . . 30% to 60%
Fair — Decorations badly worn, much brass
showing. . . . . . . . . . . . . . . . . . . . . . . . . .15% to 40%
Poor — Good only for parts or temporary movement
holder . . . . . . . . . . . . . . . . . . . . . . . . . 5% to 30%

#### UNDESIRABLE RECASES

Some movements are so valuable and original cases so rare that recasing is quite acceptable, if properly done so that the case enhances rather than detracts from the movement. However, where original factory or private label-marked cases are known to exist, recasing—no matter how well done—lowers value. If you cannot obtain the proper case the value must be further adjusted as follows.

Uncontemporary case style or extra case screw marks. . . . .90%
Center section reamed or fitted with filler ring or
Cuvette has filled or unnecessary keyhole. . . . . . . . . .80%
Factory or private label missing where required. .80% and down

† Short pendant – Post-1928 Railroad Cases.

# DIAL FEET- ASENDING MINUTES

## DIAL FOOT POSITIONS & MOVEMENT WEIGHT

(in decimal minutes to the nearest tenth, & dwt's)

**Use this chart to find out what your dial fits!**

Dial foot positions are given as the positions onthe chapter ring (read in minutes on the dial, to the nearest tenth) where the feet would appear if they projected through the front of the dial. When comparing your dial to these tables it is important to remember that these foot positions often vary due to poor quality control in the factory. Therefore, your dial may have feet that differ in position from the table by a half-minute or more. Some dials require fitting by bending, filing or removal of at least a foot. Movement weight includes DIAL, HANDS & DUST BAND if any. Weight will vary slightly depending on type of jewel settings, balance screws and style of dial.

# MOVEMENT& DESCRIPTION CODE

## EXPLANATION OF EACH WATCH MOVEMENT DESCRIPTION

1st Part: The lettering that appears on the top or back plate is shown in **Bold** Upper and Lower case letters. Important dial information is shown in code (see below) for type, material, and style, followed by marking. Actual words which appear on the dial are underlined but if they are the same as, or a **truncated** version of, those on the movement the description will just say same. (With rare exceptions, notibly some dials for Railroad Grade [RRG] watches, no jewel or adjustment information is found on dials.) If no dial information is shown, either it is unknown, inconsistent, or it is unimportant. All descriptive information not marked on the movement or dial is in unenhanced type. Now read this 1st Part again and make sure you fully understand it.

1 2 3 4 5 6 7 8 9 10 11 12 13 14
2nd Part: 18S - 23RJ - O N 6 L - T6PI - RRG"BUNN S" EA 457 (ca 1894) (V2 184-1) (Illinois) $450-550

## WATCH DESCRIPTION EXAMPLE

1st Part: **Bunn Special-Springfield Ill.-23 Ruby Jewels-Adjusted Temperature 6 Positions Isochronism- Double Roller** DS-GE-ART-RR-Dial: Illinois Watch Co.

2nd Part: 18S-23RJ-ON6L-T6PI-RRG"Bumn S" EA 457 (ca 1894) (V2 184-1) (Illinois)........................................................................................ $450-550

## EXPLANATION OF THE NUMBERED PARTS OF THE 2nd part (CODE LINE) ABOVE

1. Size (of movement, see page 12)
2. Jewels (actual count regardless of marking)
   17J = Seventeen garnet or semi-precious jewels
   17RJ - Seventeen ruby jewels
3. Movement configuration (all keywind are listed as H)
   H = Hunting -- winding at 3 -- at right angles to second bit. (Assumes normal dial with 6 at second bit.)
   O = Open Face -- winding at 12 --diametrically opposite the seconds bit.
   I = Interchangeable or Convertible (Hunting or Open Face)
4. Movement Finish Material
   G = Gilt; N = Nickel;
   T = Two-Tone e.g., gold-plated and damaskeened to reveal the nickel underneath.
5. Factory Model Number (when followed by an * (asterisk) means number is assigned by researchers since no factory model number is known to exist).
6. Type of Setting
   K = Key Set; L = Lever Set; P = Pendant Set; S = Stem Set; B = Button Set; (also Pin or Push Set); N = fingerNail Set. (also). called outside push set
7. How Adjusted
   U = Unadjusted
   T = Adjusted for Temperature
   A = Adjusted but number and kind not stated
   TI = Adjusted for Temperature and Isochronism
   TnPI = Adjusted for Temperature, 3 to 6 Positions; and Isochronism (n = 3, 4, 5 or 6)
8. RRG
   Identifies movement as satisfying the requirements for Railroad Grade at the time it was made. (See page >>? for a discussion of what constitutes Railroad Grade.)
9. Factory Grade "name" or "number"
   Always enclosed in quotation marks except when in the 1st Part of the description. When followed by an * (asterisk) means Grade is assigned by researchers since no factory Grade number or name is known to exist.
10. EA 457
    EA-NUMBERED MODEL IDENTIFICATION DRAWING or PICTURE which will be used in all future issues of pocket watch books by Heart of America Press.
11. (ca 1894)
    Approximate year made. May appear on any line of the description and may appear more than once, showing different years, always in parenthesis.

# MOVEMENT& DESCRIPTION CODE

12. (V2 184-1)

Page where illustrated in this or other books by Roy Ehrhardt, William F. "Bill" Meggers, Jr., Col. George E. Townsend or Muir-Kraus, etc. Always in parentheses and may appear on any line of the description.

For example:

BOOKS by William Muir and Bernard Kraus

(MK-OO) = *Marion-United States Watch Co.* by William Muir & Bernard Kraus

13.(Illinois):

Manufacturer of the watch described in this CODE LINE (May appear anywhere on the line or even at the end of Part 1 of the description if all listings under it are by that maker. Always in parenthesis.

14. $450-550:

Retail value range (assumes mint condition). (When preceded by E = estimated.)

## OTHER MARKINGS

RRWI :

Rail Road Watch Inspector. (may appear any place in the description)

SIA

Swiss imitation American

SIARR

Swiss imitation American Rail Road

X:

Where an "X" appears in a description, it means that quantity or descriptor is unknown.

$Not Listed:

Listed on a factory serial number list, or offered for sale either by factory advertisements or factory product line catalogs, but no actual watches have been seen by researchers.

# MOVEMENT & DIAL DESCRIPTION CODE

## ABBREVIATIONS USED IN DIAL DESCRIPTIONS

$Not Valued:

No sales information available or owner of a one-of-a-kind or very rare watch does not wish to place a value on it.

A typical Dial Description might look like this:

1 2 3 3
DS-GE-ART-RR-Dial: Illinois Watch Co.

1st Part: Type:

US - Un-Sunk
SS - Single-Sunk
DS - Double-Sunk
SSIC - Single-Sunk with Inside Circle simulating center sink.
SSDC - Single-Sunk with Depressed Center simulating center sink.
IDS – Imaitation Double Sunk

2nd Part: Material

HE - Hard Enamel (matte surface)
GE - Glass Enamel (glossy surface)
M - Metal

3rd Part: Style

AN - Arabic Numerals
GAN - Gothic style Arabic Numerals
RN - Roman Numerals
FRN - Fancy Roman Numerals (Zig-Zag Serifs)
ART - Arabic Red Track i.e., every fifth minute marked in red outside hour marks.
RR - RailRoad, i.e., **very bold** numerals
24HR - Hours are marked 1 through 12 on outer circle and 13 through 24 on inner circle.
(Some dials are true 24-hour dials and have hours marked 1 through 24 in one circle.)
24HR-AN/RN - Hours are marked 1 through 12 as above plus I through XII

# WHAT IS A RAILROAD WATCH

## WHAT MAKES A RAILROAD WATCH?

The American watch industry and the American railroad industry grew up more or less together. The first watches came from Luther Goddard's bench in the 1820's and the first railroad, the Baltimore & Ohio was founded in 1827. In the beginning years the two industries had little to do with each other but as time passed and railroad passenger travel became more than a novelty, trains became more frequent, traffic density and speed increased, and it became necessary for the railroads to keep close track of time. From that point on, the railroad industry became important to the watch industry and vice-versa.

Therefore, the Railroad Watch evolved in response to the need for timekeeping and as that need became more stringent the watch became more accurate. In other words, the definition of a Railroad Watch evolved from a very simple one before 1886 to a complex one after 1920. Even so, however, there were no universally agreed upon watch standards among the many railroads in existence at the time. Some railroads established their own requirements for acceptable watches and created their own time service departments to enforce and administer these rules. Other railroads left these tasks to outside agencies; in other words, they contracted for their time service. The result was that from about 1886 to 1941 there was considerable variation amongst the American railroads in what was accepted as a railroad watch and consequently, it is impossible to give a precise definition that covers all railroads. Nevertheless, from examination of many individual railroads' time service rules the following table has been prepared which is applicable to the majority of American railroads during each of the time periods specified.

## RAILROAD TIME SERVICE REQUIREMENTS

| | |
|---|---|
| Before 1886 | No requirements |
| 1886-1900 | At least **15 jewels**. Adjusted. Patent regulator. |
| 1901-1905 | At least **17 jewels**. Breguet (overcoil) hairspring. Lever setting. Inspection at regular intervals. |
| 1906-1920 on | Adjusted to **three (3) posiions**.Grade marked movement. No Private Label markings. |
| After 1920 | At least **19 jewels**. Open-face. Adjusted to **five (5)** positions. No 18 size movements. |

## HOW TO READ THIS TABLE

If one applied the foregoing table rigorously one would have to say that every watch made before 1886 was, by definition, a railroad watch. However, that would be unrealistic. Instead, the correct view is that before 1886 only those watches that were considered by their manufacturers to be their better grades would have been recommended to and purchased by railroad men. In addition, one must remember that each of the requirements in the table is additive; that is, the requirements for a later period either replace or supplement those for the earlier periods. Thus, once a Breguet hairspring became a requirement it was a requirement ever after.

# ABBREVIATIONS AND DEFINITIONS

**#** = Number
**/** = And, or, with, connector
**©** = Copy write
**10M** = 10 Micron Plate
**24x36** = 24x36mm
**2B** = Two Barrels
**2W** = 2 Windows
**3H** = 3 hinge case
**4H** = 4 body case
**A** = Adjusted
**ABT** = Arabic Black Track
**ADS** = Arabic Double Sunk
**Ara** = Arabic
**ART** = Arabic Red Track
**Art Deco** = Big Numerals
**ASS** = Arabic Single Sunk
**AWW Co.** = American Watham Watch Co. Watham, Mass.
**Bau** = Baugette Diamonds
**Bez** = Bezel
**Bla** = Black
**Blu** = Blue
**Bu** = Break Up/Scrap
**BU+$** = Break Up + Money
**C** = Carat Diamond
**C** = Sweep/Center Seconds
**Ca** = Year Made (Approx.)
**Chapter** = Time Markers
**Chrono** = Chronograph
**Cloisonné** = Enamel
**Clous De Paris** = Hatching Dec.
**CP** = Crown Push (Chrono)
**Crystal/X-Tal** = Material Used (Original)
**D** = Digital Seconds
**D after number** = Diamonds
**Date** = 31 Days
**DateC** = Date on Chapter Ring
**Day** = Day of the Week
**DD** = Date Day
**DDMMY** = Date Day Month Moon Year
**Dial** = Decoration/Material/Color
**DS** = Double Signed
**DS** = Double sunk dial
**EA#** = Ehrhardt American (Pocket)
**Eng** = Engine Turned (Decoration)
**Eng** = Engraved (Decoration)
**ENW Co.** = Elgin National Watch Co., Elgin, Ill
**Equation** = Complicated Calendar
**FDM** = Fancy Damascene Movement
**Flange** = Outer Dial Ring
**FN** = Frosted Nickel
**FNM** = Frosted Nickel Movement
**FP** = Flat Pushers (Chrono)
**FSG** = Faceted Sapphire Glass
**Function** = Chronograph, Date, etc
**Function** = Tourbillion, Repeater
**G** = Glass Crystal
**GB** = Gold Bezel
**GE** = Glass enamel
**GF** = Gold Filled
**GG** = Green Gold
**Gld** = Gold Color
**GMT** = 24 Hour Time Dial
**GMT** = Greenwich Mean Time
**Gol** = Gold Color
**GP** = Gold Plated
**GPM** = Gold Plated Movement
**Gre** = Green
**GS** = Grand Sonnerie (Repeater)
**Guill** = Guilloche (Engraved)
**H** = Hesalite Crystal
**H6** = Hour Recorder at 6
**HC** = Hunting Case
**Head** = Case
**HFC** = High Faceted Crystal
**HG** = Hand Engraved
**Hour** = 3 Subsidiary Dials (Chrono)
**Hour** = Hour Recorder (Chrono)
**Hour9** = Hour Recorder at 9
**HP +C** = Hammer Price + Commission
**Hr** = Hour
**I5PT** = Isochromism 5 Positions Temperature
**Indicator** = Up-Dn Winding Indicator
**Int** = Integral (No Pins Wrist)
**IW Co.** = Illinois Watch Co.
**K** = Karat Gold
**K** = Key set
**K** = Keywind
**KW Co.** = Keystone Watch Co.
**L** = Lever Set
**LCD** = Liquid Crystal Display
**LE** = Limited Edition
**LE99** = Limited Edition 99 Pieces
**LED** = Light Emitting Diode
**Lum** = Luminous
**M** = $1000 US Dollars
**M** = Manual Wind
**M** = Mineral Crystal
**M3** = Minute Recorder at 3
**MD** = Marked Dial
**MGP** = Micron Gold Plate
**Micron** = Thin Gold Plate
**Min** = Minutes
**Minute** = 2 Sub Dials (Chrono)
**Minute** = Minute Recorder (Chrono)
**Minute3** = Minute Recorder at 3
**mm** = Millimeter
**Moon** = Moon Phase Dial
**Moon6** = Moon Dial at 6
**MSRP** = Manufacturer Suggested
**MSRP/Yr** = Year of Retail Price
**N** = No Seconds
**Name** = Model Name or type
**ND** = Night Day (24 Hour)
**NI** = Not Illustrated
**NLE** = Numbered Limited Edition
**NM** =Non Magnetic
**No.** = Number
**OF** = Open Face Case
**OP** = Oval Pusher (Chrono)
**OT** = Offset Time
**P** = Adjusted to Positions
**P** = Pendent Set
**P** = Plastic Crystal
**P** = Plated
**P** = Platinum (Plat)
**Paris** = Hatching Decoration
**Pav** = Pave
**Pav/110** = Pave 110 Diamonds
**Pave** = Diamond Covered
**PearlS** = Pearl Shell (PS)
**Perpetual** = 4 Year Cycle (Calendar)
**PF** = Partial Frosted
**PG** = Pink Gold
**Pi** = Pin set
**Pin/Pink** = Pink Color
**Porthole** = See Through Back
**Pri** = Power Reserve Indicator
**Price$** = Dealer Pay (Mart) etc.
**Push** = Slide, Button (Repeater)
**Push 9** = Acutator at 9 (Slide)
**Q** = Quartz
**R** = Red – Red Color
**R** = Roman Chapter
**RBT** = Roman Black Track
**RE#** = Roy Ehrhardt Assigned No.
**Ref#** = Factory Reference Number
**Repeater** = Strikes Time
**Retro** = Indicator Hand (O Return)
**Retro** = Power Reserve (Up-Down)
**Retrograde** = Flyback Hand (Retro)
**RGP** = Rolled Gold Plate
**Rose Eng** = Engine Engraved
**Rose Eng** = Engine Turned (Engraved)
**RP** = Round Pushers (Chrono)
**Rpi** = Repeater Power Indicator
**RR** = Railroad
**RRG** = Railroad Grade
**RRT** = Roman Red Track
**RSD** = Roman Double Sunk
**RSS** = Roman Single Sunk
**Rub** = Rubber
**RW** = Rockford Watch Co.
**S** = Sapphire Crystal
**S** = Sku#
**S** = Steel
**S** = Stone Dial
**S** = Subsidiary Second hand
**S/18** = Steel & 18 Karat Gold
**S/G** = Steel & Gold
**S9** = Second Recorder at 9
**SA** = Slide Activated (Repeater)
**Sap** = Sapphire (Stone/Color)
**SB** = Screw Back (Waterproof)
**SB&B** = Screw back & Bezel
**SB&B** = Snap back & Bezel
**SCB** = Sapphire Crystal Back
**SCBP** = Sapphire Crystal Back Porthole (WW)
**SD** = Subsidiary Dial
**Sec** = Seconds
**Seconds** = Small Subsidiary hand
**SFHB** = Screw Front Hinged Swing Ring
**Sil** = Silver or Color
**Silvered** = Silver Plated
**Size** = Case Size (Gent, mm, etc.) (WW)
**Slide9** = Activation Slide @ 9
**SMB** = Sapphire Moon Back
**Sonnerie** = Repeating, Striking
**SP** = Silver Plate
**Split** = Split Seconds (Chrono)
**SR** = Seconds Retro
**SS** = Single sunk dial
**SS** = Stainless Steel
**Stk** = Stick Markers
**Sub Dial** = Subsidiary Dial
**T6P** = Temperature & 6 Positions
**T6PI** = Temperature & 6 Positions Isochromism
**Tac** = Tachometer (Chrono)
**Tac-Fac** = Tachometer – Faceted (Diver)
**Tele** = Telemetric (Chrono)
**Tex** = Texture
**TimeC** = Time Center Seconds (WW)
**TimeN** = Time No Seconds (WW)
**TimeS** = Time Subsidary Seconds (WW)
**Tit** = Titanium (Metal)
**Triple** = Date, Day, Month-Triple Calendar
**Triple12** = Date Month Windows @ 12
**TS** = Triple Signed
**TT** = TuTone
**TZ** = Time Zone (24 Hour)
**TZH** = Time Zone Hands
**U** = Unadjusted
**UD** = Unmarked Dial
**UL** = Unlimited
**US** = Unsunk Dial
**UTC** = Universal Time Coordinated
**Vermeil** = Silver Plated
**W** = White (Whi)
**Week** = 52 Weeks (Indicator) (WW)
**WG** = White Gold
**Whi** = White
**WI** = Winding Indicator (Up-Dn)
**Wind** = Motor (Auto/Manual/Quartz/Electric)
**WT** = World Time
**WTSB** = White Top Stainless Steel Back
**WW** = Wrist Watch
**X** = Computer Code
**X-Tal** = Crystal
**Y** = Yellow (Yel)
**Y/Yr** = Year (4 Year Dial) (Perpetual)
**YD** = Year Decade
**Yel** = Yellow
**YG** = Yellow Gold
**Yr** = Year
**Z** = Computer Code

**RE#**
Numbers assigned by Roy Ehrhardt to make the book more user friendly. Each maker has its own set beginning at RE 1 (one).

**Lot#**
This number is auction house assigned if known. If unknown, or not an auction, has been assigned by Roy Ehrhardt ("REU").

**Name**
Corporate name of watch company or private label.

**A – Case Description**
Describes case as open face or hunting, whether it is hinged, screw back and bezel, swing ring, snap back & bezel, etc.

**B – Dial Description**
Describes dial as decorated, the maker, designer, or standard factory issue. Also indicated whether it is: UN = unsunk, SS = single sunk, DS = double sunk metal, GE = glass enamel, SN = snap on, or other material along with primary colors

**C – Miscellaneous Description**
Includes rest of description that seems important.

**1 – Size**
Size of the movement measured across dial plate in American, Howard sizes, or in millimeters.

**2 – Jewels**
Number of Jewels in movement (some unmarked).

**3 – Configuration**
Indicates movement winding position - O = Open face wind at 12, H = Hunting wind at 3, C = Convertible wind at 12 or 3. K = Key Wind. Case may not match movement configuration.

**4 – Finish**
Finish of movement. N = Nickel, G = Frosted Gilt, TT = Two Tone Gold Plate, GP = All Over Gold Plated, PF = Partial Frosted (Nickel), AF = All Over Frosted (Nickel).

**5 – Model**
Model numbers were assigned by the maker or by Roy or Joe.

**6 – Setting**
P = Pendant (pull out the stem and turn), L = Lever (pull out lever under or in bezel, turn stem), PI = Pin Set in Band (push and turn stem), K = Key Set (back or front)

**7 – Adjusted**
Indicates what is marked on the movement.
P = Positions, A = Adjusted, U = Unadjusted (not marked), This is an indication of what is marked on the movement, not what the company said in their advertisements.

**8 – Grade & 9 – Name**
Name or nameless numbered grades. Some appear on movement and others only on factory material lists. Name of company is usually not an indication of grade.

**10 – EA#**
(Ehrhardt American) The number assigned by Roy in the 1987 book **"Identification and Price Guide"** to **"American Pocket Patches from Beginning to End"** to every American and some foreign made models.

**11 – Year**
Approximate year manufactured using serial number or other information from all available sources.

**12 – House**
Auction houses with **first letter** representing company A = Antiquorium, C = Christie's, S = Sotheby's, HC = Helmet Crott, D = Dorotheum, G = Gisbert Joseph, H = Henry's, P = Peter Ineichen, K = Klaus Nidhedit, H = Herve. Cheyette, S = Skinner, RE = Roy Ehrhardt, B = Butterfield. **Second and third letters** indicates city. NY = New York, G = Geneva, A = Amsterdam, HK = Hong Kong, F = Frankfurt, M = Munich, SF = San Francisco, P = Paris, Z = Zurick, W =Wien, MO = Monchengladbach, D = Dusseldorf, B = Berlin MU = Mutterstadt, L = London, S = Stuttgart REU = Roy Ehrhardt Umatilla, FL, USA

**13 – Estimate**
Indicates **low estimate** in thousands of dollars (M).
PS = Private sale JP = Joe private sale.
**HP +C = Hammer price plus commission** in US$ if known.

**14 – Date**
Date of auction or private sale.

**15 – mm (Millimeters)**
Case size measured the shortest outside distance.

**Note**: Not much attention was paid to originality unless it was obvious to inspection on pictures by case screw, marks, etc. I know that most of the dials are not original to the movements they or on, which is not important to value. 1892, 1908, 1899, 1888, 1872, 1868, & 1860 American models have the same foot pattern. 1857, 1859, 1877, 1883 have the same foot pattern. All 16 size Elgin have the same foot pattern. All 18 size full plate Elgin have the same foot pattern. See page 45 of Roy's Beginning to End Book for foot patterns.

Too much attention is paid to condition of dials especially minor hairlines, nicks, or scratches, especially on rare dials. Condition is more important to wear & damage on cases. Case metal is very important. Do not store watches with plastic crystals, they attract moisture & rust hands & probably alter color. Take off the crystal and wrap it in tissue or a box.

Old radium destroys hands, crystals, dials, and paper they were wrapped in. Do not expose yourself to concentrations of old radium glow in the dark dials. Many dial painters of radium dials died early.

On a lighter note, take this information & build a collection. Remember, The only substitute for knowledge is money.

# HOW TO USE EA-NUMBERS

## INTRODUCTION TO THE EA-NUMBERED IDENTIFICATION DRAWINGS & PICTURES

On the following pages we continue a new concept in pocket watch identification–one that simplifies the process of determining "who made it" and one which works equally well for both factory-marked and private label-marked watches. This approach which was first introduced in *American Pocket Watches - Identification and Price Guide from Beginning to End...1830-1990* employs what we believe has revolutionized the pocket watch identification process by providing an unambiguous way to quickly pinpoint the manufacturer of ANY American-made pocket watch.

Previous methods have relied on the use of photographs or written descriptions. Photographs are usually full of distracting and confusing details which have no identification value and, in fact, hinder the identification process. Descriptions are hard to read and it often is impossible to adequately describe the shape of plates or bridges even though these shapes are crucial to the proper identification of most Models. The EA-NUMBERED DRAWINGS "EA= EHRHARDT AMERICAN" eliminate these deficiencies and provide the user with a clear, concise and complete means for identifying his watch.

The EA-NUMBERED DRAWINGS and PICTURES have been obtained from four sources. By far, the largest number were hand-drawn by Col. George E. Townsend (dec.) directly from watch movements that he examined during his lifetime. However, even such an avid collector as Col. Townsend did not draw every make and model of American pocket watch. Consequently, where no Townsend drawing is available we have had to substitute an advertising catalog or factory parts list illustration or, as a last resort a photograph. Eventually, we hope to replace these illustrations and photographs with DRAWINGS. (At this point you might want to read what Col. Townsend wrote about his drawings when they first were discussed in his book *The Watch That Made The Dollar Famous,* 1974.) Although all known railroad-related EA-NUMBERED IDENTIFICATION DRAWINGS and PICTURES are presented here, there are some watches which are not represented because they are so rare. In a few instances we know of watches that exist but we have been unable to find a representative illustration or obtain a movement to photograph. We seek your help on these.

## HOW TO USE THE EA-NUMBERED IDENTIFICATION DRAWINGS & PICTURES

There are two ways to use these EA-NUMBERED IDENTIFICATION DRAWINGS and PICTURES. Either to confirm your previously made identification when you have found a watch described in the alphabetical listings that you believe is the same as your watch, or to identify the make and model of your watch when you are unable to find an alphabetical listing that matches the markings on your watch. (This includes those watches that bear no useful identification marks at all.) These procedures are described in detail in "How to Use This Book", page 6.

Below each EA-NUMBERED DRAWING and PICTURE you will find the maker's name or, in the case of private labels, the name of the jeweler or retailer for whom the watch was made. Also shown are the movement size, style (hunting or open face), finish (gilt or nickel), model number, and type of setting mechanism.

No style is shown for key-wind watches since it simply depends on how they are cased. (In the listings they are always shown as "H".) Under EA NUMBERS 452 through 507B you will find additional information such as movement weight (useful when buying gold-cased watches) and dial foot, case screw and setting lever locations (useful when looking for original dials and cases for a specific model). This information was developed for Illinois watches during the preparation of *American Pocket Watch Encyclopedia and Price Guide, Volume 2.*

It turns out that the combined locations of dial feet, case screws and plate screws are unique to each manufacturer and, for a given Model, are the same regardless of whether the watch is factory or private label-marked. Therefore, if these locations are put in tabular form they, alone, can be used as a positive means for identifying any American-made watch, EVEN IF NO LISTING CAN BE FOUND AND NO EA-NUMBERED DRAWING OR PICTURE SEEMS TO PROPERLY MATCH. The process is more time-consuming than use of the listings and drawings and it requires that you very carefully determine the locations of these various parts–not always easy to do in a crowded mart room–but it can be used at least to identify make and model when all else fails. You will find a tabulation of dial foot locations, movement weight and size and EA NUMBER beginning on page 27. The list is not complete but has been added to since the first edition of *"Beginning to End"* was printed.

We hope that after you have used the EA-NUMBERED IDENTIFICATION DRAWINGS and PICTURES sufficiently to be comfortable with the process, you will share our enthusiasm for this approach to pocket watch identification. If not, then we have failed in our attempt to provide you with the best and easiest to use identification and price guide for American Pocket Watches.

### WEBB C. BALL WATCH CO.
### Cleveland, Ohio & Chicago, Ill.
### 1879 to Present

Neither Webb C. Ball nor The Ball Co. manufactured any watches themselves. Mr. Ball ordered both standard production watches and watches incorporating his ideas and patents from the major American watch companies and selected Swiss watch companies. Everything engraved on those contract movements (Ball trademarks and patent dates) was done under specific instructions from Ball, except the serial number which was either the actual serial number used by the factory or a shortened one using a "B" prefix, except the 16 size Hamiltons which appear to be sequential.

Ball purchased watches from the following American watch companies: Aurora, Elgin, Hamilton, Hampden, Howard, Illinois, New York, and Seth Thomas, and from various Swiss companies. It appears that beginning about 1893 all Ball watches were sold cased.

All of the watch movements and cases were brought together first in Cleveland, and later in Chicago, to be cased and timed in his store.

Ball Official Railroad Standard watches were second to none in their ability to keep accurate time.

A complete four-page list of all Ball serial number runs appeared in the February 1983 issue of The Pocket Watch Newsletter (Volume 1, No. 11), and that single issue is available by sending $5.00 to Pocket Watch Newsletter, P.O. Box 9808, Kansas City, MO 64134.

| 1930 | 801,000 | prefixed | B 639,001 | |
| 1935 | 803,000 | the last 6 | B 640,001 | |
| 1942 | | numbers | B 650,001 | |
| 1942 | | with a "B" | 2B 001 | |

Hamilton probably sold watches to Ball maybe as late as the 60's.

All of he 16 S Illinois movements I have seen have the serial numbers in the 800,000 range and the 12 S in the 400,000 range with the prefix "B".

Hampden 18 S, 759,657–759,760–761,660–866,975.

Howard 18 S, 226,201–307,456–308,146–308,449.

Seth Thomas 18 S, serial number 95,509.

The "Time Ball Special" is a Swiss fake.

No Swiss Ball watches are listed here.

Detent Box Chronometer

NOTE: EA 205 – EA 206 18 SIZE
Elgin Keywind movements with a serial number of less than about 200,000 (1874) were made with dials marked "National Watch Co." the exact serial number where the marking change was made to "Elgin National Watch Co." is not know to Roy and Bill at this time.

There are two types of lever setting on stemwind movements. The earliest was a pivoted lever at about 20 minutes or the dial. Later the pull-out lever shown in EA 206, at 25,5 minutes, was adopted. The serial number at which this change occurred is not known to us at this time.

## ILLINOIS

**NOTE:** Key model identifiers are underlined.

The EA Numbered Identification drawings and pictures have been perfected by William "Bill" Meggers for Illinois. All EA Drawings will eventually be brought up to these standards when enough time & researchers can be found to do the work. If you are interested in helping with this let me know. Roy.

| 92,000,000 | 1940 |
| 96,000,000 | 1944 |

This list applies only to dollar watches non-jeweled.

*First contract watches made in 1891 by the Waterbury Clock Co., and others later made the Ingersoll—Trenton watch. The company was absorbed by the Waterbury Clock Co. in 1922 and the product line of Ingersoll continued until 1944. Ingersoll Limited Co. is still in business in England, using the same old Ingersoll trademark on their product line. Prices on Ingersoll watches go up to $350, depending on the name on the dial and/or the embossing on the case. There are 164 of them listed and priced in Col. George Townsend's book, "The Watch That Made the Dollar Famous". Dollar watch collectors prefer Ingersoll.*

**IMPORTANT NOTE:
All watches in book listed alphabetically by name as it appears on movement.**

### NEW ENGLAND WATCH CO.

Waterbury, Conn. 1898—1912

#### NAME CHANGES

Benedict & Burnham Co.
Waterbury, Conn.
1883—1880 Reorganized as
The Waterbury Watch Co.
Waterbury, Conn.
1880—1898 Reorganized as
New England Watch Co.
Waterbury, Conn.
1898—1912 Sold to
Robert H. Ingersoll & Bros.
Trenton, N.J. & Waterbury, Ct
1881—1912 Sold to
Waterbury Clock Co.
Waterbury, Conn.
1922 to 1944 Sold to
U.S. Time Corporation (Timex)

*NOTE: Many of the models invented and manufactured by The Waterbury Watch Co. were continued under The New England Watch Co., which accounts for them being marked both ways.*

*Most of the models were not standard size and will not fit standard cases. The typical watch was push to set, with the case and pendant one unit and the movement another. Most cases were nickel silver or gold plated and the price range is given only for a cased watch. Movements without a case have very little value. Some of the movements near the end of production would fit standard size American cases, but were still sold as cased and timed at the factory.*

*The Duplex or Pin Lever Escapement was used in the watches and is very hard to repair. The value for a non-running or incomplete watch should be less than 50% of one in running condition. These old, interesting watches have been overlooked by collectors.*

*The early models are shown under The Waterbury Watch Co. on page XXX.*

## NEW HAVEN WATCH CO.

New Haven, Conn. 1883—1887

### NAME CHANGES

New Haven Watch Co., New Haven, Conn.
1883—1887 Name Change to
Trenton Watch Co., Trenton, N.J.
1887—1908 Sold to
Robert H. Ingersoll & Bro.
Trenton, N.J. & Waterbury, Conn.
1908—1922 Sold to
Waterbury Clock Co., Waterbury, Conn.
1922—1944 Sold to
U.S. Time Corporation (Timex)

# NEW HAVEN EA 627 - EA 639

NEW HAVEN CLOCK CO.
New Haven, Conn. 1853–1946
Reorganized as
New Haven Clock and Watch Co.
New Haven, Conn.
1946–1956 Filed Bankruptcy

*NOTE: Began making large watches in 1880. Made about 40,000,000 total wrist and pocket watches. Began making wrist watches in 1917.*

*Some Comic Character pocket watches have a value of over $200 and are very popular with Dollar watch collectors.*

### NEW YORK STANDARD WATCH CO.

Jersey City, N.J. 1885—1929
In 1903 Sold to
The Keystone Watch Case Co.
Philadelphia, Pa. & Riverside, N.J.
1885—1927
Production was continuous at the New
Jersey plant from 1885—1929.

Approximate Production Dates

| Serial No. | Date |
|---|---|
| 1 | 1887 |
| 503,000 | 1893 |
| 1,120,000 | 1894 |
| 3,623,000 | 1900 |

*NOTE: Not much research has been done on New York Standard on serial numbers. Some have letter prefixes, some lots all have the same number, and some lots are not numbered. It is estimated they made between 10 and 20 million watches.*

Dueber—Hampden Watch Co., Canton, O.
1923—1930 Sold and Moved
Equipment and some employees to Russia.

New York Watch Co.
Production Dates & Serial Number Runs

| Date | ¾ Plate Keywind & Stemwind – Model 1 Springfield | ¾ Plate, 16 & 18 Size King, Norton, Clark & Foot | 18 Size, Long & Short Balance Cock Full Plate |
|---|---|---|---|
| 1867 | 1 | | |
| 1868 | 100 | 4,000 | |
| 1869 | 500 | 4,500 | 10,000 |
| 1870 | 700 | 5,700 | 16,000 |
| 1871 | 1,100 | 6,200 | 20,000 |
| 1872 | | 7,000 | 29,000 |
| 1873 | ¾ Plate, 16 Size, Curved Cock | 7,800 | 44,000 |
| 1874 | Bond, King, Norton | 8,500 | 51,000 |
| 1875 | 9,000-9,300 | 9,000 | 58,000 |

Serial numbers were blocked and all were more or less produced at the same time. E. W. Bond was offered for sale by Hampden from 1876 to as late as 1892, but was invented and assigned serial numbers by New York Watch Co.

## POTTER BROTHERS
Chicago, Ill. 1870–1875

Potter Brothers
Chicago, Ill. 1870–1875 Name Change
W. C. Potter
Chicago, Ill. 1875– ?
Albert Potter
1876 Moved to Switzerland
Charmilles Watch Co.
Geneve, Switzerland
1893–1900

*Potter watches in original cases are highly prized by both Foreign and American collectors. The pieces believed to have been made by Potter may bring up to $50,000.*

*Both A.H. & W.. C. contracted with Swiss companies to produce watches with their own trademarks to sell in their stores, and do not bring the high prices of their own work.*

*The names and calendar above do not properly fill in all of the important aspects of the Potter Bros. productive life. More research is needed.*

## GEO. P. REED
Boston, Mass. 1858—1869 & Beyond

*NOTE: Filed over 20 patents from 1857 to 1869, among them the patent on the Howard Going Barrel. Townsend says he made over 200 Chronometers and about 300 Lever watches.*

*The watches in original cases by G.P. Reed are prized pieces and are almost all different in one or more ways. Future prices are hard to predict, but now they run between $5,000 and $15,000.*

The United States Watch Company
1865-1874
Marion Watch Company
1874-1876
Empire City Watch Company
1876-1877
Independent Watch Company
(Howard Bros., Fredonia, N. Y.) in 1878
Purchased most of remaining
movement stock & some Machinery.
1878-1883 Reorganized as
Fredonia Watch Co.
Fredonia, N. Y.
1883-1885 Sold to
Peoria Watch Co.
Peoria, Ill. 1885-1895

| Serial No. | Date |
|---|---|
| 1,001 | 1867 |
| 10,000 | 1868 |
| 24,000 | 1869 |
| 160,000 | 1872 |
| 289,000 | 1874 |
| Marion | 1874 |
| Empire City | 1876 |
| Royal Gold | 1876 |

Current statistical projections indicate that total production of the USWC was only some 50,000 watches (MK 187).

Historical data and estimated production dates above are based on information included in the new NAWCC book "Marion, A History of the United States Watch Company" by William Muir and Bernard Kraus. This definitive work is available from NAWCC, 514 Poplar St., Columbia, PA 17512-Phone 717-684-8267.

¼ Plate Cock & Bridge

All known USWC models have been identified in the Muir Kraus book on "MARION" the basic models were then broken down into grades (trade-marks) and then each grade was broken down further into model numbers depending on finish variations. The unique thing about Marion was the large number of variations which resulted in a very large number of these detailed model numbers, many of them even more complex with fractional numbers like 1/4, 1/3 or 1/2. (Also see Hoban-Guido article on dating Marion watches. Feb. '86 Bulletin #240).

To simplify this rather complex USWC system of identification, the model numbers shown in the EA NUMBERED IDENTIFICATION DRAWINGS & PICTURES and throughout this book have been assigned arbitrarly by the author to aid in categorizing (movement styles) and factory listed sizes. Note that these assigned Model numbers are followed by an asterisk, Model 1* through Model 6*.

1. Replaced Models 983 and 985.
2. Finished as Model 983, quantities produced included with that given for Model 983.
3. Bridge model.
4. Lady Hamilton engraved on train bridge.
5. Finished as Model 985, quantities produced included with that given for Model 985.

# HAMILTON - 16 SIZE MOVEMENT PRODUCTION FIGURES

## 16-Size Movements

First models were pendant set only; later models were lever set when accepted for service on the railroads. All were standard size movements and until 1911-1912 had dials with four (4) feet. After this date, dials with three (3) feet were used.

## ALPHABETICAL LISTINGS

## AAA

**A & W** (Trenton)
16S-7J-ON3*L-U-"XX" EA 874 ........................................ (EM 10001) $30-50
0S-7J-HN1*P-U-"100" EA 883 ........................................... (EM 10002) $25-40
A in a Diamond, trademark —see Dollar, ca 1901
18-size mint complete cased watch EA 114-117 (Ansonia) (EM 10003) $25-50
**A. Lincoln** —see Lincoln, A.
A.& W. Special (New Haven)
Fancy colored dial —see Dollar EA 638 ............................. (EM 10004) $15-25
**A.T.& S.Fe.-Train Despatcher-Numa Frechelin-850-21 Jewels-6 Adjts-Heat & Cold** SS-GE-Montgomery AN-Dial: A.T.& S.Fe. Train Despatcher-21 Jewels-Swiss (Swiss Imitation American)
18S-7J-ONSL-U-"SIARR"ES 97..................................... (EM 10005) $100-150
**A.T.& S.F.** (or) **AT&SF RR Standard-C.W. Smith, Kansas City, Mo.-Anti magnetic-Adjusted** (Atchison, Topeka & Santa Fe Railway Co.)
18S-15J-HN1*L-A-RRG"C" EA 723 (Peoria) ca 1890...... (EM 10006) $350-450
Note: As found, this watch had a dial marked AT&SF RR-M.B. Wright which may or may not be original and correct.

### AMERICAN WATCH CO. - WALTHAM WATCH CO. GRADE NAMES

Identifying Waltham watches will be more accurate and quicker by using a Waltham serial number list available from Heart of America Press. Many Grades cannot be identified precisely without reference to the serial number list. Waltham Watch Co. also made the following named grades, which are listed alphabetically under their grade names elsewhere in this book.

**A.W.Co.**
**A.W.W.Co.**
**Adams St.**
**Am'n. Watch Co.**
**Am. Watch Co.**
**American Watch Co.**
**Appleton, Tracy & Co.**
**Bartlett, P.S.**
**Beacon**
**Bond Street**
**Broadway**
**Central Park**
**Chronographs**
**Colonial R**
**Crescent Park**
**Crescent Street**
**Diamond**
**Duke**
**Earl**
**Ellery, Wm.**
**Ensign**
**Envoy**
**Equity Watch Co.**
**Hillside**
**Home Watch Co.**
**Lady Waltham**
**Marquis**
**Martyn Sq.**
**Maximus A**
**Nashua Watch Co.**
**Park Road**
**Parker, C.T.**
**Premier**
**Repeaters**
**Riverside**
**Riverside A**
**Riverside Maximus**
**Robbins, R.E.**
**Royal**
**Ruby**
**Sapphire**
**Seaside**
**Sol**
**Sterling**
**Tracy, Baker & Co.**
**Traveler**
**Vanguard**
**W.W.Co.**
**Watson, J.**

### A.W.Co.-WALTHAM, MASS.

(American Watch Co.)
Research by:
Vernon Hawkins - Roy Ehrhardt

A.W.Co. is listed **Highest Jewel-Highest Quality-Largest Size first, decreasing to the Lowest Jewel-Smallest Size**. Movements also marked "Riverside", etc. will be found listed under those Grade names. For Repeaters & Chronographs see the first listing for American Watch Co.

**A.W.Co.-Waltham, Mass.** may also be marked **Waltham Standard**
18S-17J-ON92L-A-RRG"AWCo" EA 29 (V1-35) ..........(EM 10007) $350-500

14S-14J-HG74L-U-"CH" EA 63 (V1-61 Chronograph ..... (EM 10436) $80-150

**NOTE**: The Chronograph and Repeater movements, above, are valued as if they are mint and in an original case, but unless a value for the cased watch is shown, you must add the value of the case to obtain the total value of your watch. On the other hand, original cases are much rarer than movements so loose movements have little chance of ever being cased and their value, as such, will be only a fourth to a half of that shown.

Repeaters were cased in a variety of maker's cases including AWCo. For factory chronograph cases, see the following table. These watches were made for only a few years at Waltham and they are a unique and important part of American horology, presently being overlooked by many collectors. The repeaters are the only ones that are American-made and some varieties appear to be very rare.

### AMERICAN WALTHAM ORIGINAL LUGRIN'S PATENT MINT CHRONOGRAPH CASES

(Gold cases are marked "AWCo" or "Waltham" )

(Values are based on 400 dollar gold; weights are approximate.)

18K Hunting 60 DWT Plain-Polish .......................... (EM 10437) $1250-1500

### AMERICAN WATCH CO.-WALTHAM, MASS.

Research by:
Tom Fowler - Bill Tapp - Roy Ehrhardt

"American Watch Co." grade is listed **Highest Jewel-Highest Quality-Largest Size first, decreasing to the Lowest Jewel-Smallest Size.**

Some early 1860 and possibly all 1862 Models of all grades have the Nashua Watch Co. serial number along with the American Watch Co. serial number stamped under the dial. The runs where these are found are 20-size 1862 Model: 50,001-50,093 & 50,095-50,300 and 16-size 1860 Model: 50,094, 50,301-50,500 & 55,001-55,500.

### ANSONIA CLOCK CO.

(Dollar Watches)

Research by:

Ralph Whitmer - Col. George E. Townsend (dec.)

Names used on Ansonia pocket watches are listed alphabetically. When the common or less interesting names appear on the early and more expensive movements, this has the effect of increasing their value to that for the same quality of movement in its case. All model numbers are assigned.

### ARISTON

(by Illinois Watch Co.)

Research by:

William F."Bill" Meggers, Jr.

Ariston was a private label of Marshall Field & Co., Chicago, Ill. These listings were compiled from actual watches, supplemented by 1909 to 1912 advertisements that said

# ALPHABETICAL LISTING

**EACH WATCH IS LISTED ALPHABETICALLY** by what is marked on the movement. Named Grades are listed under their names, last names first; for example, B.W. **Raymond** is listed under **Raymond**; while **Vanguard** is listed under **Vanguard** and **Lord Elgin** is under **Lord**

" all are in marked Ariston cases from nickel to solid gold, and in a Circassian walnut presentation box, with timing certificate".

## AURORA WATCH CO.

Research by:
Donald Hoke - Greg Frauenhoff
Ed Keift (dec.) - Roy Ehrhardt

Aurora Watch Co. is listed **Highest Jewel-Highest Quality-Largest Size first, decreasing to the Lowest Jewel-Smallest Size**. Pendant-set movements are less common than are lever-set ones. They are identified by grade numbers 11 through 21.

EA 128 is Aurora's "New Model". It was used almost exclusively for select private label-marked movements. Very few "New Model" movements marked "Aurora Watch Co." are known.

Identifying Aurora grades can be difficult. Help is available in the form of a reconstructed Aurora Watch Co. serialized production list, available from Greg Frauenhoff, P.O. Box 1536, Bolingbrook, IL 60440

### BALL, WEBB C.-BALL & CO.-BALL WATCH CO.-BALCO

Cleveland, Ohio - Chicago, Ill.
San Francisco, Calif.-Winnipeg, Canada
Research by: Roy Ehrhardt - William F. "Bill" Meggers, Jr.
Walter Kroeker - Arthur Zimmerla - Larry Ehrhardt

**Note:** Webb C. Ball contracted with many watch factories to make watches for him and did not make any himself. Watches by the contracting companies are listed in this section in the following order.

American Waltham
Aurora
Elgin
Hamilton
Illinois
Keystone Howard
New York
Rockford

| | |
|---|---|
| Hampden | Seth Thomas |
| E. Howard | Swiss |

**NOTE:** All Ball Watch Co. values assume the correct mint dial is affixed.

**The assignment of letter suffixes such as "E" to the "999" in the code lines, is shown only on an early Hamilton factory serial number list.**

## BALL BY AMERICAN WALTHAM WATCH CO.

(Commonly known as Waltham Watch Co.)

**NOTE:** Waltham-made Ball watches were special factory runs and do not have a corresponding Waltham Grade number. All Official RR Standard ("OS") watches are "RRG" by definition; Commercial Standard ("CS") are not. Values include the correct dial, marked Official RR Standard, which is worth up to one-half of the total value. An incorrect or badly damaged correct dial hurts the value considerably. For value of dial alone see "Ball Pocket Watch Dials" at the end of this Ball Section.

## BALL OFFICIAL RR STANDARD

23, 21, 19, or 17 JEWELS 16-SIZE

**Ball & Co.-Cleveland, O.-Official RR** (in Gold Seal) **Standard- 23, 21, 19** or **17 Jewels-Adjusted-Trade Mark-Sapphire Pallets-Pat. Nov. 17, 96** ca 1899 Old style dial with small herald & tall "RR"

16S-23J-ON99L-A-"OS" EA 150 (one seen) ................(EM 11072) $6000-8000
16S-23J-HN99L-A-"OS" EA 149 ................................(EM 11073) $None seen
16S-21J-ON99L-A-"OS" EA 150 ....................................(EM 11074) $125-250
16S-21J-HN99L-A-"OS" EA 149 ................................(EM 11075) $None seen
16S-19J-ON99L-A-"OS" EA 150 ....................................(EM 11076) $125-250
16S-19J-HN99L-A-"OS" EA 149 ................................(EM 11077) $1500-2000
16S-17J-ON99L-A-"OS" EA 150 ....................................(EM 11078) $100-200
16S-17J-ON99P-A-"OS" EA 150 ....................................(EM 11079) $100-200
16S-17J-HN99L-A-"OS" EA 149 ................................(EM 11080) $1500-2000
16S-17J-HN99P-A-"OS" EA 149 ................................(EM 11081) $1500-2000

These watches marked "Ball & Co." should bring more money than those marked "Ball Watch Co." but collectors aren't paying any attention. There may be more varieties, e.g., pendant set, etc., than are listed above.

Add for gold seal with Brotherhood marking. ..................(EM 11082) $200-250
Add for black Brotherhood marked dial. ..........................(EM 11083) $200-400
Add for Brotherhood dial in color. ....................................(EM 11084) $300-500

**Ball Watch Co.-Cleveland, O.-Official RR** (in Gold Seal) **Standard-21, 19** or **17 Jewels-Adjusted-Trade Mark-Sapphire Pallets-Pat. Nov. 17,96** ca 1899-1904

16S-21J-HN99L-A-"OS" EA 149 (one seen) ................(EM 11085) $4000-6000
16S-21J-ON99L-A-"OS" EA 150 ....................................(EM 11086) $125-200
16S-19J-HN99L-A-"OS" EA 149 ................................(EM 11087) $1500-2000

## BALL BROTHERHOOD or ORDER MARKINGS

OFFICIAL "BLE","BLF", "B of LF&E", "BRT", "ORC", or "ORT" STANDARD 21, 19, or 17 JEWELS 16-SIZE

(American Waltham Watch Co.)

**NOTE:** All of the following Brotherhood or Order markings with the same number of jewels will have about the same value. One of the monograms: **"BLE", "BLF", "B of LF&E", "BRT", "ORC"** or **"ORT"** will appear in a Gold Seal on the movement and in black or color on the SS-GE-Dial. Values include the correct dial, which is worth up to one-half of the total value. An incorrect or badly damaged correct dial hurts the value considerably. See the 18-size Hamilton Ball listings for an explanation of the Brotherhood or Order markings.

**Ball Watch Co.-Cleveland, O.-Official** (Brotherhood or Order monogram in Gold Seal) **Standard-21, 19** or **17 Jewels-Adjusted** or **Adjusted 5 Positions-Trade Mark-**

### BALL JEWELERS NAMES
### OFFICIAL RR STANDARD 18-SIZE

Hamilton Watch Co.

**NOTE:** According to an advertisement in an 1895 issue of Locomotive Engineers' Monthly Journal The Webb C. Ball Co. appointed the following jewelers as agents for their Official R.R. Standard watches. Whether these jewelers were required to purchase Ball watches bearing their names or whether this was voluntary is not known but it appears that all of them did. Ball jewelers names are listed alphabetically. For dials see end of listing.

### CORRECT DIALS

Ball Jeweler Names

All of the foregoing Ball Jewelers name watches except Kirk have been seen with a sunk-seconds glass enamel Official RR Standard dial containing the Jeweler's name in the bottom line of the Trade Mark and the values shown include the correct dial which is worth up to one-half of the value shown for the movement. An incorrect or badly damaged correct dial hurts the value considerably.

Above value includes black or white sweep seconds Dial: Ball-Incablock

**NOTE:** There are other Swiss wrist watches made for Ball not listed here, e.g., Garland.

### BALL POCKET WATCH DIALS

Typical Ball dials: Always the hour markers are round and black (some say small black balls), with the numerals a very distinctive shape. Webb C. Ball was in favor of sunk-seconds, plain dials, with no Montgomery-type minute numbers. He and H.S. Montgomery (who patented the Montgomery dial) debated the merits of their dials in trade publications of their day. It is not known whether Ball eventually softened his position in deference to the pressures of commerce or what caused the change, but double-sunk Ball dials have been found on three types of 18-size watches: the Aurora-Ball, one style of the 17-Jewel Railroad Watch Co. movement, and the early 17-Jewel Ball & Co. Hamilton movements marked "Single Roller". In addition, a package of ten unsold double-sunk 18- size Montgomery Ball dials was found by S. LaRose in the residue of the Elgin Watch Company, and a package of six unsold 16-size Elgin single-sunk Ball dials was found also, but no 16-size Elgin Ball watches have been seen. Single-sunk Montgomery Ball dials also have been seen on some late production Hamilton 18-size and some 16-size 999-B and 16-size Illinois Ball watches.

### BALL TRADE-MARK POCKET WATCH CASES

Except for the very earliest Ball watches, all of the Railroad Grade movements were sold cased by Ball. Most are base metal (Silveroid) or 20 or 25- Year gold-filled and all are clearly marked with some reference to Ball inside: either the early mark, BALL MODEL, or the later, Ball Official RR Standard, added to the case maker's trademark. Canadian Ball cases are marked BALCO. Absence of this proper case hurts the value of the watch significantly more than just the value of the case since empty Ball cases are almost impossible to find. The values shown below are for mint cases. Evidence of wear affects these values. Just a small line of brass showing on a gold-filled case reduces the value to half or less of that for a new case, and very few new cases will be found.

### BURLINGTON WATCH CO.

(by Illinois Watch Co.)

Research by:
William F. "Bill" Meggers, Jr.

Value includes the proper dial marked Burlington or including the word, "Burlington". All Burlington watches were sold, originally cased in gold-filled Burlington Watch Co.-marked cases, by an unidentified Chicago-based company (V2-295). Burlington Watch Co. watches were accepted in railroad time service by many railroads, notably the Union Pacific, until the early 1940's. For values of dials and cases see end of this section.

## COLUMBUS WATCH CO.

Research by:

Randy Chapin - John Miller - Roy Ehrhardt

Named Grades are listed highest Grade first. Nameless numbered grades are listed **Highest Jewel, Highest Quality, Largest Size first, decreasing to the Lowest Jewel, Smallest Size**. Movements were marked Columbus Watch Co. before 1894 and New Columbus or New Columbus Watch Co. after 1894.

In addition to the named grades listed below, Columbus Watch Co. also made the named grades: **Champion, Jackson Park,** and **North Star.** These will be found listed alphabetically under their names elsewhere in this book. No Serial Numbers List is Available For Columbus

### COLUMBUS IMPORTED MOVEMENTS

Research by:
Randy Chapin - Horace Danner
John Miller - Roy Ehrhardt

Movements are marked in various ways: Columbus Watch Co., C.W.Co., Col. Watch Co., Col. Watch Mfg. Co., and Columbus Watch Co.; with or without Columbus, Ohio. Other markings are: Gruen's Pat.Pinion, Gruen's Improved Patent Safety

Pinion and Gruen's Patent. All are made from Swiss parts. The 18-size adjusted grades probably were Railroad Grade. Listings are in **decreasing** order of size.

**NOTE**: The Model 1870 Crescent Street Grade is historically important as the first American watch to be advertised as a Railroad Watch. For illustrations see (V1-25) and (80-53). It also is the only watch to have been made in four different setting types. Each of these requires a special case and original cases are much scarcer than the movements so loose movements have little chance of ever being cased and their value, as such, will be only half of that shown above. Case values will depend on material, type of setting and condition.

## DEPENDON

(by Illinois Watch Co.)

Research by:

Roy Ehrhardt - William F. "Bill" Meggers, Jr.

Dependon was a private label of the John V. Farwell Co., Chicago. Values include the correct Dial: Dependon. All of these listings are from a 1917 advertisement, using the serial numbers from the advertising cuts to determine Grade. Researchers have seen only a few examples of this Private Label. We have no sales recorded to indicate value. Therefore, values shown are based on other Private Labels of comparable quality.

## DOLLAR WATCHES

Research by:
Ralph Whitmer - Col. George E. Townsend (dec.)
Roy Ehrhardt

All Dollar watches are listed alphabetically elsewhere in this book by the **name** or other **marking** that appears on the dial. Immediately following the name will be: "see Dollar". The value shown is for a complete mint dial, hands, movement and case, in other words, a complete mint cased watch. Often a range of EA numbers are shown (to direct you to the EA drawings of the correct maker) but no specific EA number is given. We have not given a specific EA number because we don't know the correct one. Most of the Dollar watch names (nearly always appearing just on the dial) were taken from George E. Townsend's paperback book, "The Watch That Made The Dollar Famous", published in 1974, and other sources. You can be a great help when you correctly match a name to the EA number, by sending us the correct EA number and size information which we will include in the next edition of this book. For future editions we also need all of the Dollar watch names not included in this issue. This new infor-mation must be confirmed as correct, either by showing one of us the watch or by sending an actual photograph, along with the movement size.

All Dollar watch sizes (unlike all other watches for the purpose of this book) are measured across the **back** plate or, if the movement is square or asymmetrical, across the inside back of the case. Many of those shown may not be quite correct by the above statement due to confusion in reporting.

## WHAT IS A DOLLAR WATCH?

by Col. George E. Townsend (dec.)

The classification of a so-called Dollar watch is many things to the different collectors. My classification is for the collector who desires to collect and put them into a proper category for his needs. Some collectors may say the Waterbury Long-wind and the Auburndale Rotary are not in the category of a Dollar watch but I wish to include them here as they certainly are the grandparents of the watches that made the Dollar famous.

### A DOLLAR WATCH IS:

First, it is a practical timepiece. Second, it should sell for a price that a common man of the day could afford. (As we previously saw) Mr. Hopkins hoped it could sell for about fifty cents in 1875. The Auburndale Rotary watch sold for ten dollars in 1877. The Benedict & Burnham watch sold for three and a half dollars in 1878. Robert Ingersoll sold his first watch for one dollar in 1892. Others followed within this price range. Third, it should be a non- jeweled movement. (Some did have a few jewels.) Fourth, the case and movement should be produced as an integral unit. Thus, .... (with few exceptions) the movement cannot be installed in the standard American watch cases. Fifth, the dial should be paper on brass, or other inexpensive material. All Dollar watches may not meet all of these classifications but should generally meet most.

## ABOUT MY DRAWINGS AND IDENTIFICATION TECHNIQUES

by Col. George E. Townsend (dec.)

These scale drawings (See EA NUMBERED DRAWINGS for Dollar watches) are of specific watches and are intended to be used as a comparison to identify watches you may have in your collection. The important features in identifying a watch are the general shape of the back plate, location of the barrel bridge, balance wheel, cock and winding mechanism. Over the years the minor changes or variations in the location and size of the screws, shape of the regulator, style of the balance wheel and style of printing on their movements were made. All these variations are not shown and are not important in making an identification of the maker.

The companies like Auburndale, Bannatyne, Benedict & Burnham, Ingersoll, Ingraham and others sometimes put their name either on the dial, case or movement, which makes it apparent who made it. There are many watches that do not have the maker's name on them and, thus, identification is difficult unless you have another watch to use for comparison. This is where my line drawings are useful. The multitude of names used on the dials are not a positive means of identification, but with other features like the patent date and my line drawings the maker usually can be determined. Many companies used identical or similar names over the years. Many of the watches were used in advertising and the dials or the cases were marked to show a slogan or company name. Also in many instances they were purchased from more than one maker by the advertiser.

The date of manufacture of the Dollar watches is in many cases easy to determine. In the case of Ingraham watches this is very easy and accurate because the date of manufacture is stamped on the back plate of the watch. Examples: 3 18 = March 1918, 64/2 = Feb 1964, 53 = 1953. Westclox had a similar date system on their watches. Others, such as Auburndale, Bannatyne and Ingersoll, used serial numbers and these can be equated to approximate production dates. Other makers can only be dated for the period the company made watches. For example: Benedict & Burnham: 1878 to 1880 and Waterbury Watch Co.: 1880 to 1891.

"What Is A Dollar Watch " is reprinted from pages 4 & 5 of the book, *The Watch That Made The Dollar Famous* by Col. George E. Townsend, published in 1974 and available from Heart of American Press.

## ELGIN NATIONAL WATCH CO.

Research by:
John Miller - Roy Ehrhardt - Albert Griner

---

Elgin is listed Highest Jewel-Highest Quality-Largest Size first, decreasing to the Smallest Size-Lowest Jewel. Elgin also made the following Named Grades which are listed alphabetically under their grade name elsewhere in this book.

**Advance**
**Age**
**Avery, T.M.**
**Chief**
**Culver, H.L.**
**Dexter St.**
**Fargo, Chas.**
**Farwell, J.V.**
**Father Time**
**Ferry, W.H.**
**Frances Rubie**
**Gail Borden**
**Lady Elgin**
**Lady Raymond**
**Laflin, Mat.**
**Leader**
**Lord Elgin**
**Ogden, M.D.**
**Overland**
**Raymond, B.W.**
**Ryerson, J.T.**
**Taylor, H.H.**
**Veritas**
**Wheeler, G.M.**

Identifying Elgin watches will be more accurate and quicker by using an Elgin serial number list, available from Heart of America Press. In most cases it will be impossible to identify the Grade without this list.

---

### 23 JEWELS ADJUSTED 16-SIZE

**Elgin-847-23 Jewels-5 Adjustments-Cal. O2/SX9**
Metal 24HR Montgomery AN-Dial, unique size case
16S-23J-ONSL-5A-RRG"847" like EA 319 .........................(EM 13593) $50-75
Mint in 10K RGP SB&B RR OF case ...............................(EM 13594) $100-125

### 23 JEWELS ADJUSTED 12-SIZE

### GODDARD, LUTHER AND SONS

Research by:
Col. George E. Townsend (dec.) - Roy Ehrhardt

All are early 1817-1872 English style watches, and to bring the values listed below must be in mint condition and in their original cases.

---

### HAMILTON WATCH CO., LANCASTER, PA.

Research by:

Arthur Zimmerla - Walter Kroeker - Roy Ehrhardt

The identification of Hamilton watches will be more accurate and quicker by using a Hamilton serial number list available from Heart of America Press. The unmarked Grades may be impossible to identify positively without this list.

Hamilton is listed with the Highest Jewel-Highest Quality-Largest Size first, decreasing to the Lowest Jewel-Smallest Size. Hamilton did not use Model numbers so for convenience we have assigned them and used an asterisk to denote this.

Most Hamilton Grades were made over a long period of time so multiple listings will appear under each Grade to describe the different markings and/or movement finishes which have been seen. The first **bold** line(s) and, where appropriate, the first Code line of the description is common to each subsequent listing.

In sterling silver case as above; case only ...........................(EM 15002) $50-75

16S-22J-ON5A*P-A6P-"4992B" EA 315 ...... (EM 15003) $175-225
With small diameter gold-colored uncut balance with Elinvar hairspring, beating 21,600 BPH. In special thick chrome-plated base metal case marked: U.S.Navy Buships Comparing Watch-Mark 1 Mod 0-N 14085-1944-Hamilton Watch Co., Lancaster, Pa.

>> See page ??? for carrying boxes.

**NOTE**: After WW II Hamilton sold jewelers conversion kits to change the "4992B" from 24-hour to 12-hour with a subsidiary seconds bit, making them look like 992B's" except for the "4992B" marking and some extra holes in the back plate if the sweep second bridge was removed; some were not. The value of these conversions would be about the same as for a regular "992B".

16S-17J-HN2A*P-A5P-RRG"973" EA 304 * .................... (EM 15171) $60-80
16S-17J-HN2B*L-A5P-RRG"973" EA 306 (80-31) * .......... (EM 15172) $60-80

**NOTE**: Movements were finished in both regular and gold-plated trim. Early issues were not marked with the Grade number. Later, watches have gold jewel settings. None of these variations seem to affect the .......................... value, probably because most collectors are unaware of them and/or because there is no measure of their relative scarcity. *Some "973" movements have a DS-GE-AN-Dial marked Hamilton-973-5 Positions The following is a list of the known "972" additional markings.

**5 Positions** .................... (EM 15173) $75-100
**5 Positions-972** .................... (EM 15174) $75-100
**5 Positions-Double Roller-972 (2-34)** .................... (EM 15175) $75-100

### HAMPDEN WATCH CO.

Research by:
Robert "Bob" Arnold - John Miller - Roy Ehrhardt
William F. "Bill" Meggers, Jr.

Hampden watches are listed Largest Size, Highest Jewel, lowest model number first, decreasing to Smallest Size Lowest Jewel, highest model. Hampden also made the following **named grades** which are listed alphabetically under their grade name elsewhere in this book. Hampden watches are generally under-valued for their quality, due to the absence of any factory serial number-production information.

**Anchor D (in a flag)**
**Aviator**
**Beacon**

### HOWARD, E.& CO., BOSTON (1857 TO 1903)

Research by:
Howard Gunderson - Col. George E. Townsend (dec.)
Roy Ehrhardt

Howard is listed with the Largest and Oldest Model first, decreasing to the Smallest size without regard to number of jewels. Size is listed by the Howard letter and the closest numerical equivalent. Early Howard watches had adjustment symbols engraved on movements in lieu of markings. These symbols have the following meanings.

Stag = Adjusted to positions
Horse = Adjusted to heat & cold
Hound = Unadjusted

### HWCO (as a MONOGRAM)

(Hampden Watch Co.)
(Also listed under their Grade names, e.g., **D** in **Flag**, **H** in **Flag**, **SR** in **Flag**, **NR** in **Flag**, etc.)
Research by:
John Miller - Robert "Bob" Arnold - Roy Ehrhardt
William F. "Bill" Meggers, Jr.

Hampden watches are generally under-valued for their quality due to the absence of any factory serial number production list. Grades are listed in alphabetical or numerical order.

### ILLINOIS WATCH CO.18-SIZE NAMELESS NUMBERED GRADES AND UNMARKED NAMED GRADES

Research by:
William F. "Bill" Meggers, Jr.

Illinois 18-Size Nameless Numbered Grades are NOT marked with a Grade number. Therefore, in many cases it will be impossible to make a positive Grade determination without referring to the factory Serial Number-Grade Listing in Volume 2, ***AMERICAN POCKET WATCH ENCYCLOPEDIA and PRICE GUIDE***, available from Heart of America Press.

Illinois 18-Size Nameless Numbered Grades are listed Highest Jewel, Highest Quality first decreasing to Lowest Quality, Lowest Jewel. Illinois also made the following **Named Grades**, which are listed alphabetically under their grade name elsewhere in this book. **However, where named grades were produced without the name being on the movement they are listed below. For example, there are three varieties of Bunn Special that are not marked on the movement and so are listed here as well as under "Bunn Special"**

**America**
**Arlington**
**Autocrat**
**Bates**
**Bunn**
**Bunn Special**
**Columbia**
**Currier**
**Dean**
**Diurnal**
**Hoyt**
**Illini**
**Interior**
**IWCo.**
**Leland, Rose**
**Lincoln, A.**
**Mason**
**Miller**
**Sangamo**
**Sangamo Special**
**Stanley**
**Stuart**
**Stuart, Mary**
**Sunnyside**
**SWCo.**

### 24 JEWELS 18-SIZE

**Illinois Watch Co.-Springfield-24 Ruby Jewels-Adjusted Temperature, 6 Positions, Isochronism** in the form of a flag **-Double Roller** ca 1899 (unmarked "Bunn S." named grade)
18S-24RJ-ON6L-T6PI-RRG"Bunn S." 4th (bright spotted) pattern EA 457 ..........(EM 16274) $700-900

**Illinois Watch Co.-Springfield-24 Jewels-Adjusted** ca 1905-1920
18S-24RJ-ON6L-TPI-RRG"79" EA 457 ..........(EM 16275) $600-700

**NOTE**: This may be an erroneous listing. The only known example is private label-marked and may actually be a Bunn Special Grade.

**Illinois Watch Co.-Springfield, Ill.** or **Springfield-24 Jewels-Adjusted** ca 1883-1905
18S-24J-HN5L-TPI-RRG"64" EA 456 ..........(EM 16276) $400-500
18S-24J-ON6L-TPI-RRG"64" EA 457 ..........(EM 16277) $400-500

### 23 JEWELS 18-SIZE

**Illinois Watch Co.-Springfield-23 Ruby Jewels-Adjusted Temperature, 6 Positions, Isochronism-Double Roller-Jeweled Barrel-M 1906** .......... (unmarked "Bunn S." named grade)
18S-23RJ-ON6L-T6PI-RRG"Bunn S" EA 456 (Probable prototype from factory) ..........(EM 16278) $Not valued

### 21 JEWELS 18-SIZE

**Illinois Watch Co.-Springfield-21 Ruby Jewels-Adjusted to Temperature, 6 Positions, Isochronism-Double Roller** ca 1906

18S-21RJ-ON6L-T6PI-RRG"Bunn S" 4th (bright spotted) pattern EA 457 (V2 94-2) (This is an unmarked "Bunn S." named grade)..... (EM 16279) $400-450

**Illinois Watch Co.-Springfield-21 Ruby Jewels-Adjusted** ca 1901
18S-21RJ-ON6L-T6PI-RRG"Bunn S" 4th (bright spotted) pattern EA 457 (unmarked "Bunn S." named grade) ............. (EM 16280) $400-450

## ILLINOIS WATCH CO. 16-SIZE NAMELESS NUMBERED AND LETTERED GRADES

Research by:
William F. "Bill" Meggers, Jr.

16-size Illinois Models 1, 2, & 3 require a special thick old style case. Generally, Models 4 thru 15 all fit the same case, the only variation being pendant or lever set, with Models 4 & 5 requiring a unique lever location. However, some Model 10 and all Model 13 movements are 17-size.

Most Illinois 16-Size Nameless Numbered Grades are NOT marked with a Grade number. Therefore, in many cases it will be impossible to make a positive Grade determination without referring to the factory Serial Number-Grade Listing in Volume 2, ***AMERICAN POCKET WATCH ENCYCLOPEDIA and PRICE GUIDE***, available from Heart of America Press.

Illinois 16-Size Nameless Numbered Grades are listed Highest Jewel, Highest Quality first decreasing to Lowest Quality, Lowest Jewel.

### 23 JEWELS 16-SIZE

**Illinois Watch Co.-Springfield-23 Diamond Ruby & Sapphire Jewels-Adjusted Six Positions-Double Roller** ca 1914

### ILLINOIS WATCH CO. 12-SIZE NAMELESS NUMBERED GRADES

Research by:
William F. "Bill" Meggers, Jr.

Illinois 12-Size Nameless Numbered Grades are listed Highest Jewel, Highest Quality first decreasing to Lowest Quality, Lowest Jewel. Most Illinois 12-Size Nameless Numbered Grades are not marked with a Grade number. Therefore, in many cases it will be impossible to make a positive Grade determination without referring to the factory Serial Number-Grade Listing in Volume 2, ***American Pocket Watch Encyclopedia and Price Guide,*** available from Heart of America Press.

12-Size Models 1 thru 5 use the same standard size case.

See Dollar Watches

## INGERSOLL WATCH CO.

Research by:
Ralph Whitmer - Col. George E. Townsend (dec.) - Roy Ehrhardt

**Ingersoll Watch Co.—R.H. Ingersoll & Bro.—**
**Robt. H. Ingersoll & Bro.—Ingersoll Trenton**

Ingersoll claimed 12,000 watches sold per day in a 1908 advertisement. Ingersoll claimed 60,000 dealers in a 1909 advertisement.

All Ingersoll watches known to researchers are listed here but many were made and no doubt some are missing.

### NAMES USED ON INGERSOLL WATCHES

(Listed Alphabetically)

When the common or less interesting names appear on the early and more expensive movements, this increases their value to that for the same quality of movement in its case. Ingersoll names are listed alphabetically, as they appear on the dial. All cases are nickel or nickel-plated brass and all are snap back and bezel except the early backwinds, which are hinged. Most of the movements have one or more patent dates and a serial number on them. See Dollar Watches.

### INTERSTATE CHRONOMETER

(Illinois Watch Co.)

Research by:

William F. "Bill" Meggers, Jr.

***Interstate Chronometer*** was a private label sold by Sears, Roebuck & Co. from 1911 through 1915 Values include the proper dial marked ***InterState Chronometer***. An incorrect dial will reduce the value by at least one-half. All watches were originally sold cased in John C. Dueber 20-Year yellow gold-filled cases, according to the advertisement in the 1911 Sears Roebuck catalog.

**Interstate Chronometer** (various markings)

### NEW ENGLAND WATCH CO.

(See also Waterbury Watch Co.)
Research by:
Roy Ehrhardt - Col. George E. Townsend (dec.) - Dr. Warner Bundens (dec.)

New England is listed Largest Size first, decreasing to Smallest Size and alphabetical within each size. Most of the movements listed here were cased at the factory in unique, push-to-set cases. The movement must be in an original case and in mint condition before collectors will pay the value shown for the movement, and you must add the value of the case. The numbers in the "Complete Mint Watch Listings" are advertised New England stock numbers, taken from their catalogs. Unless indicated otherwise, all movements have Duplex escapement.

From 1901-1913 New England Watch Co. issued beautiful unique four-color factory catalogs and color inserts that were furnished to wholesalers and jobbers for their catalogs. If you love to collect these beautiful enamel watches a set of these pages will be helpful and enjoyable. It is very difficult to put into words a good description of these very ornate & intricate designs. The enamel and escapement are fragile and a mint one is hard to find. The Swiss also exported similar watches to this country.

### 20 SIZE

**N.E.W.Co.-Padishah-I**
20S-4J-OGIP-U-"Series I" EA 578 or 579 ..........................(EM 18490) $40-60

### NEW HAVEN CLOCK CO.

Research by: Ralph Whitmer - Col. George E. Townsend (dec.)

When the common or less interesting names appear on the early and more expensive movements, this increases their value to that for the same quality of movement in its case. All Model numbers are assigned.

## NON-MAGNETIC WATCH CO.

Research by: John Miller - Roy Ehrhardt

Non-Magnetic and Geneva N.M. Watch Co., imported a full line of Swiss watches including 6- to 18-size, time-only through the most complicated minute repeating moon phase calendar watches. We have not tried to identify or price those in this book. Some of these watches are illustrated and described (2-122).

### NON-MAGNETIC WATCH CO.-PAILLARD

(by Illinois Watch Co.)

Research by: William F."Bill" Meggers, Jr. - Roy Ehrhardt

Values include the proper Dial marked Paillard Non-Magnetic Watch Co., Chicago, U.S.A. Letters or numbers following factory Grade are Paillard's own Grade designations, as given in their advertisements. Movements with Grade letters that include an "M" should have white non-magnetic hairsprings. ca 1895-1910

### O'HARA DIAL CO.

ca 1893-1912

Research by: Danny Doloff - Roy Ehrhardt

**NOTE:** All dials are valued as being mint 18-size special emblematic glass-enameled dials. One or more hairlines reduces the value by half or more. Pictures of dials can be found in the 1979 Price Indicator, pages 13-19, available from Heart of America Press.

**Philadelphia Watch Co.-Paulus Patents-Aug. 25, Nov. 3, 1868**

Swiss–made watches. Made in 6, 16, 18 & 20-size in both gilt & nickel-finished movements, keywind & stemwind. Swiss case sizes are unique and watches have very little value except in their original case. Many came in beautiful solid gold cases. Usually fitted with high quality DS- or SS-GE-Dial, sometimes marked Philadelphia-E. Paulus EA 719 Movement only ..........(EM 19638) $50-200

In mint glass back display case, with stem, bow & crown .....(EM 19639) $100-300

Collectors prefer this watch cased in 18K engine-turned or engraved hunting case.

18-size Mint ..........(EM 19640) $800-1000

16-size Mint ..........(EM 19641) $600-800

**Philadelphia Watch, The-Exhibition Watch** (Marion) ca 1876

### ALBERT H.,and W.C. POTTER

Research By: Mike Harrold - Col. George E. Townsend (dec.)
Dr. Warner Bundens (dec.) - Roy Ehrhardt

**Potter, Albert H.-Chicago-Boston-Geneva** or **New York**

Made watches in both America and Switzerland, ranging from time-only to very complicated repeaters. (EA 725) thru (EA 733) will give you some idea of the variety found in Albert Potter watches. They also have been pictured in: (79-97), (79-82) and (80-46). It is very hard to predict in advance what one of these watches will bring in the world-wide collector watch market. A few have gone though the major auction houses in New York and London with excellent illustrations in the catalogs. Movements in time-only without a case usually sell for a minimum of 3500 dollars. An original case increases the value of these watches dramatically. Original gold-cased complete mint watches usually sell from 15,000 to 20,000 dollars for time-only.

**Potter, W.C.& Albert**

Were in business in Chicago and Geneva Switzerland and made watches as well as contracted with other companies to make Private Label watches for them. These Private Label pieces are worth far less than their own markings. Some are listed below.

**Potter, W.C.-Made Expressly For-Adjusted**
16S-18J-ONSP-A-"V&C" EA 734 (Vacheron & Constantin) .(EM 19764) $75-100

### RAIL ROAD KING

(by Illinois Watch Co.)

Research by: William F. "Bill" Meggers, Jr.

**NOTE:** Rail Road King was a Private Label of the Illinois Watch Co. and all are Railroad Grade (RRG). All watches marked Rail Road King have a special dial. The earliest dials are DS-HE-RN marked RAIL ROAD KING in block letters (V2 277-5). These were followed by DS-GE-RN dials marked *Illinois Watch Co.* in script over RAIL ROAD KING. The final variation was DS-GE-AN or RN marked Illinois Watch Co. over SPECIAL FOR RAILROAD SERVICE (V2 276-5 & 277-2). Not enough data exists to know exactly when the changes occurred. Values below assume a mint dial marked as above is affixed. (Dial only(EM 19906) $150-200)

**Rail Road King-Adjusted** ca 1894 —see dial note above

### B.W. RAYMOND

(Elgin Natl. Watch Co.)

Research by: John Miller - Albert Griner - Roy Ehrhardt

B.W. Raymond is listed Highest Jewel-Largest Size first, decreasing to Lowest Jewel-Smallest Size. All B.W. Raymond's were Railroad Grade (RRG) at the time they were made.

**WI** = Winding Indicator, or Up-Down indicator.

### 16-SIZE RAYMOND, B.W. - 23 JEWELS

**Raymond, B.W.-Elgin, Ill., U.S.A.-Adjusted 5 Positions**

## REMINGTON WATCH CO.

(by Illinois Watch Co.)

Research by: Roy Ehrhardt - William F. "Bill" Meggers, Jr.

Remington watches were made by Illinois and sold through the American Watch Club, operated by the Walker Edmund Co., Cincinnati, Ohio, with cases supplied by the Bell Watch Case Co., Mansfield, Ohio. Values include Dial: The Remington Watch Co. ca 1900-1910. The following listings are based on advertisements, very few actual watches have been reported. As advertised in the Watch Club Booklet, Remingtons also were offered in 12, 6 & 0-size but with no mention as to Grades, and researchers have not seen any examples.

**Remington Watch Co.-Cincinnati, U.S.A. "Guaranteed"-21 to 15 Jewels** or unmarked-**Adjusted** or **Adjusted 5** or **Five Positions** or unmarked

## ROCKFORD WATCH CO.

Research by: Dean Olson - Roger Weiss Jr. - Roy Ehrhardt

Identifying Rockford watches will be more accurate and quicker by using a Rockford serial number list available from Heart of America Press. Without this list it will be impossible to identify the Grades accurately in most instances.

**NOTE:** Rockford is listed by jewel count, largest size first and then in ascending order of Grade number. Rockford Watch Co. also made named grades **Iroquois Pocahontas Winnebago Winona** which are listed alphabetically under their grade name elsewhere in this book.

---

**Rockford-17 Jewels-Adjusted**
16S-17J-HT1L-A-RRG"103-X" EA 760 .......... (EM 20514) $100-150

### SANTA FE ROUTE

(by Waltham Watch Co.)

Research by: William F. "Bill" Meggers, Jr.

The Model 1892 Santa Fe Route watches were sold by H. S. Montgomery, Santa Fe Railway Co. General Watch and Clock Inspector, to railroad employees as the Railway Company's Standard Watch between about 1896 and 1910. We do not know for whom the Model 1883 movements were made but it probably was Montgomery. Two variations of the "Bar of Soap" herald (logo) have been seen on the Model 1883 watches; one has rounded corners, the other has square corners. A variety of dials have been seen on Santa Fe Route watches. Add the appropriate value shown below to include one of the following:

---

Model 1883:
DS-GE-AN-Dial: Santa Fe Route herald, Waltham in an arc over seconds sink.......................................................... (EM 21087) $300-400
DS-GE-AN-Dial: Santa Fe Route herald, Waltham in a straight line below...................................................................... (EM 21088) $300-400
DS-GE-Bold Rail Road Style Dial: Santa Fe Route herald, Waltham (V1-84) ................................................................... (EM 21089) $300-400
Model 1892:
DS-GE-AN-Dial: WALTHAM..................................... (EM 21090) $25-35
SS or DS-GE Montgomery AN-Dial: Santa Fe Railway System Standard Dial, Waltham (77-94) ............................................ (EM 21091) $300-400
DS-GE Montgomery AN-Dial: Montgomery's Safety Numerical Dial, Waltham ................................................................ (EM 21092) $300-400
**Santa Fe Route** in frosted herald (logo)-**17 Jewels-Adjusted**

18S-17J-HN83L-A-RRG"Crescent St." EA 26A (78-105) (EM 21093) $450-600
18S-17J-ON83P-A-RRG"Crescent St." EA 27 (V1-84) (EM 21094) $450-600
**Santa Fe Route** in frosted herald (logo)-**21 Jewels-Adjusted**
Dial: see above (Waltham)
18S-21J-HN92L-A-RRG"Crescent St." gold-plated barrel bridge EA 28 two seen .................................................. (EM 21095) $1000-1200
18S-21J-ON92L-A-RRG"Crescent St." EA 27 (V1-86) (EM 21096) $600-800

### SANTA FE SPECIAL

(by Illinois Watch Co.)

Research by: William F. "Bill" Meggers, Jr.

**NOTE**: Unlike Santa Fe Route watches, no connection has been found between the Santa Fe Railway Co. and the Santa Fe Watch Co. However, the watch company often implied such in its ads (77-92). Values below include a dial marked Santa Fe Special-Illinois (V2 279-5 & 8). All Santa Fe Special watches, as originally sold, were cased in Santa Fe Watch Co.-marked cases (77-92) with many different style backs. Some Santa Fe Specials were Railroad Grade (RRG) and some railroads, notably the Union Pacific, accepted all 16-size Santa Fe Specials in Time Service until the early 1940's. Which is rather interesting when one considers that the Santa Fe Railway was a rival line.

### SEARS, R. W.

(by Elgin Natl. Watch Co.)

Research by: William F. "Bill" Meggers, Jr.

The earliest known watches marked with Sears' name were made by Elgin

**Sears, The R.W.-Elgin Natl. Watch Co.**
SS-HE-RN-Dial: The R.W. Sears or R.W. Sears ca 1886
18S-15J-HG2L-U-"82" EA 206 ................................ (EM 21216) $400-600

### SEARS WATCH CO., THE R.W.

(by Illinois Watch Co.)

Research by: William F. "Bill" Meggers, Jr.

See NAWCC Bulletin Vol. 32, Oct. 1990 for history of this important company. All The R.W. Sears Watch Co. watches seen have an unmarked SS or SSIC-HE-RN-Dial (V2 281-5) and most were cased originally in Dueber Watch Case Co. 20-Year YGF cases (V2 281-9). Some of these cases are marked just "R.W. SEARS" inside the back. The seven known Sears "Names" are listed in alphabetical order, followed by a nameless 6-size movement.

**Defiance-The R.W. Sears Watch Co.-Chicago, Ill.** ca 1887

Photographs of this jewelry store indicate it was lavishly decorated & offered the finest goods available in the world. A good many Private Label watches (mostly Swiss) have been seen but no attempt has been made in this book to list or value them. We hope to record them and list some of them in a future ............................. edition. More research is needed; show us your watch.

### STANDARD WATCH CO.-PITTSBURGH, PA.

Research by: William F. "Bill" Meggers, Jr. - Roy Ehrhardt

Standard Watch Co.-Pittsburg, Pa. ca 1883-1889 sold private label watches mostly made by Illinois; all or some of these same Grade names also were made by Lancaster W. Co., Hampden W. Co., Swiss and possibly Elgin Nat'l. W. Co. Standard Watch Co. watches are very scarce. The following listings are all by Illinois, primarily from advertising cuts (78-55) and are listed in alphabetical order by Grade.

**NOTE**: This movement has no serial number on any of the plates and the only number extant is 50001 on the hour wheel. If that is the original hour wheel then the movement is the first watch in the first listed run of Model 2 Bunns and might be a factory model. However, this movement has the later female winding pinion and lever design which suggests that it was not the first but the second stem winding design so for now it remains an enigma.

### J.P. STEVENS & CO.-ATLANTA, GA.

Research by: Roy Ehrhardt - Col. George E. Townsend (dec.)

Like Ball, J. P. Stevens had watches made for him by many American companies. Most have his distinctive patent regulator and most also have distinctive plate shapes. Model numbers are those appropriate to the manufacturer.

---

#### AMERICAN - J.P. STEVENS

**Stevens, J.P.& Co.-Atlanta, Ga.**
18S-11J-HG77L-U-"WE" EA 24 (Waltham) ...........(EM 21873) $250-300

**Stewart** 6S-17J-ON3P-U-"130" EA 874 (Trenton) .............. (EM 21894) $5-10

### STEWART SPECIAL

(by Illinois Watch Co.)

Research by: William F. "Bill" Meggers, Jr.

"Stewart" was a Private Label of Sproehnle & ., Chicago, ca 1897 to 923. Although some of the 16- and 12-size movements have unusual bridge shapes, values seem to be essentially the same as for equivalent factory Grades. The 18-size adjusted Grades are Railroad Grade if finished before 1920. Dial marked Stewart.

## UNITED STATES WATCH CO., MARION, N.J.
## MARION WATCH CO., MARION, N.J.

Research by: Maylene Rabeneck - Roy Ehrhardt - Jon Hanson
Col. George E. Townsend (dec.) - Larry Ehrhart - Charles Wallace
Dr. Ronald Scott - Bill Guido - Dick Hoban - Eugene Fuller - John Fosette
William F. "Bill" Meggers, Jr. - Dr. Warner Bundens (dec.)
Adin E. Mathews (dec) - Jim Eldridge - John Wilson
William Muir's & Bernard Kraus' book and their researchers

Identifying rare United States/Marion watches will be more accurate and quicker by using the reconstructed serial number list in ***Volume 3 American Pocket Watch Encyclopedia And Price Guide - United States Watch Co., Marion*** —Heart of America Press, a 141-page book that lists among other things the serial number & description of all Marion-made watches known to researchers as of February,1993

United States Watch Co. & Marion Grades are listed alphabetically by Grade name and by size within each Grade, with all catalog numbers not seen listed last. All Model numbers are assigned by researchers and are followed by an asterisk (*). Model 1* movements with the butterfly cutout are marked "Giles Patent Mch. 13th 1866". All United States Watch Co. Models 2*, 3*, 4*, and 5*, except for Grade or catalog Nos. "45 ¼", "45 ½", and "45 ¾", were advertised as fitted with Elson's Patent Double Index Regulator, and the balance cock is usually marked "Pat. Mch. 8th 70" with "Patent Dec. 30, 73" or "Patent Applied For" on the barrel. The Elson regulator is complicated and fragile and is missing on many watches found today which reduces their value. Elson's Regulator also is found on high serial number 18-size EA 894A movements without the butterfly cutout.

Some of the descriptions for lever or button set are shown as lever set because of inconsistent reporting of Serial Numbers. At this time, button set are more desirable to collectors and therefore have a higher value. We are using "button set" to separate it from the Swiss style pin set because it is different in many ways. Button setting is indicative of an earlier piece; therefore, higher quality and greater value.

**QUALITY RANKING:** No original factory information is known that directly addresses differences in quality between Grades. Therefore, we have arbitrarily equated quality to original price. Thus, the Quality Number (Q1 through Q19, 1 being highest) following each of the listings is based solely on the original price the movements sold for, as found in the known factory price lists of movements (1870-1876), which are illustrated in (77-52) and Muir-Kraus (134-136, 163-164, 178). At the time they were made, all of the 18-size & 16- size 15 (or more) jewel movements would have been accepted for railroad service on those railroads that had inspection standards, and are marked RRG in their Code line.

**QUALITY REDUCTION:** Time-related reduction in quality within a Grade is unique to the Marion watches. As the company found itself in inceasingly difficult financial straits it was forced to reduce the amount of labor that went into producing each movement. The Model 1* full-plate butterfly cut-out movements in the higher quality Grades show this reduction rather abruptly after a certain time in the life of the company. It is almost predictable that, after a certain serial number, the later movements do not have the beauty or finish of those that preceded them. For example, Grade A.H. Wallis movements with serial numbers between 19,001 & 19,400 begin to show a variety of reductions in jewel count and finish that never are reversed. Some Wallis key-wind movements exhibit partially done machining for the stem-wind that never was completed. Thus, movement No. 19,898 is 15J with brass settings, key-wind (stem wind machining incomplete), poor plate finish, etc. As a result, only the early Marion products show any consistency in terms of quality. These are the most important and easiest to value. All reduced quality versions must be considered on an individual basis, but each aspect of quality reduction can be considered and valued. (From original observations by John Wilson.)

First run (S/N 2000-3000) add 150-200 dollars.
With 1865 stemwind patent mechanism add 150-200 dollars.

**United States Watch Co.-Marion, N.J.** (Q1)
Description: 19 jewels–Breguet hairspring–raised or flush gold jewel settings, including gold setting under the Dial, held with screws–most have gold-plated steel work–gold index–double-sunk Dial–nickel or gilt movement plates. Only one pure key-wind is known. These movements are all unique with no two exactly alike. Values shown have little meaning because there are so few known (26 as of January 1993).
18S-19J-HN1*B-TPI-RRG"22" EA 894 (MK-145)
Frosted ..........................................................................(EM 23533) $4000-4500

18S-19J-HN1*K-TPI-RRG"21" EA 894 (MK-143) .....(EM 23535) $4000-4500
18S-19J-HN1*K-TPI-RRG"19" EA 894
Frosted (79-77) ..............................................................(EM 23536) $4000-4500
18S-19J-HN1*B-TPI-RRG"22" EA 894 .......................(EM 23537) $4000-4500
18S-19J-HG1*K-TPI-RRG"23" EA 894 .......................(EM 23538) $4000-4500
18S-19J-HG1*B-TPI-RRG"24" EA 894 (V3-55)(V3-29) (EM 23539) $4500-5000
Change the above Model 1* values for the following:
**U.S.W.Co.** monogram substitution for **United States Watch Co.** spelled out add 200-300 dollars.
U.S.W.Co. monogram on double-sunk Dial add 400-750 dollars.
Fancy colored enamel, different colored lettering "Giles Wales & Co.", etc. add 300-800 dollars.
Sunk-seconds Dial deduct 200-300 dollars.
Mint original 18K Button-set hunting case with *USWCo.* monogram (V3-29) add 2500-3000 dollars.

**United States Watch Co.-Marion N.J.** (Q1)
Description before quality reductions: 15 jewels–flat hairspring–brass jewel
settings–most likely stem wind, lever set–silver index. These movements seem
to vary in quality quite a bit; all seem to have sunk-seconds Dials and are average
to below average quality, compared to their 19-Jewel counterparts.

14-size mint double-sunk with monogram ........................ (EM 23633) $125-175
10-size Dials...................................................................... same value as 14-size.

### 18-SIZE MARION-MADE WATCH CASE VALUES

Original factory-marked cases are very desirable. (MK-132) which shows the USWCo. monogram is also shown on (V3-17) ***American Pocket Watches Encyclopedia and Price Guide, Marion Watches-United States Watch Co.*** (see below) Values are for mint cases.

18K hunting engine-turned keywind ........................... (EM 23634) $1500-2000
18K hunting engine-turned button .............................. (EM 23635) $1500-2000
18K open-face engine-turned keywind ........................ (EM 23636) $1250-1500
18K open-face engine-turned button ........................... (EM 23637) $1250-1500
Silver hunting engine-turned keywind .............................. (EM 23638) $350-500
Silver hunting engine-turned button ................................. (EM 23639) $400-600
Silver open-face engine-turned keywind .......................... (EM 23640) $300-450
Silver open-face engine-turned button ............................. (EM 23641) $350-500

### ORIGINAL CASES

Not all original cases were USWCo. monogramed; many watches were sold by the factory as movements and were cased by the retailer in cases manufactured by other makers of the time. Today when an uncased movement is found it is cased in the best proper case the owner can find. Thus, the values shown assume that the movement is in an original case but the value of the case must be added to the movement value to obtain the total value. Similarly, you must deduct some for a non-original or improper case. Three of the Models are hard to find original cases for:

18-size Model 2* (key wind & set from back)
16-size Model 3* (actually measures 17-size)
14-size Model 4* (actually measures 12-½ size)

18-size Model 1* & 10-size Model 5* & 6* fit standard size early cases of the 1870 to 1885 period. Some later cases especially stem-wind are about 1/8 to 1/10 of an inch smaller. All of the key-wind Models except 1* are key-wind and set from the back with 2 holes in the dust cover.

## MARION WATCH Co.

ca 1874-1876

Same Grades as USWCo., but with MARION WATCH Co. Dials, poorer quality finish and lower jewel count. We have tried to account for this in the values shown in the previous listings.

## EMPIRE CITY WATCH Co.

ca 1876-1877

Empire City Watch Co. was the successor to United States Watch Co. For convenience all Grades are listed here in order of decreasing quality (Q). Also listed elsewhere under the various Grade names. (MK-178)

**Empire City Watch Co.-New York** (Q1) ca 1876 Dial: Empire City Watch Co.

## WASHINGTON WATCH CO.

(by Illinois Watch Co.)

Research by: William F. "Bill" Meggers, Jr. - Roy Ehrhardt

---

Washington Watch Co. was a private label of Montgomery Ward & Company between 1902 and 1919. Values include the proper Dial: Washington Watch Co.. At least by 1909 some were sold in cases marked *MW & Co.* inside the back. Washington Watch Co. is listed by Grade name in alphabetical order. Movements bear the customary jewel and adjustment markings in addition to the private label Grade name. Lowest known Illinois-made Washington Watch Co. serial number: 1,411,901

16S-23DRSJ-ON10L-A6P-RRG"710" EA 473A ........(EM 24100) $3500-4000

Greenwich was one of the highest quality watches made by Illinois Watch Co. and was sold by Montgomery Ward in a mahogany box with a rating certificate, ca 1914-19. The Grade "710" was the only Grade, other than the Sangamo Special, to be made in Model 10. See also factory Grades "710" and "770". (RRG if before 1906)

### WATERBURY WATCH CO.

(See also New England Watch Co. and Benedict & Burnham Mfg. Co.)

Research by: Col. George E. Townsend (dec.) - Roy Ehrhardt
Dr. Warner Bundens (dec.) - Ralph Whitmer

---

Many of the movements in the following list were cased at the factory in unique, push-to-set cases. The movement must be in its original case and in mint condition before collectors will pay the values shown for the movement and you must add the value of the case. There is some duplication in this book between Waterbury and New England because We don't know where one ends and the other begins. "The only genuine American invention in the way of a watch--all others made in this country being modeled after foreign calculations." (Taken from a Waterbury advertisement of August, 1886.)

Waterbury is listed by series letter, "Series A" first through "Series N", without regard to size, quality, or number of jewels.

### NAMES ON WESTCLOX POCKET WATCHES

(Listed alphabetically throughout this book)
(See Dollar Watches)

When the common or less interesting names appear on the early and more expensive movements, this increases their value to that for the same quality of movement in its case. Westclox are hard to value because some of the names appear on modern watches. Use the value of the movements and consider the age as well as the name on the dial. Westclox does not seem to be as popular with collectors as some of the other older companies. All cases are nickel or nickel-plated brass and are all snap back and bezel except the early back-sets which are hinged. Most of the movements have one or more patent dates.

# MEMORIAL TO ROY EHRHARDT

Roy was a friend of mine, but he was difficult at times as all great men. He once told me he owed me a lot for my help with the books and things and he offered me a free ad in all his publications. I told him I would design a tract about Jesus Christ and the End Time Message He sent through William Branham. Roy did not think that would be appropriate. Now Roy would be standing on the clouds of glory shouting for all he and I have for friends who are almost all associated with this timepiece collecting.

-William Selover, Publisher

# READ THIS FOR YOUR SOUL'S SAKE

In June of 1933, before about four thousand awe struck witnesses as William Branham was baptizing people in the Ohio River, a strange light like a star suddenly came whirling down and hung over his head and a voice spoke to him and said, "As John the Baptist was sent to forerun the first coming of Christ, you are sent with a Message to forerun His Second Coming."

According to Amos 3:7, God has revealed the secrets of His Coming to His own vindicated prophet. Captured on cassette tapes are hundreds of miracles, discerning of the heart and healing as William Branham ministered to God's people of our day. But throughout all the tapes is a Message of vital importance to those yearning for the Coming of the Lord Jesus Christ.

Each one of us came from eternity for this short time of testing. Many are disobedient unto death; few accept and serve Jesus Christ, their Creator. This man was raised up as John the Baptist was to correct the church and prepare a people to meet the Lord. Jesus is not coming, He is here. The rapture is not a coming future tense. It is here, present tense and the secret catching away of the Elect Lady, the Bride of Jesus Christ, is all that is left once the predestinated soul is born-again.

## A GOD-ORDAINED PROPHET

Hear the Word of the Lord, "... *Before I formed thee in the belly, I knew thee: And before thou camest forth out of the womb, I sanctified thee, And I ordained thee a Prophet unto the nations.*" Jeremiah 1:5

## IS IT LATER THAN YOU THINK?

"O ye hypocrites," cried Jesus, "ye can discern the face of the sky, but can ye not discern the signs of the times?" (Matt. 16:3b) Can you?

From all over the world, the Jews are returning to their homeland. Israel became an independent nation in 1948 after centuries of being scattered and persecuted by the Gentiles. Nearly 2,000 years ago Jesus prophesied all this would take place (Luke 21:24). Jesus then said, "When ye see these things come to pass, know ye that the kingdom of God is nigh at hand. Verily I say unto you, this generation shall not pass away, 'till all be fulfilled." (Luke 21:31-32)

So we know the hour is late. Yet before Jesus Christ can come again, there must be a restoration within His Church (Acts 3:19-21), which is to be accomplished by means of a prophet – one man, having the spirit of Elijah, (Mal. 4:5; Mark 9:12), sent to the last generation to correct all those things that have gone off into error, thus preparing a people to be the Bride of Jesus Christ.

That prophet has come and gone. All the scriptures concerning him have been fulfilled. Christ's Bride will soon be caught away to the MARRIAGE SUPPER OF THE LAMB (Rev 19:6-9) – and for those left on this earth, the great tribulation, (Matt. 24:21; Rev. 6:12-17).

Who is this man of whom I speak? And what makes me believe him to be that end-time prophet promised to the Gentiles?

## THE LIFESTORY OF WILLIAM BRANHAM

The world knew him as **Reverend William Marrion Branham**. Those who loved him call him "Brother Branham". **As far as being a prophet - judge for yourself.** God didn't vindicate His servant in a closet, or some "secret chamber", but the world saw the proof, yet perceived it not. Newspapers and magazines around the world had proclaimed it, but not with understanding. Hundreds of thousands of eyewitnesses around the world bear record of who he was, though few realized the meaning of the evidence before their eyes.

## CHILDHOOD DAYS

**William Branham was born in the hills of Kentucky in a crude log cabin, April 6, 1906.** Those present witnessed a strange hazy light hovering over him, although it was before daylight.

When he was 3 years old, he told his mother he heard a voice speak to him out of the woods, saying, "You will live near a town called New Albany." His mother laughed. But amazingly, over a year later, his family moved to Jeffersonville, Indiana, a town that's a few miles away from New Albany.

His **first vision** occured when he was seven. While playing on the banks of the Ohio River, he suddenly beheld a bridge rise up and form across the water, as if under construction. As he watched, 16 men fell from that bridge and died in the river. Twenty-two years later, a bridge was built in that exact spot and 16 men fell from it, losing their lives during the construction.

There was no form of religion at all in the Branham family. William's early life was filled with much hardship and poverty because his father drank heavily. His father also bootlegged whiskey during the Prohibition. One time, he made his son carry water to his still. As William was passing under a poplar tree, he heard the sound of a wind. It puzzled him for the day was calm. Looking up, he saw a strange whirlwind in the branches and a voice spoke out of the whilwind and said, "Don't ever drink, smoke or defile your boay in any way, for when you get older there's work for you to do." It terrified him, and he never forgot that incident.

Several years later, his father called him sissy because he wouldn't take a drink. Determined to prove himself a "man", he raised the bottle of whiskey to his lips, but he heard that whirlwind again. Fear gripped him. He dropped the bottle and ran. In like manner, several years later, his friends called him a "sissy" because he wouldn't smoke. Angered, he grabbed the cigarette, but again that whirlwind stopped him short.

Yet, despite these and many more similar experiences, he has not yet known God intimately. While working for the gas company at the age of twenty, he was overcome with gas, became very ill, and had to have an operation. As he lay in the hopital, near death, he had a vision. He saw himself in the vision standing in a forest, and far away he heard the sound of wind rustling leaves - coming closer, and closer. He thought it was death. Then that voice said again, "*Never drink, smoke or defile your body in any way. I called you and you wouldn't go*" (as in Jonah 1:1-3). "Lord," cried William, "if that is You, let me go back to earth again and I'll preach your Gospel from the house tops and street corners." The vision then faded. Miraculously, William recovered.

He made a promise and he set out to keep it. Yet he knew nothing about finding God. Realizing that God dwelt in nature, he wrote a note and tacked it to a tree so God would read it. When that didn't work, he entered a woodshed and, weeping for his sins, he prayed desperately, "God, I'm no good! Help me!" A cross of light appeared before him then. As he realized that his forgiveness lay in the Blood of Jesus Christ shed upon the cross, the joy of salvation flooded his soul.

## THE COMMISSION FROM GOD

Because he was aware of a strange call on his life, he went into the ministry by preaching the Gospel. It was a hot day, **June 11, 1933**. He had just held his first revival and was down in **Ohio River** baptizing some 130 people in the Name of the Lord Jesus Christ. As he came to the 17th person, a blazing light appeared in the sky above him and a voice spoke to him from heaven saying, "***As John the Baptist was sent to forerun the first coming of Jesus Christ, so are you sent to forerun His Second Coming***." There were 4,000 amazed, frightened witnesses to bear record of this.

Not even Brother Branham understood then what it meant. Nor could he yet understand his peculiar life. All the ministers he knew told him the visions he so frequently saw were of the devil. However, when they were of a future event, the visions never failed to be fulfilled exactly the way he saw them and they always glorified God by helping God's children. To make things more confusing, every time William Branham came in contact with a devil-possessed person, such as astrologers or fortune tellers, they would tell him that they see a light following him, that he was born under a sign, and that there was a divine gift in his possession. These incidents troubled him greatly.

On May 7, 1946, as he was coming home from work, a mighty wind started in the top of a maple tree and came rushing down, nearly knocking Brother Branham over. Desperation struck him and he said to his wife, "For over 20 years, I've not been able to understand this ministry or myself. I can't go on like this. Is this of God? Honey, I'm going to go into the woods and seek God with my Bible and prayer and find out, or never come back!"

## VISITATION OF AN ANGEL

In a cave in the woods, he cast himself down and cried all his heart out to God. At about 11 o'clock that night, a star of Light filled the cave. Fear gripped William's heart. He heard footsteps. A man, clothed in white, walked out of the Light and said, "***Fear not, I am sent from the presence of the Almighty God to tell you that your strange life and misunderstood ways have been to indicate that God has sent you take a gift of Divine Healing to the people of the world. If you will be sincere and can get the people to believe you, nothing shall stand before your prayer, not even cancer***."

For half an hour, this angel explained to Brother Branham about the past and told him of his future (As in Gen. 16:7-12; Exo. 3:2-14; Judges 6:11-23; Zech. 4:5-6; Matt. 16: 2-7; Luke 1:11-38; Acts 5:19-20). He explained why the ministers couldn't recognize a gift of God in William's life, yet the devil could. It was the same in Jesus' day: the religious leaders said Jesus had a devil, yet the devils at Gadara recognized Him (Mark 3:22; John 7:20; 8:48-52; 10:20). He explained why the ministers couldn't recognize a gift of God in William's life, yet the devil could. It was the same in Jesus' day,: the religious leaders said Jesus had a devil (Mark 3:22; John 7:20; 8:48-52; 10:20), while demons recognized Him as the Holy One of God (Luke 4:33-35; 40-41; 8:27-28; Mark 1:23-24; 3:11). The angel also told Brother Branham that, even as Moses was given **two signs** to prove he was sent from God (Exodus 4:1-8), so he would be given two signs also. First, he would be able to diagnose diseases by their vibrations, which would cause his hand to swell. If the swelling went down after he prayed upon the person, he could say, "Thus saith the Lord, you are healed." The angel said that time would come when Brother Branham would be able to discern the very secrets of men's hearts (Heb 4:12; John 2:24-25).

Millions of people bear record that the words of the angel were fulfilled exactly (as in Acts 27:21-25). As the sign in his hand was manifested, which when seen would raise the people's faith to be healed, his ministry grew nationwide, then worldwide. Then it came to where the Spirit of Christ would reveal to him the very thoughts of men's hearts, reveal their needs; reveal unconfessed sins that were not cleansed by the Blood of Jesus Christ; reveal things about their lives that Brother Branham himself couldn't possibly know. Not mindreading or psychology, but rather he would see a vision of it - the things actually enacted before his open eyes (Joel 2:28). And when he spoke under the anointing, out of hundreds of thousands of times all over the world, the words spoken to total strangers never failed to be exactly the truth. And the prophesies — of healing, of future events, small to great, thousands and thousands and thousands of times - not once was one even partly wrong! It was a literal, "THUS SAITH THE LORD!"

Over the next ten years Brother Branham circled the globe seven times, holding some of the largest meetings in history. Some 100,000 people heard him in Durban, South Africa. Seven truckloads of crutches, wheelchairs, canes, etc., were hauled away after the healing services. Many individuals of public influence, including Congressman Upshaw of the U.S.A. and King George VI of England, were healed as a result of his prayers.

## WORLDWIDE MINISTRY

Over the next ten years Brother Branham circled the globe seven times, holding some of the largest meetings in history. Some 100,000 people heard him in **Durban, South Africa.** Seven truckloads of crutches, wheelchairs, canes, etc., were hauled away after the healing services. One healed was a poor deformed beggar, who had never in his life been able to walk erect, but walk all bent over on both hands and feet. This beggar was widely known, because those who cared for him exhibited him as a curiosity, putting a collar and chain on him and having him dance like an animal in the streets. Brother Branham saw a vision of this man standing upright, so he challenged the people and they agreed that if this man was healed in Jesus' Name, Jesus was indeed God. As soon as Brother Branham prayed, the man stood erect, (as in Luke 13:11-13). Is it any wonder that 30,000 people surrendered their lives to the Lord Jesus Christ that night?

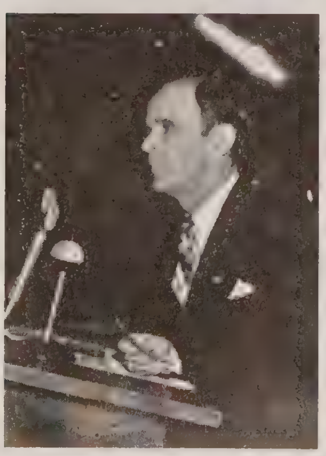
Once, God showed Brother Branham a vision of a little boy being raised from the dead. Brother Branham told the vision to 2,000 of people, describing the scenes, and telling them to write it down for it was "Thus saith the LORD!" Two years later, while they were on a campaign in **Finland,** they came a across a car accident in the mountains. And a little boy lay on the road, crushed, bloody, having been dead for half an hour. It was the boy of the vision. Brother Branham faced the crowd standing around and said, " If that little boy isn't on his feet in five minutes, you can run me out of Finland as a false prophet. But if he is, you owe me your lives to the Lord Jesus Christ!" As he prayed, life came back into that dead boy (as in Luke 7:11-16).

While preaching the Gospel of Jesus Christ in **Portland, Oregon,** a huge, demon-possessed man strode to the platform, calling Brother Branham a fake, an imposter, a deceiver, threatening to break every bone in his body. As the man drew near to execute his threats, Brother Branham said softly, "Satan, because you have challenged the servant of God - in the Name of Jesus Christ, you shall fall at my feet." The powerful man struggled to come nearer, but couldn't. He sank to the floor and had to be carried out by ushers because he fell on his face in front of God's vindicated servant.

In **Bombay, India,** where some 400,000 came to hear the Gospel, there was a blind beggar brought before Brother Branham for prayer. In a vision, Brother Branham saw who this beggar was, where he lived, and that he had become blind by staring at the sun, which he worshipped as God. Then Brother Branham challenged the various heathen Indian priests in turn saying, "If your god be God, then come up here at the platform and have him open this man's eyes and we'll fall down and worship your god." None moved. "But if my God, the Lord Jesus Christ, be God and opens this man's eyes, will you forsake your powerless gods and accept Jesus as your Saviour?" To this they agreed. The reason for this prophet's fearless confidence was because he had already seen the man healed in a vision, and the these visions never failed him. When the beggar's eyes came open that he could already see all the people in that meeting, pandemonium broke loose as those poor people strove just to touch Brother Branham to be healed.

It was in **Mexico** that the simple faith of a woman caused God to work a mighty miracle. The doctor wrote out a sworn statement that her baby had died at 9:00 in the morning of pneumonia, but because she had seen God give a blind man back his sight in Brother Branham's meetings the night before, she carried her dead baby around all day, believing that if she could just get it to Brother Branham, God would raise it up. That night, where Brother Branham was having a meeting, he saw a vision of a Mexican baby being cuddled by her mother, alive. There he prayed in Jesus' Name and laid hands on the baby. Immediately the infant began to cry and was restored back to life. The news packed the article and the doctor who issued the death certificate could not believe what had transpired.

There was a time when Brother Branham stopped his sermon, looked at a man in a wheelchair and said, "Sir, I perceive you have faith to be healed. Rise up and walk." (as in Acts 3:2-10). And **Congressman Upshaw** who had been confined to a wheelchair for over 60 years, rose up and walked down the aisle praising Jesus Christ. Returning to Washington, D.C., Congressman Upshaw was not ashamed to declare William Branham to be a prophet of God to the 20th century.



## THE PILLAR OF FIRE

**The photograph at the left with the PILLAR OF FIRE above Brother Branham's head was photographed at Houston, Texas, in January of 1950.** This Light had accompanied Brother Branham since his birth in 1909. And during a 1933 baptismal service at the Ohio River at Jeffersonville, Indiana, this SUPERNATURAL BEING appeared before hundreds of people saying to him, "As John the Baptist foreran the first coming of Christ, you will forerun His second Coming." This picture is displayed today at the Library of Congress in Washington, D.C. and was examined and certified as genuine by **Mr. George Lacy,** a federal examiner of Questioned Documents in the U.S., to be the only authentic documetation of the supernatural in this generation.

## TWO VINDICATED SIGNS

The angel also told Brother Branham that, even as Moses was given two signs to prove he was sent from God (Exodus 4:1-8), so he would be given two signs also. First, he would be able to diagnose diseases by their vibrations, which would cause his hand to swell. If the swelling went down after he prayed upon the person, he could say, "Thus saith the Lord, you are healed." The angel said that time would come when Brother Branham would be able to discern the very secrets of men's hearts (Heb 4:12; John 2:24-25).

Millions of people bear record that the words of the angel were fulfilled exactly (as in Acts 27:21-25). As the sign in his hand was manifested, which when seen would raise the people's faith to be healed, his ministry grew nationwide, then worldwide. Then it came to where the Spirit of Christ would reveal to him the very thoughts of men's hearts, reveal their needs; reveal unconfessed sins that were not cleansed by the Blood of Jesus Christ; reveal things about their lives that Brother Branham himself couldn't possibly know. Not mindreading or psychology, but rather he would see a vision of it - the things actually enacted before his open eyes (Joel 2:28). And when he spoke under the anointing, out of hundreds of thousands of times all over the world, the words spoken to total strangers never failed to be exactly the truth. And the prophesies — of healing, of future events, small to great, thousands and thousands and thousands of times - not once was one even partly wrong! It was a literal, "THUS SAITH THE LORD!"

## PROPHETIC MINISTRY

These are but a few (and by no means the most outstanding) of the miracles God used to vindicate His servant. Space fails us to record the hundreds of thousands of times that "THUS SAITH THE LORD" has been manifested in our generation without one flaw! Did not Jesus say that, "*if you can't believe Me simply because the Words I speak are the truth, then believe Me for the very works' sake, because they testify of who I am.*" (John 10:37-38). The same is true of every prophet of God. Is not the same true of William Branham? He had to be sent of God, "for no man can do these miracles except God be with him" (John 3:2).

Why then is not William Branham widely acclaimed today? No true prophet was ever accepted by the majority of people in their day. Yet a true prophet strikes against the corruption of their day, and people don't like to change from their carnal ways. Only a few will know and believe, just as it was in the days of John the Baptist.

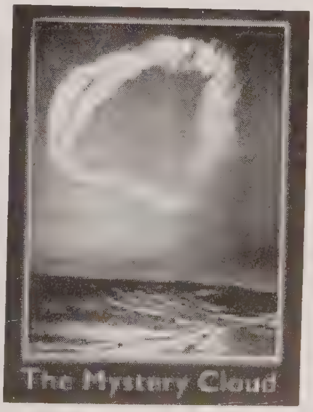
Notice this: as long as Jesus Christ (who was the God-Prophet) was healing the sick, multitudes swarmed to Him. But when he began to bring forth strong doctrine, rebuking the Saducees and Pharisees, the Bible records: "*From that time many of His disciples went back and walked no more with Him,*" (**John 6:48-68**). Likewise, as long as God used Brother Branham to heal the sick and afflicted, millions followed his ministry. But when God through His prophet began to restore the WORD, most people loved the miracles but hated the Word. Howbeit, that the Word had to be restored before Jesus Christ could take His Bride, for she must be a pure Word Bride, and the true meaning of the Word of God has been so distorted down through the centuries until today; as Jesus said, "*In vain do they worship Me, teaching for doctrines the commandments of men ... making the Word of God of none effect through your traditions*" (**Mark 7:6,7,13**).

## SEVEN-SEALED BOOK REVEALED

**On December 22, 1962, Brother Branham had a vision where he was standing near Tucson, Arizona**, picking a sand burr out of his pants leg, when a tremendous explosion occured. He told this vision to his congregation in Jeffersonville, Indiana on the 31st of December (the sermon was tape recorded).

Then he moved to Tucson, Arizona. Over a month later, on **February 28, 1963,** while out hunting, he noticed a sand burr in his trouser. As he reached to pull it off, a tremendous blast rocked the mountainside. Looking up, he saw **seven angels in the form of a pyramid** sweeping towards him, and for a time he seemed to be caught up in their midst. These seven angels represents the Seven Messengers to the Seven Church Ages as written in Revelations Chapter 2 and 3. Then a voice cried out, "Go back east," and Brother Branham knew it was time for the opening of the mysteries of the **Seven Seals** in the Book of Revelation (Daniel 12:4,8-9; Rev. 5,6 & 8).

The angels returned into the sky and formed a **cloud** some **50 miles long and 30 miles wide**, which was visible for hundreds of miles around. Many pictures were taken of this peculiar Cloud, some appearing in **Life Magazine (May 17, 1963 issue)**; some in **Science Magazine (April 19,1963 issue)**, along with a scientific report of how it was scientifically impossible for such a cloud to exist. The highest clouds form at about 10 miles, but this phenomenal cloud was 26 miles up, at which altitude water vapor does not exist.



## THE MYSTERIOUS CLOUD

The original glossy prints of the Cloud reveal the full face of the Lord Jesus Christ as the picture is viewed from the right side angle "*like unto the Son of Man. His head and His hairs were white like wool, as white as snow*" (Rev.1:13).

Brother Branham returned to Jeffersonville, Indiana wherein for seven days, as he waited on God, the voice of God spoke out the Pillar of Fire, revealing the exact Truth of the Mysteries sealed up in Revelations 5 through 8; which revelation was contrary to what everyone (including Brother Branham) had previously supposed, yet was perfectly in line with the rest of God's Word.

As Brother Branham preached seven consecutive nights on these Seals (March 17-24, 1963) his sermons were tape-recorded: Thus the Scripture is fulfilled in our day saying, "*But in the days of the voice of the seventh angel, when he shall begin to sound, the mystery of God should be finished, as he hath declared to His servants the prophets*" (Revelation 10:7).

William Branham died in December of 1965 when his car was hit by a drunken driver. It was a death which he had already anticipated by a vision. But the MESSAGE God used him to bring lives on and cannot die. There are over 1,100 different tape-recorded sermons of Brother Branham today and most of these have been printed out in book form circulating around the globe today, crying out against perversion, warning souls that Jesus Christ is coming very soon, mapping out the truth through God's Word, and preparing a Bride for the Second Coming of Jesus Christ. It is the "voice of the seventh messenger" and the final Word-Message to our age.

## HEBREWS 13:8

**Think not that these things exalt a man, CHRIST ALONE IS EXALTED!** Brother Branham of himself could do nothing (John 3:27). It was Jesus Christ performing (through a humble prophet) the same works he did when He walked in human flesh upon this earth (Heb. 13:8). So look not at the man, but at the Message which he brought forth, for that Message will point you to the pure Jesus Christ, free from all denominational creeds and traditions. Did not the apostle Paul say, "Be ye followers of me, even as I also am of Christ," (1 Cor. 11:1; 4:16).

When you obey **Paul**, you are not following a man, but the Holy Spirit speaking through him. "And today," as one man wrote, "this man, William Branham, has had literally thousands of manifested vindications from God, and with his life containing all the other factors that make up the prophetic office, he ought to be received for what he is - he must be received for what he is. "Thus saith the Lord" in his mouth by the Holy Ghost, is absolutely no different from the "Thus saith the Lord" in the mouth of Paul, for it is the same Holy Ghost."

But would you have recognized Paul had you lived in his day? Or if you had lived in the days of Noah? Or Elijah? or Jeremiah? Would you have recognized them as prophets and heeded their Message? How about if you had lived in a remote part of Palestine and heard reports about somebody called Jesus who was performing mighty miracles? Would you have recognized Him for who He was, or would you have been like the Pharisees, who believed what God did in the past, but could not accept what God was doing in their own day! They even called Jesus "Beelzebub, the prince of devils". "Woe unto you scribes and Pharisees," cried Jesus, "hypocrites! Because ye build the tombs of the prophets and garnish the sepulchres of the righteous, and say, if we had been in the days of our fathers, we would not have been partakers with them in the blood of the prophets, wherefore ye be witnesses unto yourselves, that ye are the children of them which killed the prophets!" (Matt. 23:29-31).

So God has once again visited this last generation with a mighty prophet. A humble man, who desired neither fame nor wealth, who never failed to give every bit of the glory to the Lord Jesus Christ.

Briefly this essay have sketched his life, and briefly his vindication. Yet, this has not even touched yet on the Message which he brought forth, even though it is that Message that is most important. Now it is up to you to dig on these treasures. Books and tapes are available upon request, but you must be sincere to check it out, weigh the evidence, examine the Word, and then pray it through. If it is the Truth, God requires you to believe it.

## SEVEN VISIONS BY WILLIAM BRANHAM

**In the year 1933, God gave Brother Branham a continuous vision of seven major things** that must transpire before the Lord Jesus Christ would come again.

The first (1) vision was that he saw a dictator rising up in Italy that would invade Ethiopia. He saw **Mussolini** and his shameful end where the people turned on him, before it ever transpired in actual event.

The second (2) vision was shown to him by God where he saw a young Austrian named **Adolf Hitler** who would gain power in Germany and would lead the world into war, but that Germany would be defeated and Hitler would come to a mysterious end.

In the third (3) vision, he saw three great ISM's in the world: **Fascism, Nazism and Communism**: but that the first two would be swallowed up into the third one - Communism.

Then on the fourth (4) vision, he beheld the tremendous advances in **science** that would follow World War II. He saw an automobile looking like an egg that's being run not by humans but by remote control.

The fifth (5) vision showed him the horrible moral decay of the world, centering mostly around **women.** He saw women cutting her hair, smoking cigarettes, drinking, wearing pants and indecent clothing. (Remember these five things were shown to him in 1933, years before they occured).

In the sixth (6) vision, he saw a **beautiful, yet cruel woman rise in America**, dominating the land with authority.

And in the last (7) vision, he saw the land of America in smoldering ruins. As far as the eye could see there was no life, only craters and smoking piles of debris. He also saw Los Angeles, **California sank beneath the ocean caused by a major earthquake.** Then these visions faded away.

# WITNESSES TO THE BRANHAM MINISTRY

**The following are certified testimonies from well-known preachers and evangelists** from around the world concerning the ministry of **William Marrion Branham**:

**JAMES MORRIS** - "It was Branham, more than any other evangelist, who started the post-World War-II fundamentalist healing revival following his encounter with an angel on May 7, 1946. Word radiated in every direction that all manner of diseases and afflictions were healed instantly by the little Indiana preacher. Even cases of raising the dead were published." *(-The Preachers)*

**GORDON LINDSAY** - "Never had we known of any preacher calling deaf, mutes and blind people to pray for, and then to see those people delivered on the spot... a ministry that was beyond any that we had before witnessed." *(-The House that the Lord Built)*

**TOMMY OSBORN** - " God has chosen diverse and mysterious ways to reveal Himself to His servants especially those called for dispensational purposes as was Brother Branham`s call. In short, the man we know as William Branham was sent to demonstrate God again in flesh. *(-William Branham Memorial Service)*

**JACK MOORE** - "The most gifted of all the evangelists." *(-All Thingsare Possible by David Harell, Jr.)*

**ORAL ROBERTS** - "A humble devout man of God." *(-Healing Waters, July 1948)*

**F.F. BOSWORTH** - "When the gift is operating, Brother Branham is the most sensitive person to the presence and working of the Holy Spirit and to spiritual realities of any person I have known." *(-A Prophet Visits South Africa)*

**GEORGE EKEROTH** - "God called this humble man and anointed his ministry to a degree that within a few short years his name was known in the most remote jungle outstation. Wherever you would go in this world you would find that the name of this messenger has preceded you." *(-Introduction of Morris Cerullo's Book, Wind Over the 20th Century)*

**DAVID EDWIN HARRELL JR.** - "Most of the participants of the healing revival that erupted in 1947 looked upon Branham as its initiator. William Branham became a prophet to a generation. Night after night, before thousands of awed believers, he discerned the diseases of the sick and pronounced them healed. The power of a Branham service remains a legend unparalleled in the history of the Charismatic Movement." *(-All ThingsAre Possible)*

**THOMAS R. NICKEL** - "In Bible days, there were men of God who were prophets and seers. But in all the sacred records, none of these had a greater ministry than that of William Branham, a Prophet and Seer of God, whose photograph appears on the front cover of this issue of Full Gospel Men's Voice. Branham has been used by God, in the Name of Jesus, to raise the dead." *(-Full Gospel Men's Voice Magazine, February 1961)*

**JOSEPH MATTSON-BOZE** - "Sometimes I was scared because of the deep sense of holiness that penetrated the meeting, but I never failed to see the gift of God in operation through His servant and feel the warmth of love that flowed through his ministry." *(-The Herald of Faith, February 1966)*

## WILLIAM BRANHAM RESOURCES

**There are almost 1,100+ book-sermons** and **tape recordings** of **Rev. William Marrion Branham** available today for anyone interested in the End Time Message. Books, Tapes and MP3 CD's of Brother Branham's sermons can be ordered from **Voice of God Recordings, P.O. Box 950, Jeffersonville, Indiana 47131 U.S.A. Website: www.branham.org.** Other websites that feature the ministry of Brother Branham are as follows: **www.endtimemessage.info**; www.**spiritualbuildingstones**.info; www.**bibleway**.org; www.**dewitttabernacle**.org, www.**wmb1**.com; www.**nathan**.co.za; www.**inthedaysofthevoice**.com; www.**williambranham**.com; www.**spokenwordchurch**.com; www.**happyvalleychurch**.com. **The following tracts are free...**

> "If you want to see what day of the month it is, look on the calendar. If you want to see what day in the season it is of the Coming of the Lord, watch where Israel's setting. That's God's timepiece."
>
> -William Branham
> February 17, 1961

William Marrion Branham was one of the most influential Bible ministers of our time, considered by many to be the initiator of healing and charismatic revival that began in 1947. From 1947 until the time of his passing in 1965, the powerful ministry of William Branham was well known and considered unparalleled in the history of gospel meetings. The impact of the supernatural ministry of this one man was felt not only in North America, but also around the world.

(Read about William Branham's ministry on pages 464-469).
